The extent of land completely devastated by artillery fire in France was 3,306,350 hectares, comprising 4,329 communes. There were 794,000 dwellings destroyed or damaged, of which on Oct 10, 1922, about 408,000 had been reconstructed. Forestry is an important industry, the principal forests being those of the Ardennes, Compiègne, Fontainebleau and Orléans, consisting chiefly of oak, birch, pine, beech, elm, chestnut and the cork tree in the south. The vine is cultivated to a very great extent (69,250,000 hectolitres of wine were produced in 1922), as the names Bordeaux, Burgundy, Champagne, &c., universally testify. Cider making is also an important industry, and the production in 1921 amounted to 422,986,573 gallons. The live stock (1921) included 13,343,440 cattle, 9,599,560 sheep, and 5,166,080 pigs. The mineral resources include coal, pig iron, copper, lead, silver, antimony, and salt. Under Article 50 of the Treaty of Versailles, the coalfields of the Saar Basin are ceded to France for 15 years, at the end of which time the inhabitants are to decide by a plebiscite whether they will remain French, return to Germany, or become a self governing community. The coalfields about on Lorraine, and have an area of 217 square miles, with a population of 640,000, and they include the towns of Saarbrück (60,000), Saarlouis (16,000), and Merzig (20,000), on the River Saar. In 1921 the mines of France produced 30,000,000 tons, but in spite of the damage done to them it reached 25,000,000 in 1921, to which must be added over 3,500,000 tons from the Moselle basin and 9,500,000 tons from the Sarre. Payments already made for the reconstruction of war damage of all kinds amount to 98,000,000,000 francs, and it is estimated that another 100,000,000,000 francs will

be necessary to complete the cost of compensation and reconstruction. Under Annex V of the Treaty, Germany also undertakes to deliver to France 7,000,000 metric tons of coal annually for 10 years, and to make good any deficiency due to war causes in the production of coal in the departments of Nord and Pas de Calais. The most important manufactures are of metals watches jewellery, cabinet work, carving pottery, glass, chemicals, dyeing paper making, woollens, carpets, linen, silk, and lace. Glass manufacture and pottery are also important, and the sardine fisheries and the culture of oysters are a source of wealth.

DEFENCE.—The National Army of France consists of the Metropolitan Army, the Colonial Army, the Gendarmerie, and Republican Guard and of the partly native armies of Algeria, Morocco, and Tunis. These forces had a total strength on a peace footing (in 1914) of 633,733 all ranks. In the War of 1914-1918 over 20 per cent. of the French people were mobilised and 9,727,000 all ranks passed into the Armies of France (exclusive of troops from Algeria, Tunis, and Morocco). Of this total over 1,500,000 were returned as killed or missing. By law of 1919, the French Army will consist in future of 350,000 all ranks on a peace footing and of 1,300,000 on a war footing, with a reserve (including Territorials) of 2,000,000 all ranks. The French Navy was manned in 1920 by 56,000 officers and other ranks and consisted in 1923 of 6 Dreadnought and 3 Pre Dreadnought battleships, 6 cruisers, 5 light cruisers, 51 destroyers, and 47 submarines, 20 airships, and 58 aeroplanes.

ARMISTICE MONUMENT.—In the Forest of Compiègne is a *Carrefour de l'Armistice*, from which the *Clavière de la Victoire* leads to the Armistice Monument, unveiled Nov. 11, 1922. The monument marks the spot where the Germans signed the armistice terms presented by Marshal Foch, and bears the inscription *Ici le 11 Novembre 1918 succomba le criminel orgueil de l'Empire Allemand vaincu par les peuples libres qu'il prétendait asservir*.

EDUCATION.—The educational system is highly developed. *Central Administration* comprises (a) Ministry of Public Instruction, (b) Superior Educational Council, charged with the actual administration, (c) Consultative Committee (advisory), (d) Educational Bureaux and Inspecting Staffs, whose heads report direct to the Minister. *Local Administration* comprises (a) Territorial Academies, with inspecting staffs for all grades, and (b) Departmental Councils, presided over by the *préfet*, charged especially with primary education. By the Law of July, 1904, all congregational institutions are to be suppressed within 10 years, and many were at once closed, some re-opening under lay management. (i) *Primary*. *Secular comp and free*. Age 6-13. Schools include (a) infants, (b) lower primary, (c) higher do. Supplementary courses, and courses for adults. Lower and higher primary certificates granted. Numerous private courses are aided from local funds. Schools are for boys, for girls, or mixed (ii.) *Secondary*. State lycées, communal colleges, and many private establishments, 7 yrs. course, either (a) purely classical, (b) purely modern, (c) Latin and sciences, or (d) Latin and modern languages. Degree of Bachelor conferred on completion. For females, a similar organisation, course 5-6 yrs. *Servants' school* and the *Sorbonne Association* well known. (iii.) *Special Schools* are very numerous, many public institutions

being dependent on ministries other than that of Public Instruction. (iv.) *Universities* (State universities alone grant degrees, but numerous private faculties and private institutions further higher education) Aix, Algiers, Angers, Bordeaux, Caen, Clermont, Dijon, Grenoble, Lille, Lyon, Marseilles, Montauban, Montpellier, Nancy, Nantes, Paris, Poitiers, Rennes and Toulouse.

COMMUNICATIONS.—The principal rivers of France are the Seine, Loire, Garonne, and Rhône, the navigable waterways having a length of 4,214 miles with 3,263 miles of canals. The system of railroads in France is very extensive, they are almost entirely *concessés* and become State property after the expiration of the concession. The length of lines of general interest, inclusive of local lines, open for traffic on 31 December 1921 was 27,683 miles; the total receipts from passenger and goods traffic, &c. being £126,299,380 (£1 = 50 fr.). In 1922 there were 50 fatal accidents on French railways, with 96 killed and 544 injured. In 1921, 72 accidents with 137 killed and 656 injured and in 1920, 142 accidents with 122 killed and 1,064 injured. The length of telegraph wires is 128,129 miles, and of telephone lines 99,514 miles.

Shipping.—The gross tonnage of the French mercantile marine in 1922 was 3,560,000 gross tons, of which 366,000 gross tons were sailing vessels. Under the Armistice clause France has received 109 ex-German vessels (445,543 gross tons). During the year 1920 the tonnage of French and foreign vessels entering French ports amounted to 28,790,390 tons, of which 7,426,723 tons were French while the total clearings amounted to 16,947,025 tons, of which 5,291,395 tons were French. The chief ports are Marseilles, Rouen, Bordeaux, Le Havre, Calais, Boulogne, Dunkirk and Cherbourg. A bill was passed by the Chamber in 1921 for the canalisation of the Rhone, which will make the river navigable for 1,200 ton vessels from the sea to Switzerland and will also provide electric power and irrigation to the surrounding departments.

COMMERCE.—The principal imports are wool, cotton, coal, silk, oleaginous fruits and seeds, machinery, raw skins, cereals, timber, castor oil, copper, petroleum oils, coffee, and wines. The principal exports are cotton tissues, silk tissues, wool, woollen tissues, wines, smallwares, automobiles &c., silks, raw skins, millinery and artificial flowers, dressed skins, tools and metal goods, machinery, pig iron, butter, table fruits, refined sugar, brandy and liqueurs, fish, and cheese.

Alsace Lorraine — High Commissioner M Mirhan (1920). Alsace Lorraine formerly a part of the Holy Roman Empire, was ceded to France in 1648 at the Peace of Westphalia, and was ceded to Germany by the *Treaty of Frankfurt* (May 10 1871), after the Franco Prussian War. At the close of the War, 1914-1918, the Provinces were regained by France under the *Treaty of Versailles* (June 28, 1919). They embrace the fertile plain between the Rhine and the Vosges, and stretch beyond these mountains as far as Luxembourg. Wine tobacco hops, iron, and coal are among the leading productions, and the cotton industry is most flourishing. The area is 5,605 square miles, the population in March, 1921, was 1,709,749. Principal towns Strassburg (pop 166,767), Mulhausen and Metz.

Algeria — The three departments of Algeria—Algeria, Oran, and Constantine—form an integral part of France under a Governor General assisted by a Consultative Council. These departments lie between 4° 36' W to 6° 16' E longitude 30° 6' N to an undetermined S limit, about 30° N, covering an area estimated at 222,120 square miles with a population (1921) of 5,806,090 of whom 829 were Europeans and 4,976,262 natives. The revenue in 1922 was estimated at francs 707,047,499, and the expenditure at francs 707,326,774. The bulk of the trade is with France, the exports to France amounting in 1920 to francs 934,715,000 (total exports fr 1,355,372,000), and the imports from France to fr 1,291,005,000 (total imports fr 3,072,707,000). The exports consist mainly of wine, wheat and other cereals, sheep and oxen, skins fruits zinc and iron ores, olive oil, phosphates (372,019 metric tons in 1921), cork wood, esparto grass manufactured tobacco, and vegetables. The principal imports from the U K were coal and patent fuel, machinery, cotton oil, cotton tissues, tin plates, clothing, and prepared skins. Iron, copper, quicksilver, zinc, and lead mines are being worked. In 1919 there were 2,228 miles of railroad open for traffic, and in 1921 the number of ships engaged in foreign trade entering and clearing Algerian ports was 4,067, of a net tonnage of 7,625,122 tons. The principal

town is Algiers, the capital (population, 1921, 551,949), a most important coaling station and much frequented as a health resort. Other large towns are Oran, Constantine, Bône, and Tlemcen. Governor General, M. Théodore Steeg.

CAPITAL, Paris, on the Seine. Population (1921), 2,906,472, there are 82,127 houses and 1,249,366 families according to the census of March 1921. Fourteen other cities exceed 100,000 — Marseilles 586,341, Lyons 561,592, Bordeaux 267,409, Lille 200,952, Nantes 183,704, Toulouse 175,434, St Etienne 167,967, Strasbourg 166,767, Nice 155,839, Le Havre 163,374, Rouen 123,712, Roubaix 113,265, Nancy 113,226 and Loulou 106,331. Mulhouse, Amiens and Limoges exceed 90,000 and 30 others exceed 50,000. FLAG The "tricolour," three vertical bands, blue white, red (blue next to flagstaff).

FRENCH COLONIES

Colony &c	Area.	Population.
Indo China	257,000	18,000,000
Asia Minor	150,000	4,500,000
Africa	4,100,000	43,550,000
America	33,000	500,000
Oceania	10,000	100,000
Total	4,550,000	66,650,000

In ASIA—French India includes Pondicherry, on the Coromandel coast Chanderannagore, on the Hooghly Karikal, in the Cauvery delta, Yanam, in the Godavery delta and Mahé, on the Malabar coast—the total area being 267,700 square miles with an estimated population of 18,000,000. French Indo China comprises the possession of Cochin China and the four protectorates of Cambodia, Annam, Tonkin, and Laos. In 1898–9 the port of Kwang Chow Wan was also acquired on lease from China. The capital is Hanoi, in Tonkin, and the total area is 3,007,979 square miles, with a population (1922) estimated at 26,600,000.

In ASIA MINOR—The French mandatory sphere of Syria, Cilicia and Lebanon has a total area of about 150,000 square miles, with an estimated population of 4,500,000 (see also pp. 833–4).

In AFRICA—Algeria (see above) is an integral part of France. Morocco (see p. 809–10) is a French (and partly Spanish) protectorate.

Tunis (*Bay of Tunis*, Sidi Mohammed ed Habib, *accaded 1920*) has been a French protectorate since 1881.

It lies between Algeria and Tripoli, and extends southwards to the Sahara, with a total area of about 45,000 sq miles and an estimated population of 2,000,000, of whom about 600,000 are Berbers and 500,000 Arabs. The valleys of the northern region support large flocks and herds, and contain rich agricultural areas. In which wheat, barley, and oats are grown. The vine and olive are extensively cultivated. The principal minerals are coal, copper, lead, zinc and iron and phosphates and marble are also worked. The chief exports are phosphates, olive oil, wheat, esparto grass, barley, beans, blankets, sponges, and dates, the chief imports are textiles and other manufactures, iron, steel, machinery and provisions. Eighty per cent of the trade is with France and Algeria. Tunis, the capital, has a population of 230,000. Other towns are Sfax (84,000), Bizerta (30,000), Suse (30,000), Kairwan (22,000), Gabes (18,000) and Monastir (6,000). *French West Africa* extends from Mauritania to Dahomey, and has a total area of 2,509,732 square miles, and a population of 21,344,076. It consists of *Senegal* (74,000 sq miles, pop. 2,250,500), capital St. Louis. *Upper Senegal Niger* (304,000 sq miles), and the *Niger Military Territory* (533,000 sq miles), which have a total population of about 6,036,300. *French Guinea* (98,600 sq miles, pop. 1,737,350). *Ivory Coast* (126,100 sq miles, pop. 1,216,300) and *Dahomey* (38,000 sq miles, pop. 978,500), adjoining Dahomey is the French Sphere of the former German colony of *Togoland* (23,400 sq miles, pop. 800,000). While the hinterland of these colonies forms the *French Sahara*, which has an estimated area of 924,100 sq miles and a population of about 450,000. *French Equatorial Africa* consists of the *French Congo* (513,000 sq miles, pop. 9,000,000) and of the French Sphere in the former German territory of *Cameroon* (267,000 sq miles, pop. 2,750,000). *French East Africa* consists of the *Somali Coast* (46,300 sq miles, pop. 208,000) and of the large island of *Madagascar* (226,000 sq miles, pop. 3,253,500) with its dependencies (Nossi Bé, Sainte Marie, Réunion, and the Mayotte-Comoro Islands, and St. Paul, Amsterdam, and Kerguelen Islands). Agriculture and cattle raising are the principal industries, the minerals include gold, silver, iron, copper, lead, and zinc. The chief exports are gold, cattle, bark, manioc (for arrowroot), beans, hides, skins, fibre, rice, timber and rubber. The chief imports are cottons, metal manufactures, wines and spirits, coal, clothing, lime and cement. The capital, Antananarivo, has a population of 75,000, other towns are Tamatave (the chief port), Majunga, Diego-Suarez, Mananjary, Tuléar, Andoveranto and Vohémar. Off the south-east coast are the uninhabited islands of St. Paul, Kerguelen and Amsterdam. There is now direct communication across French and British territory in Africa, with posts on the Atlantic and Indian ocean.

IN AMERICA.—Off the south-east coast of Newfoundland are two small groups of islands, of which the largest are St. Pierre and Miquelon. In the West Indies Martinique and Guadeloupe, with Basse Terre, Marie Galante, Ile des Saintes, Petite Terre, St. Bartholomew, and St. Martin and in South America, Cayenne or French Guiana. The total area of French possessions in North and South America is 35,300 square miles, with a population of 428,850.

IN AUSTRALASIA.—New Caledonia (7,300 sq miles, pop. 50,500) is a large island with many dependencies, and the Society Islands (Tahiti, &c.) and other islands have a total area in the Pacific Ocean of 8,378 square miles, with a population estimated at 81,200. The New Hebrides are under joint Franco-British administration.

GERMANY

(Deutsches Reich)

President of the German Republic, Herr Friedrich Ebert, born, Feb. 4, 1870, assumed office, Feb. 12, 1919.

Ambassador in London, Dr. Friedrich Stamer, 9 Carlton House Terrace, S.W. 1
Consular Dept. of the Embassy, 21A Bedford Place, W.C. 1.

The area of Germany is approximately 172,270 square miles, with a population on Oct. 8, 1919 of 59,568,284, of whom 28,498,801 were males and 31,359,393 were females. The population on Dec. 1, 1910 was 64,925,993. Births in 1920 numbered 1,651,593 and deaths 985,235, births being 27 per 1,000 of population, deaths 15.9 per thousand.

Religious confessions in the present area were in 1910—Protestants 38,117,501, Roman Catholics 19,326,396, Jews 538,912, others 478,132. There are 43 large towns with over 100,000 inhabitants, and of these 29 are in Prussia, 4 in Saxony, 3 in Bavaria, 2 each in Baden and Hesse, 1 each in Württemberg and Brunswick, and three Hanse Towns.

At the outbreak of war, Aug. 1914, "Germany" was a Confederate League, bearing the name "German Empire," under the hereditary presidency of the King of Prussia, holding the title of "German Emperor."

By the *Treaty of Versailles* the "Reichsland" of Elsass Lothringen and the Saar coal basin (temporarily) were ceded to France, parts of Posen and West Prussia to the newly formed Republic of Poland, North Schleswig to Denmark, and Moresnet and Malmédy to Belgium. Plebiscites held in June 1920 in parts of East and West Prussia yielded majorities for Germany. A plebiscite to decide the fate of Upper Silesia, which was held under the Peace Treaty, resulted in division between Poland and Germany. Memel City with adjoining territory has been ceded to Lithuania.

The Colonial possessions of the German Empire extended over 1,035,086 sq miles in Africa, 95,470 sq miles in the Pacific, and 2,923 sq miles in Asia—a total of 1,234,399 sq miles, with a population estimated in 1914 at 15,000,000. By the *Treaty of Versailles* Germany renounced her overseas possessions, with all rights and titles.

therein, and the delegates to the International Council at Paris allocated Togoland and Kamerun to Great Britain and France German East Africa to Great Britain, German S W Africa to the Union of South Africa, the German Pacific possessions N of the Equator to Japan and those S of the Equator to Australia and New Zealand.

On Nov 9, 1918 the German Emperor abdicated, and the Government of the country was taken over by the Council of the People's Commissioners in Berlin. On Nov 11, 1918 Germany was granted an armistice and on June 28, 1919, peace was signed at Versailles. In Jan 1919, elections were held to a National Assembly on the basis of universal adult suffrage (male and female), and on Feb 11, 1919 the first President of the German *Versammlung* was elected at Weimar. Under the new Constitution of August 11, 1919, the federal legislature consists of a *Reichstag* representing the whole nation and elected by popular suffrage (male and female), with proportional representation, and a *Reichsrat* representing the separate States. The people possess the right of initiative and the referendum. Bills dealing with economical questions or social issues arising thereout must first be submitted to the new advisory Economical Council (*Reichs wirtschaftsrat*).

PRODUCTION AND INDUSTRY—Germany, up to the commencement of the War was becoming more and more a manufacturing country. In 1907 32.6 per cent of the population were supported by agriculture, 37 per cent by industry and mining 11.5 per cent by trade and communications. Of the total area in 1907, 78,622,140 acres were under cultivation, and 34,272,141 acres were woods and forests. The Live Stock (Dec 1, 1921) included 3,683,252 horses, 16,820,584 cattle and 18,779,223 pigs. Germany supported about nine tenths of her population by her own produce in 1914. The mineral produce was valued in 1912 at £592,250,000 and included 190,109,440 tons of coal, 87,232,084 of lignite and 28,607,003 of iron ore, potash, rock salt, lead ore gold and silver ore, graphite, asphalt, petroleum Epsom salts, boracic tin ore, quicksilver ore, antimony ore, cobalt ore nickel ore arsenic ore, manganese ore bismuth ore uranium ore, wolfram ore pyrites vitriolic ore, and alum ore are also worked. Crefeld Elberfeld Barmen Chemnitz, Augsburg, and the provinces of Westphalia and Silesia are the great centres of the textile industries. By law of 1919 and 1920, all coal, heavy iron and steel, potash and coal tar producing concerns were compulsorily fused into All German Syndicates governed by assemblies representing Producers, Traders and Consumers, with equal representation for Employers and Employed.

Under the stimulus of the falling mark exchange which favoured competition abroad and induced the home public to convert its depreciating currency into solid goods, industry has flourished almost uninterruptedly since 1919. Unemployment has been very slight, and in Sept 1922 touched the lowest figure recorded. Production of all industrial goods has recovered, but in most cases remains below that of 1913. Bankruptcies have almost disappeared. In 1913 bankruptcies totalled 9760, in the first half of 1923, 123. Currency reform or stabilisation is expected to cause a decline in industrial activity.

OLD AGE AND INFIRMITY INSURANCE—The German scheme of social legislation gives all subordinate bread winners in Germany a legal right to pecuniary subvention when unfitted for work through sickness, accident, premature old age. Insurance is compulsory. This National Insurance is based on mutual insurance and self administration. The Infirmary Insurance Act came into force Jan 1, 1900. The insured include all persons working for wages or salary as workpeople, artisans, journeymen apprentices, domestic servants, laundresses, dressmakers, sempstresses, housekeepers, chait women, over seers foremen, engineers, assistants, clerks and apprentices in merchants offices (excepting assistants and apprentices in chemists shops), schoolmasters, schoolmistresses, tutors and governesses, including foreigners working in Germany under these categories. Pensions for premature infirmity are given to insured persons when unfit for work. Old age pensions to all insured persons on attaining the age of 70, though still capable of work. A comprehensive project of reform of the State insurance legislation became law in 1911. The new law codified previous legislation, established new Insurance Authorities reduced working class influence in the Accident Insurance organisations, provided pensions for widows and orphans, and made other changes of importance. Another Bill extending Insurance benefits to private officials, clerical employees and others above the class of manual workers, became law in 1911. A Bill establishing Federal Unemployment Insurance for industrial workers (not farm labourers or domestic servants), clerks, actors and orchestra musicians, and a Bill providing a Federal Labour Exchange Organization, are before the Reichstag. The income limits within which social insurance is compulsory are being constantly changed owing to the currency depreciation. In late 1923 many social insurance organisations were reported to be in financial difficulties.

DEFENCE—By Article 156 of the *Treaty of Versailles* the German Military Forces, as from March 31, 1920, must not comprise more than seven divisions of infantry and three divisions of cavalry, a total force of 100,000 all ranks. By Article 181 of the Treaty the German Naval Forces must not exceed 6 battleships of the Deutschland or Lothringen class, 6 light cruisers, 12 destroyers and 12 torpedo boats. No submarine vessels are to be included in the naval forces, and all war vessels in excess of the above numbers are to be broken up or devoted to commercial purposes. Under the terms of the Armistice of Nov 11, 1918, the German High Sea Fleet surrendered to the Allies (Nov 21, 1918) and was interned in Scapa Flow, manned by German naval crews. It was scuttled by its crews in Scapa Flow, while in custody, on June 21, 1919. In consequence of this breach of the Armistice agreement by the German crews the Allies (Nov 10 1919) called upon the government to surrender 5 light cruisers, and certain floating docks, cranes, and dredgers, in addition to the previous naval surrenders. By Article 198 of the Treaty the armed forces of Germany must not include any military or naval Air Forces, and no dirigible balloons, aeroplanes, sea planes or flying boats.

COMMUNICATIONS—The total length of the Railroads at end of 1919 was 55,920 kilometres, of which all except 3,623 kilometres belong to the

Republic. The number of registered automobiles and motor cycles (July 1, 1921) was 90,350. Length of *Telegraph Lines* (1920) 223,300 kilo metres (length of wires 2,325,600 kilometres). telegrams handed in, 74,726,000 post offices, 36,497 telegraph offices 47,485 wireless stations, 156,1 telephone call stations 40,146 letters delivered, 4,550,000 cash on delivery orders 9,822 million marks money orders 15,055 million marks, telegrams despatched 74,726,000 telegrams received, 75,524,000. The number of employees in the service of posts, telegraphs, and telephones was 444,453. The State postal services were taken over by the Federal Government in 1920. In addition to some 6,000 miles of navigable rivers there are over 1,500 miles of canals and 1,600 miles of ship canals. At the outbreak of the War of 1914-1918 Germany ranked second to Britain in the list of maritime countries. On January 1, 1921 the Mercantile Marine consisted of 2,098 sea going steamers of 17½ register tons and upwards (4,380,348 tons gross register), and of 4,400 sailing vessels (447,870 tons gross register) number of seamen, 77,746. As a result of the War and of the Peace Treaty shipping in 1921 sank to 419,000 tons but there has since been a rapid recovery due mainly to native building, but partly to purchases from abroad. Finished new constructions of vessels exceeding 100 gross tons were in 1919 134,535 tons, 1920 241,085 tons 1921 509,064 tons 1922 575,264 tons. On December 31, 1922, shipping had increased to 2,175,959 tons. Recovery was helped by the establishment of eleven new yards during the War. The chief ports of Germany are Hamburg, on the Elbe Bremen on the Weser, Stettin on the Oder Königsberg, on the Pregel, Kiel on the Baltic (connected with the Elbe by the Kaiser Wilhelm Canal), and Lübeck on the Baltic. Kiel is being converted into a free port. Under the Peace Treaty Danzig became a free State, subject in its foreign affairs to the Polish Republic. Traffic in the chief ports has increased since the War at a great rate and now exceeds that of 1913. Arrivals at Hamburg were 1913 24,195,496 net tons, 1919 1,870,000 tons 1920 4,486,833 tons, 1921 9,532,801 tons, 1922 13,005,089 tons, first six months of 1923 7,517,312 tons against 6,927,350 tons in same months of 1913. Bremen shipping traffic in the first half of 1923 also exceeded that of before the War.

FINANCE—Under Articles 248-263 of the Treaty of Versailles the German Government undertook to pay the cost of the Armies of Occupation from Nov. 21, 1918, until they shall be withdrawn, the occupied area extending to the Rhine (with 'bridgehead' on the right bank) from Elten, on the Netherlands frontier, in the north, to the junction of the German-Lorraine frontiers, in the south. The amount of the reparations due by Germany under the Treaty was fixed in January 1921 (by the Financial Council of the Allies at Brussels) at 132 milliards of gold marks (£6,600,000,000) payable in bonds, to be redeemed by annual payments of a milliard gold marks, together with a sum equivalent to 20 per cent of German exports. Of the amounts thus payable the various shares from 1921-1929 were apportioned to France 52 ninety second parts, Great Britain 22 Italy 10 and Belgium 8 ninety seconds, from 1929-1932 the shares are varied to France 130 two hundred and thirtieth parts, Great Britain 55, Italy 25 and Belgium 20 two hundred and thirtieths, and for the suc-

ceeding 21 years France 196 two hundred and seventy six parts, Great Britain 65, Italy 30 and Belgium 24 two hundred and seventy six parts.

German federal Finances are in a state of complete chaos. Since the Armistice, Finances have been in close association with the depreciating mark exchange. The best period of post war Finances was reached in June, 1922 when over 70 per cent of Expenditure (including Reparations) was covered by revenue from taxation. In the second accountancy period of August 1922 only 27 per cent of Expenditure was covered. The fall in mark exchange and the consequent price rise rapidly increased the Expenditure, while receipts from taxes, railways and posts increased relatively slowly. As a result of this the mark collapsed to a complete disproportion between Expenditure and Revenue and current deficits had to be covered by increasing the Floating Debt of discounted Treasury Bills, against which the Reichsbank printed unsecured notes, thereby again depreciating the currency and reducing the value of the tax yield. The movements of mark exchange and the Debt accumulation have been as follows:

	Marks to the £	Total Debt. In Millions of Marks
Mar 31, 1914	20 43	4,918
Sept 30 1920	214	242,699
June 30 1921	280	292,639
June 30 1922	1,394	375,993
June 30, 1923	711,775	24,990,423
Sept 30 1923	723,187,500	45,844,781,444

The Reichsbank's note circulation rose from 2,503 million marks on Dec. 31, 1913 to 1,280,095 millions on Dec. 31, 1922 and 8,622,729,773 millions on Sept. 29, 1923. Only 64 milliards of the Debt is funded. Owing to the fact that the currency depreciated even more rapidly than the Debt accumulated, the gold burden of the Debt has decreased, being approximately £1,000,000,000 on June 30, 1921, £233,000,000 on June 30, 1922 and £7,000,000 on August 31, 1923. The Republic's Debt to the states incurred as compensation for the federalised railways had fallen on Sept. 30, 1923 to under £40

Budget 1923-24.

	Marks.
General Administration Ordinary Expenditure	731,955,751,000
General Administration Ordinary Revenue	731,955,751,000
General Administration Extraordinary Expenditure	84,597,763,000
General Administration Extraordinary Revenue	18,776,637,000
Adding 449,327 milliards estimated subsidies to cover state undertakings deficits, and the deficit on the separate Reparations Budget, the estimated total deficit was 621,661 millions. This Budget will have no resemblance to the realised Budget, a deficit exceeding 250 billions having been incurred in the first five months of the Financial Year, April 1923—March 1924.	

German Trade

	1923.	1922.
Total Imports	12,614 mill gold marks	6,500 mill. gold marks.
Total Exports	20,891 mill gold marks.	3,970 mill gold marks.
Imports from U.K.	5,000,000,000	5,420,000,000
Exports to U.K.	80,411,000	26,224,000

GERMAN FEDERATED STATES

PRUSSIA

GOVERNMENT (April 28, 1921)

President, Herr Braun
Interior, Herr Severing
Finance, Herr Richter
Agriculture, Herr Wendorff
Trade and Commerce, Herr Siering
Instruction and Worship, Herr Boeltz
Minister of Justice, Herr am Zehnhoof

The Republic of Prussia comprises the larger portion of Germany, with a total area in 1919 of 113,750 sq miles and a population on Oct 8, 1919 of 36,004,572 (Saar district excluded)

Of the total population 17,550,644 were males and 18,453,668 females. The number of births in 1921 was 1,001,473 against 1,009,500 in 1913. The number of deaths in 1921 was 509,870 against 656,490 in 1913. Marriages were 468,107 against 323,709. The surplus of births over deaths in 1921 was 438,897 or 11.29 per 1000 inhabitants.

Prussia possesses a large number of navigable rivers intersecting the country—viz., the Pregel, Oder, Elbe, Weser and Rhine. The coasts of the Baltic and North Seas form a number of gulfs and bays. The principal mountains are the Harz and the Giant Mountains, the latter reaching an altitude of 5,255 feet. The forests are extensive, occupying an area of 18,053,000 acres, chiefly consisting of fir. Minerals consist of coal, iron, copper, lead, potash, alum, nitre, zinc, cobalt, sulphur, nickel, arsenic, baryta, amber, agate, jasper, onyx, &c., and to a small extent, silver. Salt (from the brine springs of Prussian Saxony) is abundant. Metallic ores, coal, salt, precious stones belong partially, and amber totally, to the Crown. Agriculture and the rearing of cattle are the industries employing the largest number of persons, but Prussia has long ceased to be a mainly agricultural State. Wheat, rye, oats, barley, peas, millet, rape seed, maize, linseed, flax, hemp, tobacco, sugar beet, hops, &c., are extensively cultivated. Prussia's manufactures comprise practically all branches. The cotton works are extensive, and there are numerous manufactories of silk, woollen, mixed cotton and linen fabrics, including shawls, carpets, &c., and woollens, with leather, earthen ware, glass, paper, and tobacco manufactures, as well as metallurgical works of great importance and large output. Brewing is a business of great importance.

	Marks
Revenue (Estimate) 1921-22	16,776,716,736
Expenditure do	16,776,716,736
Total debt, 1920	5,900,000,000

The whole of the old funded Debt of Prussia has been taken over by the Republic under the arrangement for transfer of the Prussian State Railways.

CAPITAL, Berlin on the Spree. In 1920, by fusion of suburban municipalities and of some adjacent rural communes, was created Great Berlin with a population of 3,803,770.

Other largest cities are Cologne, on the Rhine (633,904), Breslau, on the Oder (528,260), Essen, on the Ruhr (419,897), Frankfurt, on the Main (433,000), Düsseldorf, on the Rhine (407,338), Hannover, on the Leine (392,805), and Dortmund on the Emscher (399,086).

BAVARIA

Minister President, Dr. von Knilling

The Republic of Bavaria is divided into two unequal parts. The eastern portion, comprising eleven twelfths of the whole, is situated between 47° 16'—50° 34' N lat. and 9° 01'—13° 50' E long. the western part forming the Palatinate on the left bank of the Rhine. The total area is 29,486 square miles, and the population (in 1919) 6,108,703. The rivers are the Danube, Rhine, Main, Lech, Isar and Inn. The Bavarian forests are extensive, covering nearly a third of the country. The soil is highly productive, wheat, rye, oats and barley being the chief products. Buckwheat and maize are also grown and tobacco is one of the staple articles. Wine is produced in the Palatinate, in Lower Franconia and in Middle Franconia. The hop plant is most extensively cultivated. Many important manufactures are carried on. The brewing of beer is carried to great perfection. The chief imports are sugar, coffee, woollens, silks, stuffs, drugs, hemp, cotton, tobacco, and flax. The chief exports are timber, grain, wine, hops, beer, leather, glass, jewellery, &c. The Thuringian State Save Coburg Gotha was in incorporated in Bavaria in 1919.

CAPITAL, Munich, on the Isar. Population (1919) 630,711. Other large towns are Nürnberg, N W of Munich (353,208), and Augsburg, on the Wertach, Lech (154,555).

SAXONY

The Republic of Saxony has an area of 5,856 English square miles with a population (1919) of 4,663,298. More than one half of the surface is arable and has always been in a high state of cultivation producing the usual cereals and leguminous plants, with rape, buckwheat, flax and fruits. The forests supply timber of excellent quality. Minerals are rich and abundant (coal, silver, tin, bismuth, cobalt, iron, zinc, lead, nickel, arsenic, &c., besides marble, porcelain earth, and various gems). Special manufactures of Saxony are—Machinery, cottons, worsted yarns, soft wool tissues, carriages, furs, clothing, jute, furniture, stuffs, hosiery, gloves and other knitted goods, laces, embroideries, curtains, paper, wood and straw pulp, bottle glass, musical instruments, chocolates, sweets, cigars and Meissen porcelain. The imports are chiefly corn, wine, salt, cotton, silk, flax, hemp, wool, coffee, tea, &c. Its chief town, after the capital, is Leipzig (pop. 604,386) the great book market, with, next to those of Berlin and Munich, the most frequented University of Germany (having 5,925 matriculated students in 1921-22). Plauen (pop. 104,918), and Chemnitz (pop. 303,775), the Manchester of Saxony.

WÜRTTEMBERG

The Republic of Württemberg has an area of 7,534 English square miles, and a population (in 1920) of 2,518,773, of whom 30 per cent are Roman Catholics. It possesses rich cultivated fields, orchards, gardens, and hills.

covered with vines, the forest, grain, and pasture land being nearly equally distributed throughout. Spelt, wheat, rye, oats barley, hemp, hops, potatoes, beans, maize, and turnips are the principal agricultural products. The minerals, consisting chiefly of salt, iron, granite, limestone, ironstone, freiclay, &c, abound in the kingdom, mineral springs are also numerous. The principal rivers are the Neckar and the Danube. The manufactures generally are linen, woollen and cotton fabrics, carpets, paper, leather, gun powder, firearms, tobacco, iron and steel goods, pianos, clocks, pottery, cabinet work, &c. There are also many oil mills, breweries, and brandy distilleries. The principal exports are grain, cattle, wood, gunpowder, firearms, pianos, clocks, salt, oil, leather, woollen, hosiery, cotton and linen fabrics, staves, beer, wine, &c.

MINOR STATES

Baden, separated by the Rhine from France (Alsace) and Switzerland has an area of 5,819 square miles with a population (1919) of 2,208,503. A great part of the surface is mountainous and covered with forest trees, including the Schwarzwald (Black Forest) and the Odenwald, but more than three fifths of the total area is under cultivation, corn, wine fruit, potatoes, tobacco and hops being the chief agricultural products. The principal manufactures are cigars, cotton and silk stuffs, brushes, jewellery and trinkets, clocks, chemicals, paper and machinery. More than half the population are Roman Catholics. Capital, Karlsruhe, pop (1919) 135,051. Other large towns are Mannheim (229,576), Freiburg (87,946), Pforzheim (73,839), and Heidelberg (69,806).

Land Thuringen. The seven Thuringian States, Saxe-Weimar-Eisenach, Saxe-Meiningen, Saxe-Altenburg, Schwarzburg-Rudolstadt, Schwarzburg-Sondershausen, Reuss-Greiz, and Reuss-Gera, have been constituted into a single state under the title of Land Thuringen, with an area of 4,541 square miles, a population of 1,508,025, and two seats in the Federal Reichsrat. In size Land Thuringen is sixth among German states. The new state is governed by a 'Volksrat', Capital Weimar (37,333).

Hesse, in the West Centre consists of Northern and Southern portions, nearly equal in size, on either side of the Main River with a total area of 2,068 square miles and a population (1919) of 1,200,988, of whom more than half are Protestants. The country is mountainous but fertile, and agriculture is flourishing. Capital Darmstadt, pop (1919) 82,367. Other large towns are Mayence (Mainz) at the confluence of the Main and the Rhine (107,930), Offenbach (75,580), Worms (44,285) and Giessen (33,402).

Mecklenburg-Schwerin, between the Elbe and the Baltic, has a total area of 5,068 square miles, with a population (1919) of 657,330. Agriculture and stock raising are the principal industries, the Mecklenburg breed of horses being famous. The chief manufactures are bricks and machinery. Capital, Schwerin, pop (1919) 45,645.

Oldenburg, on the North Sea, between the estuary of the Weser (at Bremen) and the Prussian province of Hannover, has detached territories in Lübeck (between Holstein and Mecklenburg) and Birkenfeld (Rhine Province of Prussia). The total area is 4,479 square miles,

with a population (1919) of 517,965. The chief industries are agriculture, bee keeping and stock raising, the principal manufactures are brewing and distilling, tanning, tobacco and corks. Capital, Oldenburg, pop (1919) 38,440.

Brunswick, 1,228 square miles, pop (1919) 480,599. In Northern Germany. Capital, Brunswick, pop (1919) 139,539.

Anhalt, 906 square miles, pop (1919) 231,458. In Central Germany. Capital, Dessau, pop (1919) 57,658.

Lippe, 470 square miles, pop (1919) 154,318. Capital Detmold (25,301).

Mecklenburg-Strelitz, between Mecklenburg-Schwerin, Pomerania and Brandenburg, has a total area of 1,130 square miles with a population (1919) of 106,394. Chief industries are agriculture and wood products. Capital Neustrelitz, pop (1919) 11,246.

Waldeck, 438 square miles, pop (1919) 55,999. Capital Arolsen (2,793).

Schaumburg-Lippe, 230 square miles, pop (1919) 46,357. Capital, Bückeburg (6,745).

The **Free Hanse Towns** comprise the three cities of Lübeck, on the Trave (area 115 square miles, pop 120,568), Bremen, on the Weser (area 99 square miles, pop 311,866), and Hamburg, on the Elbe (area 160 square miles, pop 1,250,259). Each has a small rural territory and has full Federal independence, with a Council of State (under the Presidency of a Burgo-master).

GREECE (Hellas)

King of the Hellenes, George II, born July 7,
 1890, succeeded to the throne, Sept. 27, 1922 (on
 the abdication of his father King Constantine).

THE MINISTRY

Prime Minister & Min. of War, Col S Gonatas
Justice, G Kophinas (*acting*)
Interior, Col L Sakellaropoulos (*acting*).
Marine, Capt K Voulgaris.
Finance, G Kophinas.
Foreign Affairs, A Alexandris.
Education, A Hadjikiakos (*acting*)
National Economy, A Hadjikiakos
Refugees, Dr A Doxiades
Communications, Col L Sakellaropoulos.
Hygiene, Dr A Doxiades (*acting*).
Agriculture, Dr A Doxiades (*acting*)

Envoy Extraordinary and Minister Plenipoten-
tary in London, Monsieur D Caclamanos
Legation, 52 Upper Brook St, W 2
Counsellor, M Constantine Collas
Secretary, M K Diamantopoulou
Consul General, M S Constantinidis (*acting*),
 36 Gordon Square WC 2

A maritime Kingdom in the south east of
 Europe, bounded on the N by Albania, Yugo
 Slavia and Bulgaria, on the S and W by the
 Ionian Sea and on the E by the Aegean and
 Turkey, with an estimated area of 42,000 sq
 miles and an estimated population (1922) of
 about 6,800,000.

Government—Greece became a kingdom in
 1830, after a successful insurrection against the
 Turkish government to which the country had
 been subjected since the 15th century. The
 legislature consists of a Chamber of Deputies (or
boule) elected for 4 years by universal manhood
 suffrage, and of a Council of State. Members of
 the legislature are paid 4,000 *drachmas* annually.
 At the outbreak of the Great War the sympathies
 of the reigning house of Greece appeared to
 be with the Central Powers, but under the
 influence of M Venizelos the Kingdom eventually
 entered the War on the side of the Allies, and
 King Constantine left the country (June 11 1917).
 King Alexander, who acceded to the throne, died
 from the effects of a monkey bite Oct 25, 1920.
 The crown was offered to his younger brother
 Paul, a Regency being meanwhile proclaimed
 under Admiral Coundouriotis. The November
 elections drove the Venizelists from office and
 the Regent, having admitted M Rallis to the
 Premiership, was called upon to resign. He
 was succeeded by Queen Olga, until a plebiscite
 was taken, and King Constantine was thus
 restored to the throne in December 1920. After
 the disastrous campaign in Asia Minor in Sept.
 1922, a bloodless revolution caused the abdication
 of King Constantine in favour of his eldest son

Prior to the Balkan Wars of 1912-13 the area
 was less than 25,000 sq miles, the addition of
 portions of Macedonia and Epirus, Crete (2,950 sq
 miles, pop 336,151), and certain Aegean Islands
 increasing the area to 43,522 sq miles. During
 the War of 1914-1918 Greece eventually declared
 for the Allies against the Central Powers, and
 her territories were increased by the occupation
 of Thrace (including the monastic republic of
 Mount Athos), and the islands of Imbros and
 Tenedos. Under an arrangement with Italy, to
 come into effect after the ratification of the
Treaty of Stres, the Dodecanese (12 islands)
 were surrendered by Turkey, and these were to
 be handed over to Greece by Italy with the
 exception of Rhodes for which a special arrange-
 ment was made. This arrangement was, how-
 ever, repudiated by Italy, and the fate of the
 island is in abeyance. Greece also received
 under the Treaty a mandate for the occupation
 and administration of the town and district of
 Smyrna, but military operations by forces of
 the Angora Government under Mustapha
 Kemal Pasha, recovered the mandated region in
 Sept. 1922, the Greek forces being annihilated
 and Smyrna was evacuated on Sept. 8, 1922 and
 that part of the Greek population of Asia Minor
 which escaped massacre by the Turks took
 refuge in Greece. By the *Treaty of Lausanne*
 (1923) Greece lost Eastern Thrace (that part
 lying E of the Maritza river) and the islands of
 Imbros and Tenedos which were retroceded to
 Turkey. The country is thus composed of a
 continental portion (the southern part of the
 Balkan Peninsula), and of islands in the Aegean,
 Mediterranean, and Ionian Seas. The surface
 is nearly all mountainous the coasts are
 elevated, irregular and deeply indented.

Production—Agriculture is the principal
 industry and employs more than half the popu-
 lation. The most important of the fruit trees are
 the olive the vine orange lemon fig, almond,
 citron, pomegranate and currant-vine. The
 principal minerals are silver, lead, zinc, emery,
 copper, magnesium sulphur, salt and marble.
 The chief manufactures are smelting, textiles,
 and shipbuilding. The imports are cotton and
 other manufactures corn timber cattle, hides,
 sugar, salt fish and coal. The exports consist of
 wine olives olive oil, tobacco currants, figs,
 cognac, hides lead iron ore, magnesite, iron
 pyrites chrome ore emery, marble and sponges.
 The imports in 1920 were, from Gt Britain,
 320 million *drachmas* U.S.A. 287 million Italy
 125 million France 109 million and other
 countries 333 million. The exports were to
 U.S.A. 40 million Gt Britain, 37 million, Italy
 26 million France, 20 million, and other
 countries 178 million.

Defence—Service in the Army is universal
 and compulsory between the ages of 21 and 57.
 Both the land and sea forces were reorganised
 during the War of 1914-1918 and about 150,000
 all ranks fought with the Allied Armies. The
 Navy consisted (July, 1919) of 6 ironclads
 1 modern cruiser, 14 destroyers, 6 torpedo-boats,
 and 2 submarines.

Education is free and compulsory, maintained
 by local taxation supplemented by State grants.
 Secondary education is somewhat backward,
 particularly in the country districts. The Uni-
 versity at Athens is of some repute.

Finance—The debt in 1912 was 1,040,000,000
drachmas, and the Balkan Wars of 1912-13 added
 354,950,000 *drachmas*, the Great War added

1,028,000,000 *drachmae*, and subsequent military operations to March, 1921, were responsible for 1,776,140,000 *drachmae*

Communications—There were (1919) 1,400 miles of railroad open for traffic. There is a ship canal cutting through the Isthmus of Corinth for ships up to 1,500 tons. The post offices (in Old Greece) number 1,150, dealing with 36,000,000 postal packets, telegraphs, 4,951 miles. The mercantile marine consists of 110 sailing vessels above 100 tons capacity and 208 steamers (449,184 tons). The principal harbours are the Piræus (port of Athens), Syra, Patras, Salonica, Volo, Corfu, Kalamata, Laurium, Cavalla, and Canea (Crete).

República de Guatemala.

President (1922-1926), José María Orellana,
assumed office Dec. 9, 1921
Min of Foreign Affairs, Señor Don Roberto
 Lowenthal

Minster in London,
Consul in London D Bowman, 11 Queen Vic
 toria Street, E C 4

Guatemala, the most northerly of the Republic States of Central America is situated in N lat from 13° 45' to 17° 45', and in W Long from 88° 12' 49' to 92° 23' 43' and comprises an area of 42,456 square miles and a population in 1921 of 1,600,535. The Republic is divided into 22 departments and is traversed from W to E by an elevated mountain chain, containing several volcanic summits rising to 13,000 feet above the sea. earthquakes are frequent and the capital was destroyed by an upheaval in Jan., 1918. The country is well watered by numerous rivers. The climate is hot and somewhat malarious near the coast but very temperate and healthy in the higher regions. About 600 miles of railway were open for traffic in 1921. There were 4,543 miles of telegraph working in 1921. The chief ports are San José de Guatemala and Champerico on the Pacific and Livingston and Puerto Barrios on the Atlantic side. The principal export is coffee other articles being bananas, sugar, timber, *chicle* (chewing gum), hides and beans. Spanish is the language of the country.

HAITI.

(République d'Haiti.)

President, M Louis Borno, *assumed office*
 May 15, 1922
Foreign Affairs, Camille Léon £4,000

Minister in London, Jules Lizaire
Consul, J G Dalzell, 78, Victoria Street, S W 1
 The Republic of Haiti is the western or French
 portion of the island of San Domingo, which,
 next to Cuba, is the largest of the "West India"
 Islands

The island was visited on Dec 6, 1492, by Christopher Columbus, who named it *Esparnola*, the native name being *Haiti* (mountainous) or *Quisqueya* (vast). The Spaniards explored the island and almost exterminated the 2,000,000 native Indians, whom they replaced with African negroes. By the Treaty of Ryswick (1697) the western portion of the island was ceded to France and in 1803 the territory was abandoned under the aboriginal name of Haiti. In 1822 the rule of the Haitian President was extended over the whole of the island, the eastern portion having declared its independence of Spain in 1821. Since 1844 the eastern portion has formed a separate republic (see Dominican Republic).

The area of the republic is 10,800 square miles, with a population estimated at 2,500,000. The mountains are richly and heavily timbered and susceptible of cultivation nearly to their summits. It is probably the most fertile spot in the West Indies whilst its harbours, especially Port-au-Prince, offer considerable facilities to foreign trade. The principal productions are coffee, logwood, cocoa, cotton, hides, sugar, honey, gums and oils, these being the chief exports. It is said to contain mines of gold, silver, copper, tin and iron. Its commercial prosperity has been almost annihilated by repeated revolutions. In November, 1915, both Houses of the Congress ratified a treaty with the U.S.A. establishing a virtual protectorate over the Republic, which came into effect in May, 1916. An armed Constabulary, rural and urban, under American officers, has been constituted, and a coastguard service is attached. On Nov. 27, 1920, some prominent Haytiens met and formed the "Union Patriotique" an association for raising funds by public subscription all over the country for the purpose of sending delegates to plead the cause of the Haytian people. It was arranged to send a delegation of three members to New York and Washington, and on February 6, 1921, two of them left the third following two months later. It appears that the Haytian cause has found supporters there and as a result of the visit of this delegation a Senatorial Commission of enquiry visited the island (Nov.-Dec. 1921), and in their subsequent report advised the U.S. Government to maintain the occupation and to appoint a High Commissioner. The Constitution was amended in June 1921, and under its provisions the President is elected for four years. The principal foreign trade is carried on with the United States, Great Britain and Germany. The principal articles imported from Great Britain in 1921-22 were piece goods, jute bags, hard ware, and agricultural tools. French is the language of the country.

HONDURAS

(Republica de Honduras)
 President (1920-1924) General Rafael Lopez
 Gutierrez, assumed office Feb. 1, 1920

Consul General in London, A. B. Ryde, 4 Lloyds
 Avenue E.C. 3.

The Middle State of Central America, stretching in N lat between 13° 10' and 16°, and W long between 83° 10' and 88° 40' containing 44,775 English square miles with a population estimated at 673,408 (1922).

Christopher Columbus landed at Cape Honduras in 1502 and in 1524 the country was settled by the Spaniards. In 1525 Hernando Cortes founded the city of Puerto Cortes and from 1539 to 1821 the country formed part of the Captaincy General of Guatemala. From 1821 to 1839 Honduras was included in the Confederation of Central America.

The Republic of Honduras has a coast-line of nearly 400 miles on the Caribbean Sea, chief ports Truxillo, Puerto Castilla, Puerto Cortes, Omoa, Roatan, Tela and La Ceiba but only about 40 miles on the Gulf of Fonseca on the Pacific side, chief port Amapala. (NOTE—Amapala is on Tigra Island, port on mainland is San Lorenzo, 3 hours in gasoline launch from Amapala. From San Lorenzo by auto to capital, Tegucigalpa 88 miles, good road 5 1/2 hours. Road from Tegucigalpa to N coast now reaches Comayagua and the journey can be made to Comayagua in 4 hours. From there to end of railroad, 3 to 4 days by mule. A through road for automobile traffic is completed from Comayagua to Pito Solo, at S end of Lake Yojoa, and work is in progress for the extension of motor traffic over the road from Jaral, at the north end of the lake, to the railway terminus at Portorillos, thus completing direct inter-oceanic transport communication. When this route is open New York will be only 7 days from Tegucigalpa.) The country is mountainous being traversed by the Cordilleras. The soil is very fertile, the products being bananas, mahogany, fruit, cattle, sugar, rubber, rice, tobacco, coffee, indigo, sarsaparilla, hides and skins, indiarubber, cedar, fustic, rose, henequen and Lima wool (Kapok). There is an immense amount of uncultivated land. The number of cattle in 1920 was approximately 500,000. The forests are extensive, but there is a lack of communications and transport. Its mineral wealth is great. In 1921 there were 895 kilometres of railway open, all on the North Coast. The language of the country is Spanish.

	1920-21	1921-22	1922-23
Revenue	£836,000	£851,491	£822,372
Expenditure	571,000	580,546	580,372
* Foreign Debt	5,398,570	5,398,570	5,398,570
+ Internal Debt	533,297	656,590	576,400
Exports	2,083,418	2,387,447	2,246,601
Imports	3,569,228	4,120,075	3,801,065

* The external debt remains the same. No interest has been paid since 1892 and arrears of interest amounted on Jan. 1, 1923 to nearly £23,000,000, the Government propose to pay off £1,200,000 in annual instalments of £40,000.
 † Bearing no interest.

Ninety per cent. of the foreign trade is with U S A. American money is legal tender at 100 per cent. (s to 2).

CAPITAL Tegucigalpa. Pop (1921), 40,000. La Esperanza and Santa Rosa have each about 10,000 inhabitants.

FLAG Three horizontal bands, blue, white, blue (with five blue stars on white band).

Hungary was declared a Republic on Nov 17, 1918, its territories being decreased from the area of the former Kingdom of Hungary (which was united to the Austrian Empire by the identity of sovereigns) through the transfer of Transylvania to the Rumanians and of Croatia and Slavonia to the new Yugo Slav Kingdom (qv) and of Slovakia and Ruthenia to Czechoslovakia (qv). The area of Hungary is about 36,179 sq miles, with a population (almost entirely Magyar) estimated (1920) at 7,482,000. The political neighbours are Czechoslovakia on the N, Yugo Slavia on the S, Rumania on the E, and Austria on the W.

On the declaration of Republican institutions in 1918 Count Karolyi assumed office as Provisional President, but on March 21, 1919 Count Karolyi resigned and was succeeded by a Bolshevik administration with a "Soviet (Workmen's Council) in which Bela Kun (or Cohen) was the dominant personality. This administration was driven out of power by the successes of the Rumanian military forces (which invaded Hungary and occupied Budapest) and was followed by a Socialistic Government under Julius Feidel (Aug 1 1919). Six days later the Socialistic Government was superseded by an administration appointed by the Archduke Joseph, who accepted office as Provisional President, Aug 7, 1919, but resigned in consequence of the protests of the Supreme Council in Paris.

On March 21 1920, Admiral Nicholas von

Horthy of Nagyványa was appointed Governor of Hungary by vote of the National Assembly, which gave him royal rights with the exception that his approval is not necessary to the promulgation of laws made by the National Assembly.

In 1921, the ex king Karl made two efforts to regain the throne, remaining in the country from March 26 to April 5, and from Oct 21 until removed under escort. On each occasion the Hungarian Government was informed that a Hapsburg restoration would not be tolerated by the European Powers. In August 1921 the Serbians evacuated Baranya which they had occupied since the Armistice. Immediately afterwards Hungary should have handed over the *Burgenland* to Austria, but was prevented from so doing by a band of Hungarian irregulars who prevented the entrance of the Austrian authorities. The Austrians declined to use force, and the questions at issue have been referred to the mediation of Italy.

All religions are tolerated the greater number of Magyars are Roman Catholics, but there is a large Protestant minority. The parceling out of the great estates, which was forcibly attempted during the Karolyi régime has been continued to a small extent, but on an economic basis and at the initiative of the owners. A land reform bill aiming at the forced sale of the properties exceeding a given area has been passed.

A single chamber National Assembly (introduced Jan 4 1920 in place of the Upper and Lower Houses of the former Parliament) is elected by universal suffrage. The question of providing a Second Chamber from a reformed House of Magnates (which ceased to function after the revolution) is under discussion.

The greater part of the area of present Hungary consists of the Alföld or Great Plain, parts of which may be considered as among the most fertile for agricultural purposes in the world, producing grain of excellent quality and supporting a number of horses cattle and swine. The mountainous districts having been ceded to surrounding states by the Peace Treaty Hungary has lost the greater part of the forests and mines which formerly contributed so largely to the national wealth.

Prior to the war Hungary imported merchandise to the value of approximately £85,000,000, and exported approximately £75,000,000 annually. In the year 1916 the imports amounted to about K 3,280,000,000 and the exports to about K 2,650,000,000. Taking an average exchange equivalent, based on Zurich quotation for the year 1916, these amounts may be taken as £80,500,000 and £66,250,000 respectively. There is a British Hungarian Chamber of Commerce at Budapest, and there are openings for trade in chemicals machinery, hardware small tools, iron mill products, leather, and textiles. Hungarian (or German) is the language in which business letters should be written.

No part of Hungary touches the sea. The length of navigable rivers is 687 miles there are about 5,000 miles of railways and 5,800 miles of telegraph in the present Kingdom.

The pre war revenue of Hungary was about s 250 million *Korona* (£93,750,000) whereas the estimated revenue according to the Budget for the year 1921 amounts to 20,276,000,000 *Korona* (£17,000,000). The public debt stood at 6,000,000,000 *Korona* (£50,000,000), and its present amount may be estimated at about

See, 000,000,000 *Korona*, but this is dependent on exchange conditions and subject to decisions that may be given by the Reparations Commission, which has not yet begun to sit in Budapest.

CAPITAL Budapest on the Danube has a population of 1,184,616 (1921). The other large towns are Szeged (110,000), and Debreczen (102,000), there are 34 other towns with a population over 50,000.

ICELAND

(Island)

King Christian X. (see Denmark)
Presidents of Althing, H. Stenstien, Benedikt Sveinsson, Magnus Kristjánsson
 Iceland is a large, volcanic and treeless island in the North Atlantic Ocean, extending from 62° 53' to 66° 33' N lat. and from 13° 22' to 24° 25' W long with an estimated area of 40,497 square miles or greater than that of Ireland. The population was 94,866 in 1921.

An Act for the creation of a Danish Icelandic Federal Constitution, Denmark and Iceland to be free and independent States under the same Sovereign, came into force on Dec. 1, 1918 but since the constitution granted in 1915 the assembly (Althing) had been more or less independent of the Government at Copenhagen in internal questions. The principal products of the island are sheep, cattle, ponies and fish and the imports consist of almost all the necessities of life, the chief items being grain and meal, sugar, coffee, salt, cotton goods, tobacco, spirits, hardware, and timber. Total imports (1922) estimated, £1,698,215 exports £1,733,928. Iceland is in direct telegraphic communication with Great Britain.

Chancellor, Signor Giuseppe de Grossi.
Archivist, Signor Ugo Catani
Consul, Signor G. A. Pirelli, 144 Queen Victoria Street, E.C. 4.

Vice Consul, Cavaliere P. Righetti.

A Kingdom in the South of Europe, consisting of a peninsula, the large islands of Sicily and Sardinia, the island of Elba, and about 70 minor islands (with certain dependencies hereinafter noted). It is bounded on the N. by the Republics of Switzerland, Germany and Austria, on the S. by the Mediterranean on the E. by the Adriatic and by the League of Nations territory of Fiume, Istria, &c. and on the W. by France and the Tyrrhenian and Ionian Seas. The total area of the kingdom of Italy in 1914 was 110,623 sq. miles, and by the *Treaty of Versailles* (June 28, 1919) Italy gained from Austria Hungary the Trentino (about 4,000 sq. miles) and Trieste (with about 1,000 sq. miles of the Adriatic Sea board). The Vilayet of *Roma* (40,000 sq. miles, pop. 1,000,000) is within the Italian sphere of influence.

The total area of the Kingdom of Italy was estimated (Jan. 1920) at 120,450 square miles with a population of about 38,500,000. There is a large settled and floating population of Americans and English.

The Italian peninsula is traversed throughout its length by the chain of the Apennines, the Alps form its northern limits, dividing it from France, Switzerland, Germany, Austria and Yugoslavia. *Mont Blanc* (15,782 feet), the highest peak of the Alps is in the French Pennine Alps, but within the Italian borders are *Monte Rosa* (15,217 feet) and several peaks from 12,000 to 14,000 feet. The chief rivers are the Po, the Adige, the Tiber, and the Arno.

GOVERNMENT—Italian unity was accomplished under the House of Savoy, after an heroic struggle from 1848-1870, in which the great patriots Mazzini (born 1805 died 1872) and Garibaldi (born 1807 died 1882) were the

* Signor Mussolini is the accredited leader of *Fascism*, the *Fascisti* representing a revolutionary movement against the alleged inactivity of post War Italian statesmen. The uniform of the movement is a black shirt, and the name is derived from *fascio* or band (cf. the *fascia* of the Roman *toro*) in which the movement was organized.

principal figures. It was completed when Lombardy was ceded by Austria in 1860 and Venice in 1866, and through the evacuation of the Papal States by the French in 1870. In 1870 the King of Italy entered Rome, and that city was declared to be the capital. The government is that of a constitutional monarchy with a legislature of two houses—the *Senate* (of 385 life members appointed by the King), and the *Chamber of Deputies* of 520 members (elected by adult manhood suffrage). The maximum duration of Parliament is 5 years. Deputies receive 15,000 lire annually.

PRODUCTION—Agriculture (including the growing of grapes, olives and chestnuts) is the principal industry. Italian wines are numerous and celebrated, and olives and olive oil are furnished by Tuscany, Liguria, and the province of Bari while fruit abounds and is largely exported. The cultivation of the silkworm forms an important industry. Among the principal minerals are iron, lead, zinc, copper, manganese and antimony ores, sulphur, gypsum, amianthus, alum and boracic acid. Silver is found in Sardinia, and some gold in the Alps. Salt is a Government monopoly. In 1922 the produce of the vines amounted to 78,782,800 gallons and that of the olive crop (1922) to 5,202,100 centals. The principal exports are cotton silk and woollen tissues, motor cars, olive oil, wine, candied citron, sienna earths, pastes, coral, raw boracic acid, raw and thrown silk, hemp, cattle straw, hares, rice, iron, zinc and copper ores, sulphur, marble, fruit, vegetables, fish and prepared meats, poultry, chemical products, woods, roots &c. for dyeing and tanning, artistic works &c. The imports chiefly consist of cotton, wheat, coal, coke, chemicals, colonial produce, yarns, jute and manufactured goods, woollens, raw silk, silkworms, eggs and cocoons, machinery, iron and steel in bars, plates and rails, hardware, raw hides, horses and cows, fixed oils, salt fish, dye stuffs, tobacco, earthenware &c. The manufactures are woollen, cotton silk, hemp and linen yarns and tissues, motor cars, rubber tyres and tubes, leathers, straw and felt hats, furniture, chemical products, paper, agricultural and other machinery, prepared meats, artistic works (such as mosaics, pottery, Venetian glass, alabaster ornaments) &c. Sugar is extracted from beet in large quantities for home consumption.

DEFENCE—The *Army* consists on a peace footing of 310,000 all ranks. On May 23, 1915, Italy declared war on Austria-Hungary, and on Aug. 27, 1916, a state of war was declared to exist with Germany. The cost of the war to Oct. 31, 1918, amounted to 48 milliards of lire (£1,980,000,000). During the War of 1914-1918, over 15 per cent of the population were mobilised, and 5,250,000 men passed into the Armies of Italy. The killed and missing amounted to 650,000. The *Navy* includes 5 modern and 6 pre-Dreadnought battleships, 5 armoured cruisers, 30 destroyers, 200 torpedo boats, and 80 submarines. The peace personnel of the Italian Navy is about 40,000 all ranks. Spezia and Pola, the chief naval and military ports of the kingdom, are securely fortified.

EDUCATION—Primary Education is free and compulsory, and evening continuation classes are also compulsory for military recruits. It is maintained by local taxation and State grants. Secondary education is generally State maintained, and schools are increasing in number.

Several of the Universities are of very ancient foundation.

COMMUNICATIONS—On June 30, 1922, there were 9,800 miles of railway open for traffic, 435 being electrified; the post-offices (1922) numbered 11,314, and there were 25,328 miles of telegraph line. The sea-going commercial marine (1922) consisted of 1,016 steamers (2,698,722 tons) and 397 sailing vessels (167,613 tons). In 1921 (including coasting traffic) 34,406,285 tons entered and 33,696,401 tons cleared at Italian ports.

	1920-21	1921-22
Revenue	L. 222,344,000,000	24,927,859,000
Expenditure	31,024,291,000	37,590,537,000

ITALIAN COLONIES, &c

Colony	Area.	Population
Libia	810 000	1 000 000
Eritrea	64 000	380,000
Somaliland	193,000	300,000
Tientsin	30	10 000
Koula	40,000	1,000,000
Total	1,107,030	2,690,000

Libia—The Turkish vilayet of Tripoli and the metessarif of Benghazi on the northern coast of Africa, were occupied by Italy in 1911-12, and under the Treaty of Ouchy (Oct 1912) the sovereignty of the province was transferred to the King of Italy, the spiritual head

ship over the Muhammadan population being retained by the Sultan. Tripoli is the most easterly of the Barbary States, extending from the frontiers of Tunis to those of Egypt, a distance along the coast line of nearly 1000 miles, and inland to the south a distance of about 800 miles. The transferred territory comprises the four sub-provinces or Mutes saiflik of Tripoli, Khoms, Jabel el Gharb, and Fezzan and also of Benghazi or Cyrenaica, a total area of 820 000 square miles, with a population of about 1,000,000. There are no rivers in the country and the rainfall being precarious, a good harvest can only be reckoned on every four or five years. Barley dates olives oranges, lemons, and vegetables are produced and the principal imports are metals, British and other European manufactures, tea, beads, wine and spirits, besides a number of articles for barter in Wadai, Bornu and the Western Sudan, whither caravans proceed from Tripoli. The principal articles of exports are ostrich feathers ivory, skins, sponges hides apart from grass, wool, cattle and horses. The ancient ruins in Cyrenaica i.e. at Cyrene Ptolemais and Apollonia, are interesting to explorers, as well as those at Ieptis Magna, which is close to Khoms or 70 miles from the city of Tripoli. The population of Benghazi consists of Arabs Greeks Maltese, and a few Levantines. The commerce in cereals, wool, cattle for Malta and other agricultural produce is considerable, when a sufficient rainfall causes good harvests. The capital of Tripolitania is Tripoli (population 50 000) and of Cyrenaica, Benghazi (population 35,000).

Governor of Cyrenaica, General Bongiovanni
 Governor of Tripolitania Count Volle

Eritrea is a Red Sea colony, and extends from Ras Kasar, 18° 2' N. to Ras Demois, 10° 45' N., and is bounded on N W by the Anglo Egyptian Sudan, on S by Abyssinia and on S E by French Somaliland. It consists of a triangular portion of barren and sandy lowland with a coast line along the Red Sea of about 700 miles and covers a total area of 64,000 square miles with a population of about 380 000 of whom about 300 000 are Europeans. The capital is Asmara, Massawa being the chief port where there is a good harbour. The principal products are potash skins and salt, of great value as being the monetary currency of Southern Abyssinia.

Governor of Eritrea, Admiral G Cerrina.

Somaliland—Italian Somaliland comprises a coastal strip on the Gulf of Aden and the Indian Ocean, from 11° N lat. to the Equator, and is bounded on the N by the Gulf of Aden, on E. by the Indian Ocean and on W by British Somaliland Abyssinia and British E. Africa. French and British Somaliland lie between Eritrea and Italian Somaliland. The total area is about 193,000 sq miles, and the population is estimated at 300,000. Agriculture and camel and cattle rearing are the principal industries. The capital is Mogadisho on the Indian Ocean.

Governor, C Riveri

Tientsin—Italy obtained in 1902 a concession of land fronting the Peiho river (China), with a total area of 20 square miles and a population of about 10,000 natives.

Koula—Under the Treaty of St. Peter's Italy received from Turkey the right to occupy the Asia Minor district of Koula (40,000 square miles) of which, however, the suzerainty remains vested in the Sultan.

This ancient and extensive Empire consists of four large and many small islands said to comprise in all above 4,000 the principal of which are Honshu Shikoku Kiu shu, Hokkaido or Yezo situate to the north of the main island, from which it is separated by the Tsugaru Straits, and Formosa, called by the Japanese, Taiwan. The Ainu, an uncivilised but harmless tribe, who in ancient times occupied the greater part of the country, are still found in Yezo. The Kurile Islands have belonged to Japan since 1875, and in 1876 she incorporated the Luchu (Riu kiu) Islands under the name of 'Prefecture of

Okinawa. The empire, with its dependencies, comprises an area of 335,886 square miles, with a population (Oct 1921) of 79,955,777. The islands are eminently volcanic, and 18 of the summits are still active, the chief of these, Fuji san, or Fujino-yama, the loftiest and most sacred mountain of Japan, about sixty miles from Tokio is 12,370 ft high, and has been dormant since 1707. Japan is also liable to frequent, and occasionally disastrous, earthquakes. The country is very mountainous, and not more than one sixth of its area is available for cultivation. It possesses numerous fine harbours. The soil is productive teeming with every variety of agricultural produce. Copper, iron sulphur, lead, manganese, tin, tungsten, molybdenum, antimony, zinc, agate, cornelian and rock crystal are found. Gold is found in the island of Sado, and silver mining is prosecuted on a small scale, while there is a good supply of middling coal. Petroleum is also being produced in quantities, especially in the Province of Echigo. Among the vegetable productions may be noted the camphor tree, paper mulberry, vegetable wax tree and a lacquer tree, which furnishes the celebrated 'lacquer of Japan'. The principal timber trees are the *Cryptomeria japonica*, *Pinus Massoniana*, and *Zelkova keaki*. The *Paulownia imperialis* is largely used for fancy boxes and works of art. The maple is merely for ornament. Chestnut oak, beech and elm are comparatively rare and little used. The tobacco-plant, tea shrub, potato, rice, wheat and other cereals are all cultivated. Rice is the staple food of the people, about 310,000,000 bushels being consumed annually (in 1922 the home grown crop amounted to 303,460,000 bushels). Agriculture upon which the Japanese bestow great care is their chief occupation. The coasts are extremely rich in fish. The floral kingdom is rich, beautiful and varied, though scented flowers are comparatively few. Fruit is abundant, including the orange, persimmon and loquat, European fruits, such as apples, strawberries, pears, grapes, figs, and peaches are produced, and the American navel orange is extensively grown.

Commerce and Industry—The chief manufactures are silk and cotton, cotton yarn, matches, paper, glass, lacquer ware, porcelain and bronze and shipbuilding is an important industry in the yards. The cotton-spinning factories increased from 155 in 1915 to 159 in 1922. The chief imports are raw cotton from India, U.S., Egypt, and China, flour from the U.S. and piece goods, metals, manures, woollens, wool drugs, rails, locomotives, and machinery from the U.S.A. and Europe. Sugar is largely imported from the Dutch East Indies, Philippine Islands and Formosa, indigo from Germany, British India and Dutch East Indies, kerosene oil from U.S. and the Dutch Indies, beans, peas, and pulse from China and Korea, and rice, principally from British India, French India, Korea, Siam, and China. The chief exports are silk, cotton fabrics, cotton yarns, refined sugar, knitted goods, copper, matches, coal, camphor, straw plaits, porcelain, earthenware, and marine products.

Communications—There were 2,128 miles of railroad open in Dec, 1922, in addition to 1,377 miles open in Korea, 755 miles in Formosa and 156 in Saghalien, while the South Manchurian Railway in China (686 miles) is under Japanese control. The mercantile marine of Japan and her dependencies consisted in 1922 of 3,370

steamers above 20 tons (874 of them over 1,000 tons), and 2,729 sailing vessels over 100 tons. The total tonnage entered and cleared at open ports in 1921 was 107,341,151 (73,204 vessels). The three great ports are Kobe, Yokohama and Osaka, the first named having a large transhipment trade. In addition to direct imports and exports. In 1921 there were 5,963 post offices dealing with 3,858,840 629 postal packets, and 45,003 miles of telegraph line carrying 70,924,692 messages outwards.

Defence—Service in the Army is universal and compulsory between the ages of 20 and 40. The peace strength was reduced in 1922 to 212,731 all ranks. The Navy includes 11 battleships (5 to be scrapped), 7 battle cruisers (3 to be scrapped), 18 coast defence (5 to be scrapped), 15 light cruisers, 103 destroyers, 10 torpedo boats and 43 submarines (July, 1923). Japan declared war against Germany on Aug. 23, 1914, and her fleet was active throughout the war, while her troops took part in the operations in Siberia.

Education is in the lower grades free and compulsory. High schools are State aided, and prepare for a 3 years course at the Universities. There are high schools for girls, and the technical and special schools are well attended. There are six State Universities of Tokio (a) Kyoto, Tohoku (at Sendai), Hokkaido and Kiushu (at Fukuoka).

Formosa—The island of Formosa (Taiwan) was ceded by China to Japan (June 2, 1895) in accordance with the Treaty of Peace. Its total area is 13,500 square miles, with 3,807,229 inhabitants (1921). Imports, Yen 40 433,289 exports Yen 23,541,621. In 1921 The colony has been self supporting since 1906. Estimated rev and exp (1922-23), Yen 106,002,034 Capital, Taihoku, pop (1921), 173,359.

Saghalien (Karafuto)—The southern half of this island was ceded by Russia at the close of the Russo-Japanese war. The ceded territory has a total area of 9,824 sq. miles with a population (1921) of 103,215. The Japanese Government is encouraging the settlement of agriculturists and there is a large fishing industry. Estimated revenue and expenditure (1922-23) Yen 18,329,333.

The Kwantung Peninsula (capital, Dairen, formerly Daini), which had been leased to Russia by China, was similarly leased to Japan after the Russo-Japanese war. Area, 1,220 sq miles, population (1921) 840,657. Dairen provides Japan with a mainland port, ice free all the year round, and the peninsula is fertile. Imports (1920) Yen 21,211,303, exports, Yen 115 030,780.

Estimated revenue, Yen 15,947,658, (1921-22). Capital, Dairen, pop (1921), 131,206.

The **Pescadores** (Bokoto) consists of about 63 islands, with a total area of 85 square miles and a population of (1921) of 56,600.

Korea (Cho sen)—By a treaty of Aug. 23, 1910, Korea was annexed to Japan and became part of the Japanese Empire.

Korea is situated between 122° and 128° E long, and between 34° and 43° N lat., and the coast is fringed with innumerable islands, of which the largest is Quelpart. Total length, 600 miles from north to south and greatest breadth 135 miles from east to west with an area of about 85,156 square miles. Population estimated at 17,452,918 (Dec 1921) there are 367,618 (Dec 1921) Japanese in the country. The soil is fertile, but mountainous except in the river valleys. The staple agricultural products being rice and other cereals beans cotton tobacco, and hemp the other natural products are chiefly gold and hides. Ginseng a medicinal root much affected by the Chinese, is largely grown under Government supervision in the province of Pyeng An, and, being a Government monopoly forms a rich source of revenue. Gold, copper coal iron, and other minerals are distributed throughout the country. The principal exports are beans, rice, fish, livestock cowhides, ginseng wheat barley, iron ores and raw cotton. Manufactures are as yet in a primitive condition, the principal being hemp cloth brass ware, and an excellent quality of paper resembling the Japanese article, but stouter. The greater part of the sea borne trade is carried in Japanese bottoms. Considerable progress is being made in the direction of the proper lighting of the coast. The total railway mileage open to traffic is 1 397 miles. Estimated rev and exp (1922-23), 1 151,812,124,167 Capital, Seoul (Keijo fu), pop 250,000.

Imports into Korea, 1921 Yen 232,381,524
Exports from Korea, 1921 218,277,223

Pacific Islands—Under the Treaty of Versailles, 1919, Germany renounced the sovereignty of all her overseas possessions, and the German Pacific Islands N of the Equator have been allocated to Japan. These islands, in Micronesia, are the Pelew Caroline, Marshall and Ladrone groups, with a total area of about 800 sq miles and a population of 48,505 natives and 3,671 Japanese (1920).

Shantung—The German possessions in the Shantung Peninsula of China (Kiao-Chao, &c.), were allocated to Japan.

CAPITAL OF THE JAPANESE EMPIRE, Tōkiō, formerly called Yedo, the residence of the Emperor, population (Oct 1921), 2,204,400. On Sept. 1, 1923 a disastrous earthquake destroyed great portions of the cities of Tokio and Yokohama. Other cities are—Osaka, 1,206,200. Kiōto, the ancient capital, 613,300. Nagoya, 616,700. KERAK, OR TRANSJORDANIA

Emir, H H Abdullah second son of the King
of Hejaz, appointed April, 1921

Kerak (or Transjordan), bounded on the west
by Palestine, on the north by Syria on the east
by Iraq, and on the south by Hejaz and Nejd
has an Arab population of about 500,000 of
whom almost all are Muhammadans the area
is unknown as the boundaries are not definitely
determined The extreme west of the country
is fertile, and agricultural and pastoral indus-
tries are carried on, but the rest of the country
is almost entirely desert The Hejaz Railway
connects Mecca with Amman the latter being
an important station on the Cairo Baghdad
air route

KURDISTAN

Kurdistan is a mountainous district of Eastern
Asia Minor, between Armenia (N), Syria and
Mesopotamia (S), Persia (E), and Turkish
Anatolia (W). The Kurds are a semi nomadic
tribe inhabiting the mountainous regions of
Turkish Asia Minor and of N W Persia. They
are believed to be the Karduchi of Xenophon's
Anabasis, and for centuries they lived in
quasi independence, punctuated by raids and
subsequent punitive expeditions. In 1920 the
autonomy of Kurdistan was recognised by Turkey
and Persia, and by the Supreme Council of the
Allied Powers

The area of the country is estimated at 65 000
to 70,000 square miles, with a population of 2 to
3 millions The chief centres are Diarbekr,
Bitlis, Van (to the east of Lake Van) in the
former Turkish dominions, and Urmia (to the
west of Lake Urmia) and Kermanshah, in the
Persian dominions. Lake Van (2,000 sq miles
in extent) occupies the central portion of the

former Vilayet of Van. Lake Urmia (1,600 sq
miles in extent), across the Persian border, is
about 4,000 feet above sea level, and its waters
are so salt that fish cannot live therein.

The climate is severe, with a short hot summer
and long and severe winter, but cereals, vines
and fruit are abundantly cultivated on the
slopes of the mountains rice is grown in the
hot, well watered plains, while the rich pasture
lands of the slopes and valleys support large
herds of horses, mules and sheep The mineral
wealth of the country is almost entirely un-
developed, but it is believed to be very great,
and there are numerous hot and cold mineral
springs salt is obtained in large quantities in
the neighbourhood of Lake Van

The Kurds are Muhammadans and fierce
persecutors of the Christians in their districts
and in the neighbouring territory of Armenia.

A Baltic Republic at the eastern and southern
shore of the Gulf of Riga, formerly part of the
Russian Empire Latvia was proclaimed an
independent state on Nov 18, 1918. Its frontiers
are common with Estonia, Russia, Poland and
Lithuania The constitution is that of a
democratic republic, with universal suffrage
and proportional representation Parliament
(Saeima) consists of a single chamber of 300
members The area being about 41,000 sq miles,
with a population of about 2,000,000

The surface of the country is generally flat
with marshy areas, interspersed with many
lakes Agriculture and dairy farming are the
principal occupations of the people, and there
are many flourishing industries The fisheries
are also of importance The chief exports are
flax, timber, butter, paper and glass chief im-
ports are agricultural machinery and implements
and wood and metal machinery The total
imports in 1922 were valued at 107,000,000 *lats*
(francs). The tonnage of ships entered in 1922
was 1,293,515 tons The chief ports are Riga,
Libau and Windau. In 1923 there were 1,807
miles of railway in operation The revenue in
1923-24 was estimated at 173,000,000 *lats*

An independent Negro Republic of Western Africa, occupying that part of the coast of North Guinea which is between the rivers Cavalla, S.E., and Mano N.W., a distance of about 350 miles with an area of about 48,000 square miles and extending to the interior to latitude 8° 50', a distance of 150 miles from the seaboard. It was founded by the American Colonization Society in 1820, and has been recognised since 1847 as an independent State. The population is estimated at 1,500,000 to 2,000,000, including about 12,000 Americo-Liberians. The principal exports are palm kernels, piasava, palm oil, coffee, cocoa, ivory and kola nuts. The chief imports are rice, tobacco, Manchester goods, provisions, spirits, salt, hardware, glass and earthenware and building materials. The executive power is vested in a President elected for four years, assisted by a ministry; there are two houses of Legislature, the Senate, with eight members elected for six years, and the House of Representatives with fifteen members elected for four years. There is no regular army but there is an enlisted frontier force of about 600 men under native officers. The control of the customs is in the hands of a General Receiver (who is also Financial Adviser) lent by the Government of the U.S.A. There are 10 ports of entry along the 350 miles of coast and 12 interior ports. In 1921, 263 vessels (622,668 net tons) entered and cleared at Monrovia, of these 82 (249,228 net tons) were British.

The independence of the Lithuanian Republic (Lietuva) was proclaimed at Vilna on Feb. 16, 1918. The Republic consists of the former Russian Government of Kovno and portions of the Suwalki and Vilna Governments, and is bounded on the N. by Latvia on the S. by the German district of Königsberg and Poland, on the E. by Poland, and on the W. by the Baltic Sea; the total area included in the Republic (including Memel Territory) being about 20,000 sq. miles with an estimated population of 2,000,000. Memel Territory was occupied by Lithuania in Jan. 1923, and negotiations as to its final status are still (Nov. 1923) in progress between the Lithuanian Government and the Conference of Ambassadors.

The legislature consists of a single chamber Assembly (*Seimas*) of 78 members elected by universal adult suffrage; the Executive being entrusted to a council of ministers. A new currency was issued in Oct. 1922 to supersede the depreciated German mark: 1 Lit of 100 cents = one tenth U.S. gold \$; Rate of exchange (Sept. 1923) 1 Lit 45 40 = £1.

A Grand Duchy in Central Europe bounded by Germany, Belgium, and France. It formed part of the Germanic Confederation, 1815-66, and was included in the German 'Zollverein'. In 1867 the Treaty of London declared it a neutral territory under the sovereignty of the King of the Netherlands on whose decease 23 Nov. 1890 it passed to the Duke of Nassau. The territory was invaded and overrun by the Germans at the commencement of the war in 1914, but was liberated in 1918, U S troops entering the capital on Nov. 22. By the Treaty of Versailles, 1919, the country is declared to be free from all ties with Germany. The area is 999 square miles; the population (1916) 263,824, nearly all Roman Catholics. The principality is rich in iron ore. The revenue in 1921 was estimated at 63,808,926 francs, expenditure 149,773,345 francs; debt (1 Jan. 1921) 128,000,000 francs. There are 328 miles of railway. The army numbers about 300 men. The capital, Luxemburg (population 45,676), is a dismantled fortress.

MEMEL

(See also Lithuania.)

Under the Treaty of Versailles Germany renounced the sovereignty over the town and territory of Memel, and a French High Commissioner, with a small garrison, governed the Territory in the name of the Allies until Jan. 1923 when the Territory was invaded and occupied by the Lithuanians. Negotiations are proceeding as to the terms of autonomy upon which it shall be placed under Lithuanian sovereignty. The total area administered is 945 square miles with a population of about 150,000, of whom about 42,000 inhabit the town of Memel.

Mexico occupies the southern part of the continent of North America, with an extensive seaboard to both the Atlantic and Pacific Oceans, extending from 15° to 32° 30' N. lat. and 87° to 117° W. long. and comprising one of the richest and most varied zones in the world. It comprises 27 states, 3 territories, and the federal district of Mexico making in all 32 political divisions, comprehending an area of 766,883 square miles with a population of (1910) 15,063,207.

The two great ranges of North America, the Sierra Nevada and Rocky Mountains, are prolonged from the north to a convergence towards the narrowing Isthmus of Tehantepec, their course being parallel with the west and east coasts. The surface of the interior consists of an elevated plateau between the two ranges with steep slopes both to the Pacific and Atlantic (Gulf of Mexico). In the west is the Peninsula of California, with a mountainous surface, separated from the mainland by the Gulf of California. The Sierra Nevada, known in Mexico as the Sierra Madre, terminates in a transverse series of volcanic peaks, from Colima on the west to Citlaltepete on the east, the intermediate and highest peaks being Ixtaccihuatl (17,899 feet) and Popocatepetl (19,784 feet). The low lying lands of the coasts form the *Tierra Caliente*, or tropical regions (below 3,000 feet), the higher levels form the *Tierra Templada*, or temperate region (from 3,000 to 5,000 feet), and the summit of the plateau with its peaks is known as *Tierra Fria* or cold region (above 5,000 feet). The only considerable rivers are the *Rio Grande del Norte*, which forms part of the northern boundary, and is navigable for about 70 miles from its mouth in the Gulf of Mexico, and the *Rio Grande de Santiago*, which runs from Lake Chapala to the Pacific. The remaining streams are governed by the formation of the land and run in mountain torrents between deep cut cañons or "barrancas". The largest fresh water lakes are Chapala, some 50 miles in length, and Patzcuaro and Xochimilco. In the north west are saline lakes amid bare and dry regions. The climate varies according to the altitude. Yellow fever sometimes occurs at Merida, Yucatan.

The earliest invaders, or *Toltecs*, gave place in the 13th century to the *Aztecs*, who were conquered in the 16th century by Spanish adventurers under *Hernán Cortés*. Spanish rule was established at *Tenochtitlan*, a 14th century Aztec city (now Mexico), and Mexico remained a Spanish dominion until its freedom was asserted by a revolutionary war, 1810-1827. From 1827-1848 the province of Texas gave rise to hostilities with the United States, terminating in a three years war and a cession of the disputed territory to the victorious northern States. In 1820 a Republic was proclaimed, but Iturbide declared himself Emperor in 1822. He was shot in 1824, and a Republic was again established. In 1828 the French troops came to Mexico, and in 1834 an Empire under Ferdinand Maximilian was declared. In 1867 the downfall of the Empire and the death of the Emperor gave rise to the new Republic, which has endured to the present day. The most prominent of modern Presidents is *Porfirio Díaz* who ruled (except during 1880-4) from 1876 to May 25, 1911. Since the fall of Díaz internal disturbances, in which

* The remains of *Hernán Cortés* have been definitely located in the Temple of Jesus, Mexico City. They are contained in a marble vault, with the funeral garments.

eleven Presidents have figured, have continued with varying degrees of intensity, and considerable friction (amounting almost to a state of war) has arisen with the United States. On July 15, 1924, Venustiano Carranza assumed control of the executive, but his anti foreign attitude and legislation, together with the seizure of many properties (a few of which belonged to British subjects) led to a refusal of the British Government to grant recognition of his administration. The degree to which Carranza departed from his declaration of neutrality during the Great War undoubtedly influenced the British Government when this policy was adopted. Carranza was overthrown by a further revolution in 1920, and is believed to have been shot by the insurgents. After the fall of Carranza the executive power was assumed by de la Huerta as provisional President, and on Dec 1, 1920, General Obregon, whose coup d'état had caused the downfall of Carranza, became head of the Republic. The determination of the new government to uphold the Carranza constitution of 1917, which has led to confiscatory measures in connection with nationalization of the petroleum of the country, and contains (among other departures from the accepted comity of nations) provisions which restrict the rights of foreigners, has caused the British, American, French and Belgian governments to adopt a policy of non recognition of the Obregon administration until foreign interests are treated with the respect customary among enlightened nations. The expropriation, with out payment of compensation, of several hundreds of private properties in pursuance of the Obregon agrarian policy, has called forth strong protests from foreign Powers.

Acapulco, Manzanillo, Mazatlan, Salina Cruz, and Guaymas are the chief ports on the Pacific and Vera Cruz, Tampico, Progreso, and Puerto Mexico on the Atlantic or Gulf of Mexico. There were 824 miles of railroad open on Sept 16 1923 and 40 687 miles of telegraph. The railroads have in a large measure been built by American and English companies.

The principal agricultural crops are maize, wheat, barley, Chile pepper, sugar, coffee, cotton, tobacco, vanilla, flax, grapes and all kinds of tropical fruit. The maguey, or Mexican aloe, yields a favourite beverage, 'pulque'. Other species of the same plant supply pita, flax and sisal hemp (henequen). The forests abound in mahogany, rosewood, ebony and caoutchouc trees. The mineral wealth is very great: silver and gold, copper, lead and quicksilver, iron and coal, are the leading products of the mines. Woolens and cotton spinning and weaving and other branches of industry are encouraged by high protective duties. The imports nevertheless consist very largely of textile manufactures. Of the exports 85 per cent. consist of silver and gold, sisal hemp (henequen), coffee, hides and skins, timber, logwood, vanilla, tobacco, dyestuffs, sugar, and drugs ranking next in importance.

The monetary system has recently been placed on a gold basis, with a gold peso = 50 cents U.S. currency. In Sept. 1923, the Mexican Government undertook to set aside for the service of the debt the sum of 20,000,000 gold pesos in 1923, rising by 2 million gold pesos annually to 22 million gold pesos in 1927. The total of the debt in Sept. 1923, was stated at 208,820,200 gold pesos (= 2,088,202,200 U.S.) of which about one half was raised for railroad purposes.

The language of the country is Spanish.
 Estimated revenue (1923) £216,000,000

A miniature Principality on the Mediterranean, between France and Italy, consisting of the old town of Monaco, La Condamine, and Monte Carlo, where is the famous casino, and comprising a narrow strip of country extending from the Monaco cemetery on the west to St. Roman on the east. It is about 3 miles long and $1\frac{1}{2}$ miles broad, with (1913) 22,990 inhabitants, and a yearly average of over 1,500,000 visitors. The whole available ground is built over so that there is no cultivation. There is a small harbour (24 ft alongside quay) and the import duties are the same as in France. There is a local police force of 200 men.

MOROCCO

(Maghreb el aksa)

French and Spanish Protectorate

Sultan, Moulay Yusef, C.M.G., proclaimed Aug. 18, 1912

Morocco, the largest of the Barbary States, is situated in the north west of the African Continent, between 27° – 36° N lat. and 1° 11° $40'$ W long, with a total area estimated at 314,000 square miles, and a population of about 7,000,000. Morocco is traversed from the Atlantic coast in the south west to the Algerian frontier in the north-east by five parallel ranges, known generally as the *Atlas Mountains*. Between the various ranges lie well watered and fertile plains, the lower slopes of the northern flanks of the mountains being well wooded while the southern slopes are exposed to the dry winds of the desert and are generally arid and desolate. The most northerly point of Morocco is the peninsular of Ceuta, which is separated from the Continent of Europe by the narrow strait of Gibraltar. The Jebel Musa dominates the promontory and with the rocky eminence of Gibraltar was known to the ancients as *The Pillars of Hercules*, the western gateway of the Mediterranean. Between 32° N and 36° N is the headland Ghibli which encloses a bay containing the port of Asadii formerly known as the "Gate of the Sudan." This port formed the bone of contention between France and Germany in 1911–1912.

The climate is generally good and undoubtedly healthy, especially on the Atlantic coast, the country being sheltered by the Atlas Mountains from the hot winds of the Sahara. The extremes of temperature in Tangier and Mogador are 92° Fahrenheit in the summer and 37° in the winter with a rainy season from October to May. The Mediterranean coast is drier and less temperate, but not unhealthy while the plains of the interior are intensely hot.

Government—From the end of the 8th century A.D. until the year 1912 Morocco was ruled by a despotic Amir or Sultan of various dynasties, that of Hili having reigned since 1649. The imperial umbrella (the symbol of sovereignty) was passed on by nomination, and the rule was arbitrary and unchecked by any civil limits. The country was subject to European intervention at many periods, and during the closing years of the nineteenth century the dominant power in the country was France, whose Algerian territory formed the

eastern boundary. By the Anglo-French Convention of 1904 Great Britain had recognised the predominance of French rights, but in 1905 Germany exhibited an interest in Moroccan affairs and at the *Algeiras Conference* in January, 1906 an attempt was made by the Powers to define the various interests, and to establish order in the country by means of an organised police force. Between 1906 and 1912 there were frequent conflicts between French troops and Moroccan tribesmen and in 1908 internal dissensions led to the defeat and deposition of the Sultan Abd el Aziz IV by his brother Hafid who eventually triumphed and was recognised by the Powers in 1909. In 1912 Sultan Hafid abdicated and accepted a pension from France, and was succeeded by his brother Moulay Yusef.

France is the paramount power in Morocco, and the Government of the greater part of the country is administered by the French Republic, which is recognised as the protecting power. In addition to France, the Kingdom of Spain has had relations with Morocco for many centuries. The northern portion of Morocco, as defined in the Franco-Spanish Treaty of 1912, forms a Spanish sphere of influence. In this Spanish zone there were tribal risings in 1912, and during the operations to quell these risings the Spanish Expeditionary force met with serious reverses in the neighbourhood of Melilla. A Civil High Commissioner was appointed in 1912 over the Spanish zone to inaugurate a policy of pacification. Ceuta, in 35° $54'$ N lat. and 5° $18'$ W long, has been a Spanish possession since the close of the 16th century and forms part of the administrative province of Cadiz, and the adjacent Alhucemas and Zaffarin islands are Spanish possessions. A special international régime was designed for Tangier before the War by negotiations between the British, French and Spanish Governments, but the outbreak of the War prevented this régime from being put into operation. Pending further negotiations the town and zone are administered by the Sultan's representative and the diplomatic body.

Among the agricultural products are wheat, barley, maize, beans, peas, buades, linseed, coriander, cummin, fenugreek, esparto, and hemp and the northern slopes of the Atlas produce many fruits, principally figs, almonds, pomegranates, lemons, olives, oranges and dates, the latter growing also on the southern slopes and in the plains. The live stock includes large quantities of horses, cattle, sheep and goats, while the poultry and egg industry is of increasing importance. Antimony, iron, coal, copper, lead and tin (the last three in considerable quantities) are known to exist, and gold and silver are also found. Rock salt and brine are exported in large quantities. The trade of Morocco is chiefly with France and Algeria, Great Britain and Spain the chief imports being cottons, sugar and soft goods, the exports being grain, eggs, hides and skins, and wool. The unit of currency in the French protectorate is the franc, while in the Tangier zone the franc the Spanish and the *Hasani peneta* are all current, and in the Spanish zone the two last of these currencies.

Communications—The French have built some narrow gauge military railways from Casablanca to Rabat, to Kinfra and Mequinez, and to Settet, while the Franco-Spanish treaty provides

for a line from Tangier to Fez. Telegraphic communication is established by submarine cables from Tangier to Cadiz, Tarifa and Oran, and there are wireless stations at Tangier, Rabat, Casablanca, and Mogador. Inland lines have been built by the French to Fez and to some of the ports, as well as to the borders of the Spanish zone, and the latter line will shortly be extended to Tangier. Roads have also been constructed in the French zone, and it is now possible to go to Fez or Marrakesh by motor car. The principal Harbours are Tetuan, Tangier, El Arish, Rabat, Casablanca, Mazagan, Safi, Mehedra, and Mogador.

A maritime Kingdom of Central Europe, situate

on the North Sea, in lat 50° 45'—53° 34' N and

long 3° 22'—7° 14' E, consisting of 11 provinces,

and containing a total area of 12,761 square miles,

with a population in August 1922, of 7,029,881.

The majority, about three fifths, belong to the

several Reformed Churches, and the remainder

are Roman Catholics, with about 107,000 Jews.

The land is generally flat and low intersected

by numerous canals and connecting rivers—

in fact, a network of water courses. The

principal rivers are the Rhine Maas, and

Yssel with the mouths of the Schelde. The

chief native products are herrings and other

fish cattle horses, swine, sheep, poultry eggs,

seed potatoes oats rye wheat, barley, beans,

peas, buckwheat beetroot, chicory, flax hemp

tobacco, and dairy produce. The principal

manufactures are shipping, bricks, margarine,

cocoa chocolate linen, rich damasks cottons

woollens, cigars and other manufactured to

bacco candles, confectionery, earthenware and

pottery, glass bottles and ware, chemical and

pharmaceutical products, matches, perfumery,

sugar bicycles and automobiles, boots and shoes,

starch, potato flour engines metal substances

works of art in gold and silver, incandescent

lamps machinery, motors, paper, printing, oil,

beer 'geneva' and other liquors. Diamond

cutting employs numerous hands in Amsterdam.

Communications.—The total extent of canals

is about 2,000 miles. There were 2,177 miles of

railroad open in 1918, and 5,449 miles of tele

graph line. The mercantile marine, on Dec 31,

1922, consisted of 570 steam and motor vessels

and 320 sailing vessels etc. In 1922, 14,074

vessels (48,307,000 cubic metres) entered, and

14,138 vessels (46,554,000 cubic metres) cleared

at the various ports. An Act for the damming

and draining of the Zuyder Zee was passed in

1918.

Defence.—The Home Forces consist of a

conscript army, with an annual levy of 29,300

men, producing a first-line army of 251,000, or

(including reserves) 327,000 all ranks. The

Royal Navy consisted, on July 1, 1921, of 90

ships (4 of them ironclads, and 1 protected

cruiser).

Education.—Private State aided primary instruction is encouraged rather than public, though the latter is provided if required, by local taxation. The average attendance at primary schools is 95 per cent. Secondary schools for working classes are numerous, well equipped and attended. The principal Universities are at Amsterdam, Groningen, Leiden, and Utrecht, and there are technical universities at Delft (polytechnic), Rotterdam (commercial, Wageningen (agriculture), and Utrecht (veterinary).

NETHERLANDS COLONIES

TOTAL AREA 832,473 square miles

POPULATION (1920) 49,514,038

The possessions of the Kingdom of the Netherlands in the EAST INDIES (Administrative Capital Batavia pop. about 140,000) are very considerable, comprising the whole of the SUNDA ISLANDS and MOLUCCAS Sumatra (area, 162,000 sq. miles), Java and Madura (51,000 sq. miles), the Netherlands Borneo (125,000 sq. miles), Celebes Island (72,000 sq. miles), Moluccas (44,000 sq. miles), Timor Islands (18,000 sq. miles), with the exception of a portion of Borneo and Eastern Timor, together with WESTERN NEW GUINEA. JAVA and MADURA have a population (1920) of 34,984,171 and produce a sufficient supply of food for a dense population besides furnishing sugar (29,272,103 piculs produced in 1922) tobacco tea coffee tin and other products for exportation (customs receipts, 1922 43,367,388 fl.). The outlying islands are frequently administered by their own princes subject to the directions of a Netherlands Resident. There was (1922) a colonial army of 1,349 officers and 31,695 men. The colonial revenue for 1921 was about 769,689,000 guilders and the expenditure about 1,055,173,000 guilders. The exports for private account amounted in 1921 for Java Madura and the other outlying islands to 1,193,709,000 florins while the imports for the same year amounted to 1,117,428,000 florins.

In South America the colony of SURINAM, or Netherlands Guiana (imports 1921 13,150,025 guilders exports 6,562,014 guilders) embraces 49,845 square miles and contains (1922) 108,241 inhabitants, and in the West Indies CURAÇAO (imports, 12,566,036 guilders exports 12,763,971 guilders population 33,232) and five other small islands belong to the Netherlands having an area of 436 square miles with a population of 21,731 (imports, 1,811,924 florins exports, 627,365 florins).

NICARAGUA

(República de Nicaragua)

President, Señor Don Bartolomé Martínez

Minister of Foreign Affairs, Dr. Carlos Cuadra

Pasos

Chargé d'Affaires (London Legation), Señor Don

Eduardo Pérez Triana, 49 St. James's St. S.W.

Consul in London Señor Don Narciso Lacayo 65

Bishopsgate, E.C. 2

Vice Consul, Wyness B. Gauld

The largest State of Central America with a long seaboard on both the Atlantic and Pacific Oceans, situated between 9° 45'—13° N. lat. and 83° 40'—87° 28' W. long., containing an area of 51,660 English square miles and a population (census of 1920) of 626,119, of whom about three quarters are mixed blood and the rest Indians,

besides the Mosquitos, who are mostly in a primitive state.

Nicaragua was discovered by Columbus in 1492, and was overrun by the Spaniards under Davila in the first quarter of the 16th century, forming part of the Spanish Captaincy General of Guatemala until 1821, when its independence was secured. The present constitution rests on the fundamental law of Nov 10, 1911 (amended 1913) and is that of a centralised republic. The President is elected by direct suffrage for four years.

The chief products are coffee, bananas, sugar, timber (cedar, mahogany, rosewood, &c) tobacco, maize, rice, beans, cocoa, hides, gold and silver. Considerable quantities of foodstuffs are imported as well as cottons and other manufactures, principally from the United States, which also take the greater part of the exports.

There are 146 miles of railway, 2,500 miles of telegraph and 1,440 miles of telephone. Good roads are very few and transportation especially in the rainy season (May Nov), is attended with great difficulties.

Corinto, on the Pacific coast, is the chief port of the country, handling about 75 per cent of the total trade. Bluefields is an important port on the Atlantic coast, whence considerable quantities of bananas and timber are shipped to New Orleans. Owing to defective communications the Atlantic littoral is practically isolated from the rest of the Republic and the chief centres of population.

Education is backward, at least 50 per cent of the population being illiterate.

The official language of the country is Spanish.

	1911	1912.

Norway, an independent kingdom founded in 872 (fundamental law of May 17 1814) was united with Sweden under the same King from Nov 4, 1814, to June 7 1905 when the union was dissolved. The Parliament of 150 members is called the "Storting", which is divided into two sections chosen by itself to discuss projected Bills called Odelsting and "Lagting". Norway, the western and northern portion of the Scandinavian peninsula is about 1,100 miles in length, its greatest width about 250 miles. It is divided into 20 provinces or fylker, and comprises an area of 246,130 sq miles with a population (1900) of 2,449,775. The coast line is extensive, deeply indented with numerous fjords and fringed with an immense number of rocky islands. The surface is mountainous consisting of elevated and barren table lands separated by deep and narrow valleys. The cultivated area is about one thirtieth part of the country forests cover nearly one fourth, the rest consists of highland pastures or uninhabitable mountains.

Agriculture gives employment to a large part of the population but is unable to furnish sufficient produce for home consumption hence it has been necessary to import considerable quantities of corn meat, and pork. Fishing and forestry are important industries and manufactures are aided by great resources of water power, calculated at 12 to 13 millions of horse power, of which about 10 to 11 per cent are utilized. The imports consist chiefly of the necessary articles of consumption. The chief exports consist of fish, oil, and other products of the fisheries, timber, matches, pulp, paper, skins and furs, nails, minerals, stone, ice, calcium carbide condensed milk, butter, margarine, tinned goods, saltpetre, &c. Norway voted for prohibition of alcoholic beverages in 1919 (\$85,000 for prohibition, 275,000 against).

Defence—Service in the National Militia is universal and compulsory. The peace strength is about 60,000 all ranks, and the war effective is about 360,000 all ranks. In time of war all males between the ages of 15 and 55 are liable for service. The Navy consists of 4 ironclads, 27 torpedo-boats, 1 gunboat, 3 destroyers, 7 submarines and several minelayers.

Education is compulsory and free between the ages of 7 and 14, schools being maintained by

local taxation with State grants in aid. The attendance is high. Secondary schools are provided by the State, by local authorities, and privately. There are many special schools and industrial and technical institutes. The University of Christiania was attended in 1922 by 2,300 students.

Communications—The total length of railways open in 1922 was 2,128 miles of which 271 miles were private lines. The length of telegraphs and telephones belonging to the State in June 1922, was 16,920 miles. The mercantile marine, Jan 1 1923, consisted of 3,740 vessels of 1,679,400 net tons. The earnings of the Norwegian mercantile marine in foreign traffic amounted in 1922 to about 462,000,000 kroner.

Panama, formerly one of the nine Departments of Colombia, revolted in Nov 1903, and established a separate Government. The area of the Republic is 31,890 square miles, the population 422,522 (excluding Canal Zone). The soil is extremely fertile, but there is little cultivation and nearly one half of the land is uncultivated. The chief crops are bananas, coffee, tobacco, and cereals. The imports are almost entirely manufactured goods and foodstuffs. A railway 47 miles in length joins the two oceans.

	1921-22	1922-23

PAPACY, The

Sovereign Pontiff (260th) His Holiness Pope Pius XI (Achille Ratti) born at Deslo, March 31, 1857 elected Pope (in succession to Benedict XV) Feb 6 1922

The office of the ecclesiastical head of the Roman Catholic Church is vested in the Pope of Rome, who is the *Sovereign Pontiff* of the Western Church and claims temporal power over the Papal States which were incorporated with Italy from 1860 to 1870, the territory of the Papacy now being confined to the palaces of the Vatican and the Lateran and the Villa of Castel Gandolfo, which are guaranteed to the Pope (with a yearly indemnity of 3,250,000 lire which is neither claimed nor paid) by the Italian Government

An inland State of South America situate between 20°–6° 30' S lat and 54°–62° W long. The area of Paraguay (exclusive of the Chaco) is computed at 75,700 square miles and it contains a population of about 800,000

Paraguay was visited in 1527 by Sebastian Cabot and in 1535 was settled as a Spanish possession. In 1811 Paraguay declared its independence of Spain and from 1814–1840 was governed by Francia, a Paraguayan despot, who was succeeded by Lopez 1840–1863. In 1864 Francisco Solano Lopez succeeded his father, and in 1864 declared war against Brazil, Argentina and Uruguay being involved in the struggle. Against these three nations Lopez conducted a five years war, which terminated in his defeat and death at the *Battle of Cerro Cord* March 1, 1870. This dogged struggle reduced the country to complete prostration, and the population which was 800,000 in 1857, is alleged to have fallen in 1870 to 250,000, of whom barely 30,000 were men. The present constitution was adopted at the close of the war, and under its provisions the head of the executive is the President, elected by an electoral college for four years and

ineligible for office for eight consecutive years after the expiration of his term. A Vice President is similarly elected, and succeeds automatically in the case of the death, expulsion or absence of the President. There is a Cabinet of 5 members.

Paraguay proper consists of a series of plateaus, intersected by abrupt ranges of hills, some of which reach an altitude of 2,000 to 3,000 feet above sea level. The Paraguay and Alto Paraná rivers are navigable at all seasons for vessels of 6 to 7 feet draft. Many of the tributary streams are also navigable for much of the year. The Pilcomayo river is navigable for small craft for 180 miles from Asunción, but is liable to shrink unduly with drought. The plateaus are covered with grassy plains and dense forest, the soil being marshy in many parts and liable to floods, while the hills are covered for the most part with immense and valuable forests. The streams flowing into the Alto Paraná descend precipitously into that river. In the angle formed by the Paraná Paraguay confluence are extensive marshes, one of which, known as "Neembucu, or endless, is drained by Lake Ypoa, a large lagoon, south east of the capital. The Chaco, lying between the rivers Paraguay and Pilcomayo and bounded on the north by Brazil, forms the subject of a long standing dispute with Bolivia. It is practically a dead level though a slight and uniform rise westward is now known to exist and suffers much from floods and still more from drought.

The chief agricultural products are tobacco, yerba maté, oranges, timber quebracho extract, hides and cassava (mandioca), maize, rice sugar cane, ground nuts, and other tropical and sub tropical plants. The forests contain many varieties of timber, but only cedar and a few of the best known hardwoods and a market abroad. Stock raising, lumbering, tobacco growing and the gathering of Yerba (Paraguay tea) are the principal industries. The chief articles of export are hides, timber yerba maté, tobacco, quebracho extract, cattle and meat products, oranges, and petit grain oil. The Army numbers 2,000 to 3,000 men. A railway 232 miles in length which belongs to an English company connects Paraguay with the Argentine railway system. The journey from Asunción to Buenos Aires (585 miles) occupies 53 hours. Train ferries enable the run to be accomplished without break of bulk. The language is Spanish.

Persia—called by the natives Iran—comprises an area of 630,000 sq ms, with a population estimated at 20,000,000. By the Anglo Russian Convention of Aug, 1907, Great Britain and Russia mutually engaged to respect the integrity and independence of Persia while marking out certain regions in S E and N W Persia respectively in which each had for geographical and economic reasons, special interests. On Aug 9, 1919, this Agreement was superseded by a Treaty between Great Britain and Persia, by which Great Britain agrees to respect the integrity of Persia, and to provide a loan of £2,000,000 in return for the security of diplomatic and commercial relations between the two countries and for the purpose of establishing order and developing the resources of the State. This agreement was however, never put into force, and was denounced by the Persian Government (with the concurrence of Great Britain) in Feb, 1921.

In March 1921 Persia signed a treaty with the Russian Soviet Republic, which provides (inter alia) for mutual diplomatic and consular representation, restores to Persia Firuzeh and Ashurada, annuls all concessions previously granted to Russians in Persia hands over the Russian Discount and Loan Bank to the Persian Government, cancels all Persian debts to Russia, denounces all previous Russo Persian treaties, abolishes the "capitulations" as regards Russian subjects in Persia, and denounces all treaties made between Russia and third Powers regarding Persia.

Persia is mostly an arid table land, encircled, except on the east, by mountains, those in the north rising to 18,700 ft. The central and eastern portion is a vast salt desert. The only navigable river is the Karun, which was opened to foreign navigation from Moham Merah to Ahwaz in 1888. There are only 8 miles

of railway open, and travelling is mostly by caravans, and transport by pack animals. The cost of carriage is therefore, very heavy. An option for the construction of a railway from Khanik to Tehran via Kermanshah and Hamadan (with a branch to Enzeli on the Caspian) was granted in 1920 to the Persian Railways Syndicate.

The chief products are cereals, cotton, gums, dried fruits, silk, tobacco, and opium. The minerals (little worked) are salt, iron, coal, copper, lead, sulphur, &c., with turquoises. Oilfields in Southern Persia have been successfully worked by an English company since 1902. The only important manufacture is that of woollen carpets (mostly a domestic industry), but shawls, silks, and cotton fabrics are also produced. There are extensive forests in the north and west. Sheep and goats are numerous, and good wool is produced. The Persians are mostly Shiahs Muhammadans, but there are many adherents of Bahlam (an eclectic form of Deistic religions) and Armenian Christians. The laws and popular education are based on the precepts of the Koran. Persia is divided into provinces, of which the principal are under Governors or Governors General.

Owing to increasing popular discontent with a corrupt and incompetent administration and an extravagant Court, a nationalist movement began in Dec, 1905. In Aug, 1906, the Shah, Muzaffer ud Din, admitting the need for reforms granted a Constitution. He was succeeded in 1907 by his son Muhammad Ali Shah who was deposed by the National Assembly in 1909, to be succeeded by his son, Sultan Ahmad Shah (under the regency of Nasr ul Mulk, until 1914).

The revenue (£1,480,780 in 1913-14) is derived from land tax, Crown lands, customs, opium, salt, and lease of monopolies. The foreign debt of Persia amounted (Dec 31, 1916) to £6,325,700. British commercial interests in Persia much exceed those of any other country, the trade between the British Empire (including India and Mesopotamia) and Persia amounting to more than 80 per cent of the total trade of the country. The sea borne trade of Persia passes chiefly through the ports of Bushire, Bunder Abbas and Mohammerah, and via Baghdad and Duzdap. The shipping of the Persian Gulf is principally British.

Persia's Foreign Trade

(In thousands of kranes)

	Imports	Exports	Total
1913-14	647,165	455,840	1,103,005
1914-15	499,383	395,058	894,441
1915-16	614,108	377,125	991,233
1916-17	494,771	432,895	927,666
1917-18	468,066	328,714	796,780
1918-19	476,287	270,869	747,156
1919-20	629,793	367,817	997,610
1920-21	482,352	355,617	837,969
1921-22	609,775	508,044	1,117,820

The value of the kran has varied (since 1900) from 18 to 70 kranes to £1 sterling, in 1922-23 the exchange value was about 4½d.

In 1921-22 the leading imports into Persia were cotton fabrics, sugar, iron and steel goods and tea. The principal exports were heavy oils, benzine, petrol and fruits.

Peru is a maritime Republic of South America, situated between 1° 31' 20" and 19° 13' 9" latitude and between 69° and 81° 19' W. The territory between 17° 47' 9" and 19° 13' S is occupied by Chile as the result of the Pacific War of 1879-1882, in 1922 this "falsa" Africa question was submitted to arbitration by treaty between Peru, Chile and the arbitration is still in progress. The area of the Republic is estimated at 532,000 square miles, and the population (1922) at 5,550,000. It is bounded on the north by the republics of Ecuador and Colombia as the latter claims a territory in the Amazonian basin on the east by Brazil and Bolivia, and on the south by Chile and Bolivia.

Peru was conquered in the early 16th century by Francisco Pizarro (born 1478, died 1542), who subjugated the Incas (a tribe of the Quichua Indians), who had invaded the country some 500 years earlier, and for nearly three centuries Peru remained under the Spanish rule. A revolutionary war of 1821-1824 established its independence, declared on July 28, 1821. The constitution rests upon the fundamental law of Oct. 28, 1856 (amended Nov. 25, 1860), and is that of a democratic Republic under a newly drawn constitution of 1919. The President is elected for five years by direct vote of the people.

The country is traversed throughout its length by the Andes running parallel to the Pacific coast the highest points being Huascarán (22,050 feet) Huandoy (21,100 feet), Arequipa (or Misti) volcano (20,073 feet), Huallaga (20,000 feet), and Llama, Tuvora and Saraguro, all over 19,000 feet. There are four distinct regions, the costa, west of the Andes, the sierra or western slopes of the Andes, the punas or mountainous wastes below the region of perpetual snow, and the inward slopes (montaña) and boundless forests of the Amazonian basin. The coastal area lying upon and near the Pacific, is not tropical, though close to the equator, being cooled by the Humboldt Current. Its chief products are sugar, cotton, petroleum, wool, hides and skins, and it contains the chief towns and most of the white population. In the barren mountain section are to be found minerals in great richness and variety which await improved transport facilities before their production can be considerably increased. It is inhabited by Indians in a low state of civilisation. Upon the eastern slopes of the Andes are to be found very large tracts suitable for

cultivation and stock raising, at present almost wholly unexplored owing to lack of communication. This part of the country should show most interesting developments in the future. The tropical lowlands lie east of the Andes towards the borders of Brazil, and consist mainly of unexplored or little known country inhabited by Indians in a savage state. There are here dense jungles, of which the principal commercial product is wild rubber. The gold production in 1921 was valued at £326,458 and in 1920 at £265,972. The Lobos and other islands on the Pacific coast provide guano.

The principal imports are coal, cotton, woollen, linen and silk goods, drugs, earthen and stone wares, machinery, explosives, metals and manufactures thereof, oils, stationery, paper, manufactures, timber, and wheat. The chief exports are cane sugar, cotton, petroleum and copper. In Jan–June, 1923 the U.S.A. sent 36 per cent of the imports and took 34 per cent of the exports, while the U.K. sent 22.5 per cent and took 19 per cent.

The total length of the railways open (1920) was about 1,284 miles. In 1923 about 200 miles of new lines were under construction. There is also steam navigation on Lake Titicaca and the River Desaguadero. The eastern rivers are also navigated to some extent by steam craft. Wireless telegraphy stations have been established in many places.

Defence—The Army is recruited by voluntary enlistment, supplemented by conscription, and numbers about 5,000 of all ranks. The Navy includes two cruisers built at Barrow and a destroyer bought from the French Government and a submarine. There is a military aerodrome at Chorrillos (near Lima) and a seaplane station at Ancón.

Language—Spanish is the official language of the country, but native dialects (of which Quichua is the most important) are spoken by a considerable portion of the Indian population.

	1921	1922

The Republic of Poland was proclaimed at Warsaw in November 1918 and under the Treaty of Versailles (June 28, 1919) the assentors to the Covenant of the League of Nations and the signatories of the Treaty of Peace, guarantee the independence of the Republic, which is reconstituted within the limits of the 18th century Polish Commonwealth. This state extended in the year 1772 over an area of 740,000 sq. kilometres and included a population of about 13,000,000. The political neighbours of the Republic are the Baltic Sea, the German Republic (Prussian Königsberg District) and the Republic of Lithuania, in the N; the Republic of Czechoslovakia in the S; the Kingdom of Rumania in the E; Soviet Russia in the E and Germany in the W. The present area of the Republic may be estimated at 386,273 sq. kilometres, with a population at the 1921 census of 27,160,000 (of whom 28,660,000 are Poles, and 8,500,000 other nationalities). The predominant religion of the people is Roman Catholic, but all faiths enjoy equality, and there are a considerable number of Protestants and a very large number of Jews.

In 1919 hostilities broke out between Poland and Soviet Russia, and after initial successes the "Red" armies of Bolshevik Russia appeared (in August 1920) likely to deal a crushing blow at Polish independence, the capital (Warsaw) being in peril of capture. A dramatic counter attack by the Polish troops at the critical period reversed the nature of the campaign. Poland was enabled to conclude peace on favourable terms, and claimed the renunciation by the Soviet at Moscow

of about 220,000 sq kilometres, containing a population of about 2,500,000 (1,048,000 Poles).

GOVERNMENT—A Republican form of government was adopted by the Constituent Assembly in 1922, the Chief of State exercising the executive authority through a Ministry responsible to the Legislature. The Legislature consists of a Diet (*Sejm*) elected by universal adult (male and female) suffrage, and of a Senate elected by adult (male and female) suffrage of those over 30 years of age. The Constitution voted on March 17, 1921, is very Liberal.

PRODUCTION—Mining, cotton, metal work, agriculture, forestry and stock raising are the principal industries, the chief crops being rye, wheat, oats, barley, potatoes, and sugar beet. The live stock includes cattle, horses, sheep, and pigs. There are valuable coal mines in Upper Silesia, Congress Poland, and Little Poland (Galicia); zinc lead ore, mineral and potassium salts and in Galicia (Boryslaw) are famous oil fields, the output of crude oil (1921) was 831,700 tons (1920) 765,000 tons (1921) 704,870 tons. The chief manufactures are textiles, those of minor importance being machinery and metal works, chemicals, and leather. The exports in former years were principally agricultural produce and textiles, the imports being raw wool, cotton and jute, woollen and cotton goods, and machinery.

DEFENCE—The peace effective of the army is 17,000 officers and 250,000 other ranks. A small navy, for coastal defence is being organized.

EDUCATION—Education is compulsory and free, and there is considerable voluntary effort in addition to the work of the State. Secondary education is conducted on a high level with good attendances, and there are universities at Cracow (founded 1364), Warsaw, Lwow, Poznan, Lublin, and Wilno. Polytechnics at Warsaw and Lwow, and an Academy of Science at Cracow.

COMMUNICATIONS—There are about 10,000 miles of railway and over 25,000 miles of telegraph line, with well developed telephone systems in all the large centres. Over 4,000 miles of navigable waterways exist on the Vistula, Narew, Bug, Warta and Pilica, of which about 1,500 are navigable by steamers. The free city of Danzig is within the Polish Customs area, free transit for Germany being guaranteed.

FINANCE—The revenue for 1922 was estimated at 458,600,000,000, and the expenditure at 591,634,000,000, showing a deficit of nearly 123 milliards of Polish marks, which will be partly met by a loan and partly by credit operations. In accordance with laws of Feb. 26, 1919, and Sept. 26, 1922, a new currency (*Zloty*) is being considered, the *Zloty* being of the value of one 300th of a kilogram of gold.

CAPITAL, WARSAW, on the Vistula (which is spanned by four magnificent bridges) contains many fine buildings, population 1921, 931,176. Other large towns are Lodz (451,000), the centre of the textile industry, Lwow or Lemberg (229,000), Posen on the Warta (170,000), Cracow, on the Vistula (128,000), Vilna (129,000), Bialistok (77,000), and Sosnowice (86,700).

11 Portland Place, W. 1

Portugal lies in 37°—42° 8' N lat. and 6° 15'—

9° 30' W long. being 360 miles in length from

N to S, and averaging about 100 in breadth

from E to W. Continental Portugal contains

an area of 35,500 square miles with a population

in 1920 of 6,399,355 and the Portuguese Colonies

a total area of 804,841 square miles, with a popu-

lation estimated at 9,675,000. The Azores and

Madeira are regarded not as colonies, but as

a part of continental Portugal. The chief

products are wheat, barley, oats, maize, flax,

hemp, and the vine in elevated tracts, in the

lowlands, rice, olives, oranges, lemons, citrons,

figs, and almonds. There are extensive forests

of oak, chestnut, sea pine, and cork, the culti-

vation of the vine and the olive being among

the chief branches of industry, the rich red

wine known to us as "port" is shipped from

Oporto. Its mineral products are important—

copper, lead, tin, antimony, coal, manganese

iron, slate, and bay-salt, which last, from its

hardness and purity, is in demand. Its manu-

factures consist of gloves, silk, woollen, linen

and cotton fabrics, metal and earthenware.

goods, tobacco, cigars, &c. The exports consist to the extent of 50 per cent of wine which is the chief industrial product of the country. Others are cork, cattle, copper ore, fruits, oil, sardines, and salt. The imports are manufactured goods—hardware, cotton and woollen stuffs, machinery, wheat, sugar, dried fish, coal, &c. The commercial marine (1917) numbered 104 steam and 102 sailing vessels, with a tonnage of 125,966. In 1918, 5,566 vessels, of 3,284,995 tons, entered the ports of the Republic. Railways 1,827 miles in extent were open for traffic in 1917, and there were 351 miles of telegraph line in 1917. For many years the national income was considerably less than the expenditure, this deficiency has added to the national debt.

Defence—Service in the militia is universal and compulsory. The peace effective is about 32,000. War strength, about 150,000. The Navy consists of 1 coast defence ship, 4 protected cruisers, some old pattern gunboats, 4 destroyers and 3 submarines and 4 gunboats, acquired in England (1900), and 6 ex-Austrian destroyers, manned by about 4,800 sailors.

Education is free and nominally compulsory between the ages of 7 and 15, but is not strictly enforced, and over 75 per cent of the population above 7 years old are illiterate. Secondary education is conducted in State lycées. There are also military, naval and other special schools. The University of Coimbra (founded A.D. 1291) had 1,500 matriculated students in 1910.

Revenue (estimate)	*\$79,287,855
Expenditure (estimate)	\$72,478,835
External debt (1921)	£36,000,000
Internal debt (1921)	*\$2,000,000,000

Imports	*\$260,553,375
Exports	123,373,250
Imports from U.K. (1922)	£4,600,000
Exports to U.K. (1922)	4,300,000

CAPITAL, Lisbon. Population (1920) 500,276. Oporto had a population (1920) of 215,330.

Rumania is a kingdom of South Eastern Europe in the classical *Dacia* and *Scythia Pontica* the territory roughly defined by the three great rivers Danube, Theiss, and Dniester whose central point is the line of the Carpathians. The territory is known as Wallachia, Moldavia, Bessarabia Bukovina, Transylvania, with parts of the Banat, the Dobruja, Crizana and Maramuresh. The kingdom has its origin in the union of the Danubian principalities of Wallachia and Moldavia (and the addition thereto of a strip of Southern Bessarabia) under the Treaty of Paris (April, 1856). The principalities remained separate entities under the suzerainty of the Turkish Empire until 1859, when Prince Alexander John Cuza was elected Prince of both Principalities, still under the suzerainty of the Porte. Prince Cuza abdicated in 1866 and was succeeded by Prince Charles of Hohenzollern Sigmaringen, in whose successors the crown is now vested. By the Treaty of Berlin (July 13, 1876) a new Principality (consisting of the two above mentioned) was recognised as an independent State, and part of the Dobruja (which had been occupied by the Rumanians) was incorporated in the new Principality. On March 27, 1881, the former Principality was recognised by the Great Powers as a Kingdom. Rumania is not a "Balkan" State. She took no part in the military operations of the Balkan League against Turkey in 1912-13. Her unexhausted military power secured for her a readjustment of her south-eastern (Dobruja) frontier in 1913. In the War of 1914-1918, Rumania

fought on the side of the Allies from Aug. 27, 1916, and after many vicissitudes (due mainly to the sudden collapse of the Russian Armies in 1917), she emerged in triumph at the cessation of hostilities. Her territories were greatly increased as a result of the War, and the *ante bellum* area of the Kingdom (53,000 sq miles) was more than doubled by the inclusion within its borders of Bessarabia, Transylvania, Bukovina, and part of the Banat of Temesvár. The area of the enlarged Kingdom of Rumania may thus be estimated at 122,282 sq miles, and the 1924 population of 7,000,000 has been increased to 17,000,000. The dominating religion is that of the Greek (Orthodox) Church.

GOVERNMENT—The government is that of a Constitutional Monarchy the legislative assembly consisting of a Senate (56 members) elected for 8 years, and of a Chamber of Deputies (361 members) elected for 4 years by universal suffrage, provision being made for the proportional representation of minority parties. The executive is entrusted to a council of ministers.

PRODUCTION—The soil of Wallachia, Bessarabia, and Moldavia is among the richest in Europe, and it was stated in August, 1921, that "from a comparative point of view Rumania would probably be one of the first war convalescents to attain complete recovery. The wheat crop for 1922 was 2,504,045 metric tons. The agricultural produce consists of wheat, maize, millet, oats, barley, rye, beans and peas. Vines and fruits are abundant. The fertile plain of Transylvania yields large crops of maize, wheat, rye, oats, flax and hemp, and the rich lands of Bessarabia produce wheat, maize, barley, flax, tobacco, water melons, fruit and grapes. Agriculture and sheep and cattle raising are the principal industries of the kingdom, but the climate of this part of South Eastern Europe is of the Continental character, with intense winter cold and summer heat, and fierce summer droughts sometimes defeat these principal industries. The forests of the mountainous regions are extensive (11,888,792 acres) and the timber industry is important. The country is rich in minerals, and produces petroleum, salt, coal, lignite, iron, gold, and mica. The workers in the oilfields number about 50,000 and are the largest single unit of workers in any one industry, the production of petroleum was 1,385,225 tons in 1913, 2,168,414 tons in 1921, and 2,368,000 tons in 1922. Manufactures are in their infancy, and the imports are chiefly the manufactured goods of Western Europe, the exports consist principally of wheat, barley, maize, oats, petroleum, timber, cattle, salt and hides. All estates over 100 hectares have been expropriated and divided among the peasants.

DEFENCE—Service in the Army is universal and compulsory. In the War of 1914-1918 over 900,000 all ranks passed into the Armies of Rumania, and of this number over 25 per cent were killed or returned as "missing." At the resurgence of Nov. 1918, an army of 400,000 was again in the field. This force was the deciding factor in the Rumanian-Hungarian question, and it drove the Bolshevik dictator (Bela Kun) into exile from Buda Pest. There is a small Navy on the Black Sea (30 vessels) and on the Danube.

EDUCATION is free and nominally compulsory, there being 19,374 schools with 1,612,776 in attendance. Secondary schools are well attended. There are also special schools and

Universities at Bucharest, Jassy, Cluj, and Cernauti. A Government High School of Commerce was opened in 1913.

COMMUNICATIONS—In 1919 there were about 7,131 miles of railway open for traffic in the whole kingdom, railway communication requires great development in order to cope with the problem of carrying the cereal crops to the shipping ports. There are 19,715 telegraph and telephone offices. The mercantile marine consists of about 120 steamers and 600 sailing vessels. The Black Sea ports are Sulina and Constantza; the latter is linked with the interior by a railway.

Budget revenue	1928-29

 " Vice Consul, T. Woodhouse (acting).

The Union of Socialist Soviet Republics—The Union covers the greater part of the area of the former Russian Empire, from which the independent states of Finland, Poland, Estonia, Latvia and Lithuania have also been formed. The greater part of the remaining territory forms the Russian Socialist Federal Soviet Republic, which is in union with other Soviet Republics in Russian territory to form the Russian Union. The total area of the Union is approximately 8,000,000 square miles, with a population (partly enumerated and partly estimated) in 1920, of 136,000,000. Prior to the War of 1914-18 the Russian Empire of the Tsar Nicholas II covered more than 8,500,000 square miles, with a population of about 183,000,000.

The constituent Republics of the Union are—

Republic.	Sq miles	Population.
I Soviet Russia	7,616,000	100,000,000
II Ukraine	175,000	26,000,000
III White Russia	23,000	1,750,000
IV Transcaucasia	75,000	6,000,000
V Bokhara	65,000	1,450,000
VI Khiva	26,000	800,000
	8,000,000	136,000,000

The Union is governed by the All Russian Congress of Soviets, which meets annually and elects a Central Executive Committee (Tzik) of 370 members. The Tzik meets every three months for fourteen days, and between the sessions the supreme power in the Union is

Employed (a) on Brit. Commercial Mission, Moscow; (b) at Vladivostok; (c) Russian Claims Dept. E. of Trade; (d) Constantinople; (e) Dept. Overseas Trade, London.

exercised by an executive committee (*presidium*) of 17 members

Chairman of Presidium, Kalinin
Secretary, Sapronoff

Representatives are elected to the All Russian Congress by indirect choice, each village *Soviet* sending representatives to a *Volost* (group *Soviet*) the *Volosts* to *Uyezd* (larger group *Soviets*, the *Uyezds* to provincial *Soviets*, and the last named to the All Russian Congress. The principal executive departments are the Supreme Revolutionary Tribunal, the Council of Commissars of the People and the Council of Labour and Defence. Counter revolutionary tendencies are repressed by the State Political Department, formerly known as the *Tcheka*, but since 1923 as the *G P U* (*Gosudarstvennoe Politicheskoe Upravlenie*)

I SOVIET RUSSIA

The Russian Socialist Federal Soviet Republic

Area and Population—The R S F S R. consists of Great, Little, East and West Russia and Siberia, of the associated Labour Communes of Karelia and the German Volga, of the associated autonomous Provinces of Voliak, Zirlansk, Kalmuik, Maruisk, Tchuvash, Kabarda, and Buryat, and of the associated autonomous Republics of the Crimea, Darghistan, Gorsky (Mountain Republic), Bashkir, Tartar Kirghiz and Turkestan. The total area is approximately 7,727,000 square miles, with a total population of about 102,250,000.

The R S F S R. arose from a military revolution in the Russian Empire during the Great War of 1914-1918. Involved in the War from Aug. 1, 1914, the forces of the Tsar fought against the Central Powers with varying success. On March 12, 1917, owing to the avowed hostility of the *Duma*, the Tsar Nicholas II abdicated, but the successor nominated by him was not admitted to power and a provisional government was set up under Prince Lvov. On May 16, 1917, this administration was taken over by a Republican Cabinet under Alexander Kerenski, but Kerenski failed to establish a settled government, and on Nov. 7, 1917, the "Military Revolutionary Committee" of the Petrograd *Soviet* seized the authority of government and transferred it to the All Russia Congress of *Soviets*. The Tsar Nicholas II, with the *Tsaritsa*, *Tsarevitch Alexis* (their apparent) and the Princesses (and such faithful adherents as remained to them), were arrested by order of the Kerenski Cabinet. They were subsequently captured by the Bolsheviks, and on July 16, 1918, the Tsar and his family and attendants were butchered in cold blood.

For many years prior to the Great War a sullen undercurrent of unrest had been noticeable in the Russian Empire particularly among the University students and the educated classes. The movement spread rapidly among the workers and peasants from about the year 1880, and was secretly organised in 1889 as the "Society for the Liberation of the People." The reforms originally demanded were neither anti-dynastic nor revolutionary, but impatient extremists endeavoured to hasten reform by violent means, and resorted to terrorism and assassination to achieve their aim, which was criticised as a desire to reduce rule to anarchy, and to substitute for existing authority '4 nothing,' as expressed in their nickname. This *Nihilism* was

kept in check by a large force of Secret Police, whose methods were generally arbitrary and frequently inhuman, arrest on suspicion of membership of a secret society, or of sympathy with Nihilism being followed by banishment for life or by penal servitude in the mines of Siberia. The opposing theories of government at the time of the revolution of 1917 were known as "Maximalist" and "Minimalist" rule, the *Soviets* claiming to represent the Maximalists or largest class, the Republican Cabinet being accused of representing only the *bourgeoisie*, or smallest (Minimalist) class. The Maximalists or *Bolsheviks* (*Bolshevik* = majority or "the masses") professed to act in the name not only of the people of Russia, but in harmony with a projected "Federation of the Proletariates of the World." The military revolution of 1917 was accompanied by a *débacle* in the field and many of the soldiers abandoned their arms and returned to their homes, while the armies of the Central Powers advanced victoriously into Russian territory, and after granting an armistice they imposed on the *Soviet* government the crushing conditions of the *Treaty of Brest Litovsk* (March 3, 1918) which remained effective until the military strength of Germany and Austria was broken by the Allies. The Bolshevik régime had been fostered by the Central Powers and was opposed by the Allies, who sent such naval and military help as could be afforded to various bodies who were stemming the tide of Bolshevism in Siberia (Admiral Kolchak), South Russia (Denikin) and North Russia (Tchaiskovski), mainly with a view to create a diversion on the eastern German Austrian front, and in response to a declaration of war by the *Soviets* against governments which were held by them to be representative of Minimalist rule and of the *bourgeoisie* they had pledged themselves to eradicate. But the victorious close of the European War caused a growing reluctance among the Allied Nations for further military adventures, and the reinforcements sent in 1918 were withdrawn during the autumn and winter of 1919 from Archangel and Murmansk in the North, from Odessa in the South, and from Vladivostok in Siberia. The withdrawal preceded a collapse of the White resistance to the 'Red' (Bolshevik) armies. In 1920 war broke out between the Republic of Poland and the *Soviet* armies, in conjunction with operations under General Wrangel, the successor of Denikin in the South. After initial successes the Polish armies were driven back and Warsaw appeared to be in imminent danger of capture, when a dramatic recovery saved the Polish capital and brought about negotiations for peace on terms favourable to Poland, under the *Treaty of Riga* (March 19, 1921).

Government—The Central Government of pre-war Russia was an absolute autocracy, the country being regarded as the estate of the autocrat and the public revenue as his private income, from which the expenses of administration were

* Bolshevik propaganda work has been extensively carried on in Europe and the United States, but has gained few adherents in democratic countries. The principal agency for Bolshevik propaganda abroad is the *Rosta* (Russian Telegraph Agency) which has at its disposal considerable sums derived from the nationalisation of the banks and commercial houses of the *bourgeoisie*. Personal propaganda is directed by Koppelmann Semenov. In 1922 the sum of £75,000 was offered by the *Soviet* government as a subsidy to the London Labour organ, *The Daily Herald*, but was refused by the directorate.

met. Reforms of various kinds were introduced from time to time. The peasants, who constituted 75 per cent of the inhabitants, were freed from the condition of serfdom in 1861 by the Tsar Alexander II and land was allotted to them in communal ownership and in 1906 the Imperial Duma (parliament), elected under the tentative constitution, was opened by the Tsar, but it possessed little authority and its recommendations were usually ignored, while it was liable to be dissolved at the will of the Tsar. The government in force at the outbreak of the War in 1914 was "Constitutional" in name alone as the limits to the power of the ruler were subject to the possibility of an immediate and complete resumption of the former autocracy, at the will of the autocrat. The Soviet government, although composed of representatives indirectly elected by the masses, does not appear to be truly representative, as no provision is made for "the opposition" to the executive power, only candidates approved by the G P U (or *Tcheka*) having a chance of success at the elections. It also appears that individual liberty is considerably less than in the time of Tsardom while freedom of speech and the liberty of the Press are definitely denied to the people.

Local Government was, and still remains, highly developed. In the rural districts of Imperial Russia there were village councils under the presidency of a *starosta* (mayor), villages being grouped into provinces and thus into governments, with larger elective councils for the administration of local affairs. Combined with this system of village communities was a highly organised system of co-operative trading the villagers being grouped by voluntary association into districts usually corresponding with local government areas. The produce of the soil was disposed of in return for manufactures obtained by the Society and distributed at the Co-operative shops. Municipalities were also administered by elective councils under the presidency of a mayor, but in many cases the local authority of such municipalities was overshadowed by the superior authority of the military governor. After the revolution, the village and other communities set up *soviets* of workers and peasants, and the provincial *soviets* send representatives to the All Russia Congress, municipalities having a double representation from their own *soviet* and from that of the province in which the municipalities are situated.

Education was not widespread in the Tsar's dominions. Primary schools afforded only the most elementary instruction, and the attendance was voluntary, while they were closed in rural districts during the summer months. Secondary schools existed only in the great cities, and the eleven universities had only 40,000 students of both sexes. Fully 90 per cent of the peasants (i.e. 75 per cent of the people) were illiterate. A rural *starosta* who could neither read nor write was in no way unusual, and accounts were frequently kept for the local branch of the Co-operative Society by the village schoolmistress or by the priest, the *abacus* being employed by the shopkeeper for simple additions of roubles and kopeks by means of movable balls (of different colours) on a wire frame. Under the Bolshevik régime popular education is administered by a commissar, in whose charge have been placed all educational institutions and theatres, museums and galleries; the education of the workers in the towns is facilitated by

lectures and school teaching, but among the peasants in the rural districts even the inadequate provision formerly made has in most places been discontinued, and future generations of peasants will contain an even larger proportion of illiterates than those of Imperial Russia. In 1922 there were stated to be 5,000,000 pupils in the 55,000 elementary and secondary schools, and about 300,000 in 4,000 advanced and technical schools while there were (in 1922) two universities in Moscow, and one in each of twenty other large centres. The Orthodox Church was disestablished by the Bolsheviks and all its property confiscated. On Feb 14, 1918, the Soviet government adopted the Gregorian (Western) Calendar.

Finance—The finances of Soviet Russia have reached a chaotic state from which they are unlikely to recover for many decades. Communism declared war on capital and capitalists declined to risk money in Russian industrial enterprises, which have been financed by paper money from the government printing presses. These presses also provide payment for the army and the government officials, until the paper rouble, which was exchanged at about ten to £1 sterling in 1914 had ceased to possess any real value, after reaching grotesque quotations of four millions to the gold rouble and 40 millions to £1 sterling. Before the War the annual revenue of the Empire was about 3,500,000,000 roubles (at the 1914 rate of exchange 948 roubles = £1 sterling). The estimates of Soviet Russia for 1918-1921 are as under in paper roubles—

	Revenue	Expenditure
1918	15,800,000,000	46,700,000,000
1919	50,600,000,000	125,800,000,000
1920	150,000,000,000	1,150,000,000,000
1921	4,139,900,000,000	26,000,000,000,000

Debt—The outstanding Foreign Debt of Russia on Jan 1, 1917 (before the Revolution), with the annual charge for interest, may be stated as under—

	Debt.	Interest.
To Great Britain	£69,674,405	£34,000,000
To France	Francs 3,929,000,000	Francs 828,700,000
To U.S.A.	\$22,126,011	\$20,200,000
To Japan	1 in 250,000,000	1 in 20,700,000
To Italy	Lira 36,123,836	
To Netherlands	Guilders	Guilders 59,200,000

In Aug 1914 there was a gold reserve in the State bank to the value of £176,000,000, but this is believed to have been expended by the Soviet government, together with all the balances requisitioned from other sources. All internal and external obligations of the State have been repudiated. All banks and financial and trading concerns and shipping enterprises have been declared to be the property of the proletariat, and the balances and credits have been dissipated by theft or neglect. Private ownership of land has been abolished and all real estate has been declared proletarian property.

Defence—The Red Army consisted in 1923 of about 725,000 all ranks, including 37 cavalry brigades of about 3,000 men and about 30,000 sailors serving on land. The Red Air Fleet is reported to consist of about 250 aeroplanes, but it is stated that an organization of 10,000 aeroplanes is aimed at for the year 1924. The Red Navy is believed to consist of four capital ships and about thirty destroyers and small fighting craft.

Production and Industry—All production and industry in Soviet Russia has been nationalised.

824 Foreign Countries—Russian Union, Soviet Russia, Ukraine

An exodus of workers to the agricultural districts followed the disorganization of industrial enterprise, and agriculture has also been affected by compulsory requisition of produce from peasant cultivators. In 1921 a new economic policy was inaugurated of leasing industrial establishments to private enterprise and of taxation in lieu of requisition of agricultural produce, but lack of confidence and of capital restricted manufacture, and the peasants appear disinclined to cultivate grain for the purpose of paying taxes. Agriculture outweighs all other industries in importance the principal crop being rye, the food of the people wheat the second largest crop, was formerly exported in great quantities and owing to the breakdown of the railways of Russia it has been found necessary to export wheat from the south and to import it by sea for other parts barley, oats, millet and maize are also important food crops and potatoes are largely grown. About one million tons of sugar were grown in 1923. Among the important industrial crops are flax and hemp and cotton, but the 9,000,000 spindles working in the cotton industry in 1923 have dwindled to half that number and the output is less than one sixth of pre revolution years. The chief mineral output is petroleum, the total in 1922 being nearly 5,000,000 tons the chief metals produced in 1922 were gold 90,500 oz, and platinum 16,052 oz. The live stock included (1922) 24,000,000 cattle, 28,000,000 sheep, 6,750,000 pigs, and 25,000,000 horses.

External Trade.—In 1924 the Imports into Russia were valued at 2,100,000,000 roubles and the Exports from Russia at 960,000,000 roubles a total trade (at 9458 roubles=£1) of £277,480,000, the chief imports from the United Kingdom being machinery and coal, the exports to the U.K. being principally cereals timber eggs and flax. In March 1922 the Tenth Communist Congress met at Moscow and Ulianov Lenin is reported to have declared his abandonment of Communism and conversion to the principle of natural economic development under trade treaties with Great Britain and such other Powers as can be induced to enter into similar obligations. At the Genoa Conference (May, 1922) the Bolshevik delegates failed to give assurances as to the attitude of the Soviet Government, and negotiations for loans and trade relations were abortive.

In 1921 the total trade of Russia was about one tenth of that carried on in 1913. Russian imports were derived as to 25 per cent from Great Britain, 24 per cent from Germany, 15.8 per cent from U.S.A., and 10.1 per cent from Norway and Sweden. The exports were sent as to 47.9 per cent to Great Britain as 7 per cent to Latvia, 12.9 per cent to Norway and 5 per cent to Germany. Soviet Russia's amended trade statistics for 1922 show the weight of imports at 265,790,000 pounds, against 56,110,000 pounds in 1921, and exports of 56,340,000 pounds, against 12,960,000 pounds. Of the imports, 39,170,000 pounds were relief goods, against 3,120,000 pounds in 1921. The largest imports were from Great Britain, with 41,080,000 pounds, the United States 23,120,000 pounds, Finland 24,290,000 pounds, and Germany 24,060,000 pounds. As buyers from Russia Great Britain led with 28,440,000 pounds, Germany 8,320,000 pounds, Finland 5,260,000 pounds, and Latvia 5,420,000 pounds. Germany's real share in both directions is greater than the figures show, as part of her

trade with Russia is booked to the transit countries.

Imports from U.K.	1921 £1,181,000	1922 £3,679,000
Exports to U.K.	2,695,000	8,176,000

Communications.—There were (1922) 48,504 miles of railway in use, and (in 1923) 15,661 post offices carrying 2,663,000,000 letters, &c, and 476,177 miles of telegraph wire. Under Soviet administration the financial deficit on the working of the railways has increased in proportion as transport conditions have deteriorated. In 1928 the deficit was 6,000,000,000 roubles in 1929 more than twice that amount, and in 1930 it was 51,000,000,000 roubles. The principal railway lines are the main European network from Petrograd through Moscow to Astrakhan and across the Urals via Perm, Ufa, Samara and Saratov, with northern extensions to the Kola Peninsula and to Archangel and running southwards to the Baltic the Crimea and the Caucasus the *Trans Siberian Line* from Chelyabinsk on the Ural frontier to Omsk, and round Lake Baikal to Chita and Styretensk. From Chita the line crosses the Manchurian frontier (as the Eastern China Railway) to Harbin and Vladivostok, where a northward extension runs to Khabarovka. The projected *Amur Railway* if completed, will connect Styretensk with Khabarovka and the Trans Siberian line will thus connect the western and eastern limits of Russia on Russian territory. The *Trans Caspian Railway* runs from Krasnovodsk (opposite Baku) to Askabad Merv, Bokhara, Samarkand Khokand and Andijan with a 200 mile branch from Merv to Kushk (near Herat) on the Afghanistan border. The *Orenburg Tashkent Line*, from the European boundary, across the Kirghiz Steppe to Kazalinsk, Perovsk and Tashkent, whence a short line connects with the Trans Caspian system. The *Trans Caucasian Line* runs through Georgia, Azerbaijan and Armenia, from Batum and Poti on the Black Sea, via Tiflis, to Baku, on the Caspian, where it is met by the European system of Rostov on the Don. From Tiflis branches run to Kars, and via Erivan to Mount Ararat on the Armenian frontier, and to the Persian frontier at Julfa. There are in European Russia about 150,000 miles of navigable rivers and canals and lakes, of which total about one fourth of the distance is navigable by steam vessels, a further eighth by sailing vessels, and nearly one third by rafts. In Asiatic Russia there are 85,000 miles of waterway, of which 80,000 miles are navigable. Some 175,000 persons were engaged in the traffic (1910), the vessels numbering (in 1910) 4,000 steamers and 23,000 sailing vessels. In 1906 the ships and rafts carried over 400,000,000 tons of goods. The principal seaports are Petrograd and Kronstadt on the Gulf of Finland, Sevastopol (Black Sea), Archangel on the White Sea, and Ekaterinsk in the Kola River (Murmansk), Vladivostok (Sea of Japan), and Petropaulovsk in Kamchatka.

Capital.—On March 24, 1918, the seat of Government was transferred from Petrograd to Moscow, which had a population in 1922 of about 1,500,000. PETROGRAD (before the War "St. Petersburg") the former Capital, founded by Peter the Great on the banks of the Neva in 1703, had a population in 1922 of about 1,750,000. Other centres are Saratov (240,000), Rostov (200,000), Astrakhan (200,000), Ivanovo Voznesensk (170,000), Samara (150,000), Orenburg (150,000),

Iula (135,000) Yaroslavl (130,000) Irkutsk (130,000), Nijni Novgorod (120,000) Vitebsk (100,000), Gomel (100,000) Tif (100,000), Perm (100,000), Vladivostok (100,000) Tseritsin (100,000), and Chita (80,000) Archangel had about 45,000 inhabitants in 1914

II—THE UKRAINE (Ukraine)

President of the Soviet of People's Commissars and Commissar for Foreign Affairs, M Tskovsky

On Nov. 21, 1917 the greater part of "Little Russia" consisting of the former governments of Chernigov, Kharkov, Kiev and Poltava (with Khaternoslav and Kheison in South Russia, and Podolia and Volynia in West Russia), was encouraged by Germany to declare itself independent as the *Republic of the Ukraine*. The new Republic was despoiled by Germany in 1917-18 and subsequently overrun by Bolshevik forces and a military and economic alliance was concluded between Soviet Russia and the *Ukraine Socialist Soviet Republic* (Dec. 28, 1920). The total area of the Republic is about 174,000 sq miles with a population of about 30,000,000. The chief town and seat of government is Kharkoff (pop. 1914, 260,000), other large cities being Odessa, the great port on the Black Sea (with a population in 1914 of 650,000) Kiev (pop. 1914, 600,000) Khaternoslav (pop. 1914, 180,000), Nikolayev (100,000) Kremenchug (100,000) Poltava (85,000) Elisavgrad (80,000) and Vinnytsa (50,000). The Ukraine is the great wheat-growing district of Russia and contains large deposits of iron ore and coal. Agriculture is the principal industry and there are large iron and steel works. Before the War of 1914-18 the exports from the Ukraine (wheat, sugar, hides, histles and wool) were of the annual value of about £75,000,000 and the imports (manufactured goods and machinery) about £50,000,000.

CAPITAL Kharkoff Population (1914), 260,000

III—WHITE RUSSIA

President of the Soviet of People's Commissars and Commissar for Foreign Affairs, M Tchervyakof

The independence of White Russia was recognised by Soviet Russia in 1919 and a military and economic alliance was concluded Jan. 16, 1921. The independent republic covers the former government of Minsk and parts of Vitebsk and Moghilev, and its area may be estimated at 55,000 sq miles with a population of about 6,000,000. The political neighbours are Lithuania and Poland on the west, and the Ukraine on the south. The capital is Minsk (pop. 120,000). Although bound by treaty to Soviet Russia, there is a political tendency towards the Baltic States and fusion with these is a possible result of the movement.

CAPITAL, Minsk Population, 120,000.

IV—TRANS CAUCASIA

Armenia or Hyastan.

President of the Armenian Soviet Republic, M Myanikov

Foreign Affairs Commissar, M Miravyan

Armenian Representative in London, Maj.-Gen. Bagaturian

Armenia occupies the uplands between the

Iranian plateau and Asia Minor and is bounded by the Black Sea on the N by Kurdistan on the S, by Azerbaijan on the E, and by Turkish Asia Minor on the W, and until the outbreak of the War of 1914-18 it was shared between Turkey (35,600 sq miles), Russia (20,587 sq miles), and Persia (6,518 sq miles). The rivers Euphrates, Tigris, Aras, Kur, and Tchorokh take their rise within its boundaries, and at the meeting of the former Turkish, Persian and Russian boundaries is Mount Ararat (17,160 feet), the traditional resting place of "Noah's Ark". In the uplands the climate is severe, but in the valleys and plains the soil is fertile, producing all kinds of cereals, cotton, rice, sesame, hemp, flax and tobacco. Sericulture (silkworm breeding), sheep breeding, and fruit growing, are capable of great development. Armenia has great mineral resources hardly as yet developed. Naphtha, sulphur, bitumen and nitre abound while the mountains yield salt (mineral and in solution), gold, silver, copper, lead iron and valuable marbles. There are also numerous hot and cold mineral springs (similar in nature to those of Vichy). The Armenian Church is the oldest established Christian church (Christianity having been recognised as the State religion in 300 and from the 5th century there is a national language and literature). On account of their religion the Armenians have suffered a general persecution by Islam particularly in the *vlayet* of Syvas, Itilis, Diarbekir, Mamuret el Aziz, Van and Erzerum where massacres have frequently been organised with a view to extermination. In 1915-17 there were wholesale deportations and massacres of the Christian population of Turkish Armenia while the Armenian Christians of Azerbaijan and of Russian Armenia were similarly treated by Turkish and Kurdish hordes. In 1918 the Supreme Council of the Allied Powers recognised the independence of the *Republic of Armenia* (area, 20,587 sq miles population 1,250,000). Under the Treaty of Peace with the Allies (May 21, 1920) Turkey recognised the independence of Armenia with its capital at Yilvan. In 1920 a Bolshevik movement set up the *Armenian Socialist Soviet Republic*, on the lines of the Moscow government.

CAPITAL, Erivan Population (estimated), 90,000

Georgia, or Sakartvelo

President of the Council of People's Commissars M Invali

Commissar for Foreign Affairs, M Stanidze
Chief of Affairs of the National Georgian Government (exiled by Soviet invaders), M Soumbasoff 58 Redcliffe Square, S.W. 20

A former Kingdom in Transcaucasia, with a history of more than 2,000 years as a State was annexed by Russia in 1801 in violation of the Treaty of Alliance of 1783. At the beginning of 1918 it regained its independence. The *Georgian Socialist Soviet Republic* comprises the former governments of Tiflis and Kutais, the districts of Zakathall, Sodchi, Sukhum and Batum, the total area (excluding the Province of Lazistan, now Turkish, and claimed by Georgia ethnographically), is about 45,000 sq miles with a population (1915) of 2,175,195. The Republic is bounded on the N by the Caucasian Mountains, on the S. by Armenia, on the E. by the Republic of Azerbaijan, and on the W by the Black Sea. It includes the important Black Sea ports of

Batum (pop 50,000) and Poti (pop 30,732) Other large towns are Tiflis, the capital (pop 124,356,000), Kutais (pop 85,151), Sukhum (pop 61,974), Tchiatur, the centre of the manganese industry, (pop 25,675) Dusheti and Signagi The Railway system of Georgia extends to 970 miles The trunk line 556 miles long, connects the Black Sea ports of Pito and Batum with Baku on the Caspian Sea. Batum and Baku are also connected by a petroleum pipe line The Republic is very rich in mineral resources such as manganese, iron, copper, silver-lead, petroleum, coal, &c It has over 500 mineral springs, partly unexploited, among them many containing sulphur and radium Its agricultural resources are also very considerable

British High Commissioner at Tiflis, Commander Luke, D S O, R N

Azerbaijan

President of the Soviet of People's Commissars, M Narimanov

Commissioner for Foreign Affairs, M Gusseyinov

Azerbaijan is a Transcaucasian Republic on the south western shore of the Caspian Sea extending from the Caucasus in the north to Persia in the south and from the Caspian on the east to Armenia and Georgia The former Russian governments of Baku and Elisavetpol and part of the Erivan government are now included in the Republic The Republic is in alliance with Soviet Russia against their "common enemy, the imperialistic bourgeoisie The area is about 50,000 sq miles, with a population estimated at 4 to 5 millions, of whom over 75 per cent are Muhammadans

The Capital is Baku (pop 250,000) on the shore of the Caspian Sea, the centre of the petroleum industry Baku is connected by railway with Batum (Georgia) on the Black Sea via Tiflis, and with Moscow, via Rostov Other towns are Elisavetpol (65,000), Derbent (35,000), Kuba and Shemakha. CAPITAL, Baku

V—BOKHARA

President of the Council of the Soviet of Nazars and Nazars for Foreign Trade, Khodjaef Feyzulla

Bokhara is a Central Asian Republic with an estimated area of 85,000 square miles, and a population of 1,450,000, the majority being Muhammadan Uzbeks The capital (Bokhara) is a station on the Russian Trans-Caspian Railway, and has a population of about 75,000 The principal products are rice, wheat, fruit, hemp, cotton, and silk Exports (mainly to Russia) are agricultural products and silk and cotton manufactures, imports are principally manufactured goods and sugar The Emirate was abolished in 1920 and the Emir fled to Afghanistan A Soviet Republic of Bokhara was established and its independence was recognised, by Soviet Russia by Treaty of March 4, 1921 CAPITAL, Bokhara.

VI—KHIVA

(Khorezm)

The National Soviet Republic of Khorezm, formerly the Khanate of Khiva, lies between Bokhara, Turkestan and the Kizhih Province, and has a total area of about 26,000 square miles, with a population of 800,000, of whom about half are nomads The country occupies the fertile delta of the Oxus and is highly productive The capital (Khiva) has about 20,000 inhabitants The independence of the Republic has been recognised by treaty with Soviet Russia (Sept 30, 1920) CAPITAL, Khiva.

SARRE TERRITORY

Under the Treaty of Versailles Germany renounced the government of the Sarre Basin in favour of the League of Nations, the government being entrusted to a commission of 5 members nominated for one year by the League At the expiration of 15 years from Jan 10, 1920 the population will be called upon to decide by a plebiscite the government under which they wish to be placed The total area is about 743 square miles, with a population of about 713,000 The chief towns are Sarrebruck (117,000) Neunkirchen (35,000) and Saint Ingbert (18,000)

SALVADOR

Republica del Salvador

President (1923-1927) Señor Dr Don Alfonso Quinonez Molina, assumed office March 1 1923 Vice President Señor Dr Don Pio Romero Bosque

Foreign Affairs, Education and Justice, Señor Dr Don Reyes Aulieta Rossi

Interior and Public Works, Señor Dr Don Rodolfo Schonenberg

Finance, Señor Dr Don Gustavo Vides

War and Marine, Señor Dr Don Pio Romero Bosque

Envoy Extraordinary and Minister Plenipotentiary to Gt Britain, Señor Dr Don Arturo Arguello Loucel (resident in Brussels)

Sec of Legation and Consul General in London, Señor Dr Don Pio Romero Bosque, Junior, 7 Union Court, Old Broad Street, E.C. 2

The Republic of Salvador extends along the Pacific coast of Central America for 170 miles with a general breadth of 43 miles, and contains an estimated area of 7,225 square miles, with a population estimated at 1,525,926 It is divided into 14 departments In 1921 there were 55,539 births (37 per 1,000) and 30,613 deaths (20 per 1,000), 10 per cent of the deaths being due to malaria

Salvador was conquered in 1526 by Pedro de Alvarado and formed part of the Spanish vice royalty of Guatemala until 1821 In 1840 the Republic broke away from the federation of Central American States The constitution rests upon the fundamental law of 1864 (revised in 1886), the President and Vice President being elected for four years by direct vote of the people, the President being ineligible for a successive term in either office

There are distinct areas in the low alluvial plains of the coast and the interior plateau, with a mean elevation of about 2,300 feet, broken in many places by volcanic cones of which the highest are Santo Ana (8,300 feet) and San Miguel (7,200 feet). The lowlands are generally hot and unhealthy There is a wet season (winter) from

May to October, and a dry season (summer) from November to April. Earthquakes are frequent and on June 8 1917, a series of seven shocks nearly destroyed the capital, and ruined the towns of Santa Tecla, Armenia, and Apopa. The volcano on Mount Salvador was actually in eruption in Oct. 1917, and a severe earthquake was experienced on April 28 1919, doing great damage to the capital.

The principal river is the Rio Lempa, which rises in Guatemala and flows into the Pacific with tributaries in the Santa Ana, Asaguate, Sumpul and Torola, the Lempa being navigable for most of its course by small steamers. In the eastern districts the Rio San Miguel rises near the Honduras boundary and flows into the Bay of Fonseca. The western boundary crosses the Laguna de Guiza, the greater part of which lies within the borders of Salvador, and in the centre of the Republic is the large volcanic lake Ilopango with a smaller lake, Coatepeque further west.

The chief industry is the cultivation of coffee sugar is also grown, as well as indigo rice balsam &c. The principal exports are coffee (80 per cent of total value) indigo tobacco, sugar gold and indigo. The chief imports are textiles, hardware and machinery chemicals and drugs. About 60 per cent of the imports are from the U.S. and 15 per cent from the U.K.

The total length of the railways is 262 miles. A British railway nearly 100 miles in length connects Acajutla with the capital and Santa Ana the coffee centre and a line from the port of La Unión to the capital was opened in 1922. The principal ports are Acajutla, La Libertad and La Unión.

There are 120 post offices and 234 telegraph offices with 7,400 miles of wire.

The language of the country is Spanish.

SAN MARINO

Regents, Two "Capitani Reggenti"
Consul General for San Marino to Great Britain,
Commandatore Melvill A. Jamieson, F.R.G.S.,
27 Cockspur Street, S.W. 1.

A small Republic in the hills near Rimini, on the Adriatic founded, it is stated, by a pious maron of Dalmatia in the 4th century, and governed by a Council of 60, of whom two are elected as Regents for six months (1 April and 1 October) being thereafter ineligible for office for three years. The area is 38 square miles, the population 12,036. There is an army of about 1,000. The city of San Marino (pop. 8,000) occupies the slope of Mount Titano, and has an impregnable castle where King Benarag of Lombardy took refuge in 950 A.D., a fine church and Government palace and a theatre. The principal industries are wine cereals cheese, oil and cattle raising, in addition to the utilization and export of gravel from Mount Titano and production of white and hydraulic lime at Carravalle. A Treaty of Extradition was concluded between the Governments of Great Britain and the Republic of San Marino on 16th Oct., 1899.

FLAG Two horizontal bands, white, blue (with coat of arms of the Republic in centre)
British Consul General E. Mervyn de Garston
(Leghorn, Italy).

SIAM

Muang Tai

King, Rama VI (Rajavong, Chulalongkorn) born Jan. 18 1880 succeeded October 23, 1910
Foreign Minister H. H. Prince Iraldoo (acting)
Minister Extraordinary & Minister Plenipotentiary,
in London, Piyabha Karavong, 23 Ashburn
Place S.W. 7.

Consul General (Vacant) Temporary Offices, 23 Ashburn Place S.W. 7.

The Kingdom of Siam or Muang Tai (area about 195,000 square miles population, 1922, 9,225,000) is a buffer State between British Burma and French Indo China, and its integrity is guaranteed by the British and French Governments by the Anglo French Agreement of April 1904. The King is an absolute monarch, and appoints his successor. There is an Executive Council of Ministers with an adviser in Foreign affairs (usually of American nationality), and a Financial adviser (hitherto always of British nationality) and since 1895 a Legislative Council of State consisting of the Ministers, eight royal princes and over twenty members appointed by the King, who has an absolute power of veto. A number of English, French, Italians, Danes, and Americans are employed in the various State departments. There is an army of nearly 50,000 men and a few small garrisons compulsory military service has been introduced. The Kingdom contains many Chinese (largely engaged in trade and industry), besides Shans, Laos, Malays, Burmese, and Cambodians and over 1,500 Europeans. The principal religion is Buddhism. Education is now under the Minister of Public Instruction. There are 394 public schools and 4,137 schools of all kinds, attended by 122,800 children. A University is in process of organisation.

The upper part of Siam is mountainous, the lower flat. Bangkok is the only much-frequented

port. Over two thirds of Siamese sea borne trade which centres at Bangkok, is with the British Empire, and is largely in the hands of British firms or of Chinese trading from Singapore and Hong Kong. German shipping which had held the lead in tonnage for many years past, has ceased to visit Bangkok since August 1914 and as a consequence there has been a large increase in Norwegian and British shipping. The chief products of Siam are rice, teak, and tin (from Lower Siam). The area under rice is being much enlarged by irrigation. There is a large number of rice mills, mostly in or near Bangkok. The teak industry in the great forests of N. Siam is mainly in English hands. In 1918-19 rice constituted 81 per cent and teak 3½ per cent of the exports from the port of Bangkok while hides and marine products are also exported in considerable quantities. Among imports are treasure cotton goods and yarn, silk goods, provisions, gunny bags, kerosene, sugar, opium, metals and metal wares, machinery &c. The general tariff rate is 3 per cent *ad valorem*. Burma imports teak and cattle overland from Siam and exports thither cotton and silk goods &c. Except tin, wolfram, rubies and sapphires there are no important mineral products as yet. About 1,200 miles of railroads (mostly State owned) are now open for traffic. Railways from Bangkok run to Korat (165 miles N.F.), (Chiangmai (820 miles N. of Bangkok), Petrin (40 miles E.) the southern line to Traung on the west coast of the Malay Peninsula, was open to traffic in October, 1916 and in July, 1918 was completed to the Kedah border where junction with the Federated Malay States Railway system was effected. There is through railway connexion between Bangkok and Penang and Singapore and the railway is being extended from Petrien to the Cambodian frontier. Good roads are few. There are 3,000 miles of telegraph lines.

SPAIN

(España)

King, Alfonso XIII., son of Alfonso XII and of Queen Maria Christina, born (and acceded to the throne) May 17, 1886, married May 31, 1906, H.E.H. Princess Victoria Eugénie Julia Ena Maria Christina of Battenberg (born Oct. 24, 1887).

Heir Apparent, H.E.H. The Prince of Asturias, Don Alfonso, born May 20, 1907

MILITARY DIRECTORATE (Sept. 1923)

President, General Primo de Rivera, Marquess de Estella

Members, Generals Adolfo Vallespinoza, Luis Heim sa Luis Navarra Dalmiro Rodríguez Antonio Mayandia, Francisco Gomez Jordana, Francisco Ruiz del Portal, Mario Muslera

Ambassador in London Excmo. Señor Don A. Merry del Val y Grosvenor Gardens, S.W. 1
Counsellor, Comte de Piadelle

1st Secretary, Señor Don Alberto de Aguilar
2nd Secretary, Señor Don José Ruiz de Arana, Vizconde de Mambila

3rd Secretary, Señor Don Luis de Silva
Attaches, Señores Don P. de Soto, Don Antonio de Vargas, Don P. T. de Zulueta, Don F. M. Pena, Marques de Murieta.

Military Attaché, Lt. Col. Don P. Rich
Naval Attaché, Lieut. Comm. Señor Don José Iglesias

Consul General, Excmo. Señor Don José Conde, 40 Trinity Square, E.C. 3
Vice Consul, Señor Don Pedro Lecuona.

A Kingdom situate in the south west of Europe between 36°-43° 45' N. lat. and 4° 25' E. - 9° 20' W. long. bounded on the south and east by the Mediterranean on the west by the Atlantic and Portugal and on the north by the Bay of Biscay and France from which it is separated by the Pyrenees and occupying the larger portion of the Great Iberian Peninsula. Its coast line extends 1,317 miles—712 formed by the Mediterranean and 605 by the Atlantic—and it comprises a total area of 106,700 English square miles, and an estimated population in Jan. 1923 of 21,682,222—110 to the square mile. The interior of the peninsula consists of an elevated tableland surrounded and traversed by mountain ranges—the Pyrenees, the Cantabrian Mountains, the Sierra Guadarrama, S. Moruna, S. Nevada, Montes de Toledo &c. The principal rivers are the Douro, the Tagus, the Guadiana, the Guadalquivir, the Ebro, and the Minho. The Constitution upon which the present Government is formed is dated 30 June 1876. Spain is rich in iron, copper and lead, its mineral resources are only partially exploited and principally by foreign capital under foreign direction. The country is generally fertile, and well adapted to agriculture and the cultivation of heat loving fruits—as olives, oranges, lemons, almonds, pomegranates and dates. The agricultural products comprise wheat, barley, maize, oats, rice, with hemp and flax of the best quality. The vine is cultivated in every province; in the south west Jerez, the well known sherry and tint wines are made; in the south east, the Malaga and Alicante. The principal articles imported are raw cotton, spirits, fish, wheat and flour, sugar, coal, timber, woollen manufactures, machinery and railway materials, hides, &c. The principal exports are wine, copper and copper ores, lead, iron ores, olive oil, raisins, oranges, cork, esparto grass, wool, salt, quick silver, grapes, &c. Trade was for many years mostly confined to France and Great Britain, but Germany had, before the war, become a serious competitor, while the United States and Belgium share an increasing proportion of Spanish trade. Home manufacture is protected by high customs duties.

In 1923 there were about 20,000 miles of railway open, and 69,400 miles of telegraph line

The sea going mercantile marine over 50 tons, on Jan 1, 1921, consisted of 621 steamers (121,817 tons) and 582 sailing vessels (101,285). In 1922, 19,032 vessels of 20,305,998 tons (displacement) entered and 16,741 vessels of 17,405,842 tons (displacement) cleared at Spanish ports.

Defence—The authorised peace establishment, including, forces in North Africa, was in 1922, 19,827 officers and 217,000 men (275,000 in 1921, owing to the situation in North Africa). War strength Field Army, first line, 300,000 second line, 450,000.

The Navy consists of 3 (15,700 ton) battleships and 3 modern cruisers, with 1 old battleship and 4 old cruisers there are also 7 torpedo boat destroyers, 20 torpedo boats, 7 submarines and 21 gunboats.

Educator, Primary, is nominally compulsory and mainly free, and is State aided, the public schools being maintained by local taxation. Many private schools are under clerical control, and supervision is lacking. Secondary High Schools are in each province, but the curriculum is defective. Universities at Barcelona, Granada, Madrid, Murcia, Oviedo, Salamanca, Santiago de Compostela, Seville, Valencia and Valladolid.

	1922-23	Fiscalis

BRITISH CHAMBER OF COMMERCE FOR SPAIN,
 8 Rambla de los Estudios, Barcelona (Branch,
 9 Calle Marqués de Cubas Madrid).
 Madrid, 1,150 miles, transit, 45 to 50 hours

The **BALÆARIC ISLES** are an archipelago of 15 islands in the Mediterranean the largest being Majorca Minorca, Iviza, and Formentera the total area is 1,935 square miles, with a population (1921) of 338,804. The archipelago forms a province of Spain, the capital being Palma in Majorca.

CEUTA which forms part of the Province of Cadiz, is a fortified post on the Moroccan coast opposite Gibraltar. The total area is 5 miles with a population of 35,219.

The **CANARY ISLANDS** are an archipelago in the Atlantic off the African coast, consisting of 7 islands and 6 uninhabited islets. The total area is 2,807 square miles with a population of 473,497. The Canary Islands form a Province of Spain the capital being Santa Cruz in the island of Tenerife.

Spanish Colonies

The Spanish Colonies (exclusive of Ceuta and the Canary Islands which form an integral part of the kingdom) consist of certain settlements and islands of Western Africa with a total area of close on 82,400 square miles and a population exceeding 275,000.

FERNANDO PO (*Fenando Póo*) lies in the Bight of Biafra in 3° 12' N lat. and 8° 48' E long., about 20 miles distant from the west coast of Africa, and is a mountainous island (Pico de Santa Isabel, 10,800 feet), with forests of oil palm, ebony, mahogany, and oak and sugar cane, cotton, and indigo. Cocoa coffee sugar tobacco, vanilla and kola nut are cultivated and large quantities of cocoa and other products are exported. Total population 20,650. The capital is Basile, and the largest town Port Clarence (1,500 inhabitants). Dependencies of the island of Fernando Po are—

Annobon Island (*Anno Nom*), in the Gulf of Guinea in 2° 24' S lat and 50° 35' E long. population 1,391.

Corisco Islands, consisting of Corisco, Bana Elobey Grando and Elobey Chico lie in Corisco Bay and export ebony logwood and other forest produce. Total population 96,072.

Fernando Po—British Vice Consul, A. C. Reeve (acting).

RIO DE ORO is a possession on the north west coast of Africa, between Cape Bogador and Cape Blanco, or approximately between 21° 20'–26° N lat., and extending eastwards to about 13° W long. The territory is part of the waterless Sahara, with a sparse population of wandering, Muhammadan Arabs, population 253.

Rio Muni (or *Spanish Guinea*) is a coastal settlement of West Africa between Cameroonian and French Congo (1° N–2° 10' N lat.) extending about 125 miles inland. The inhabitants are Bantu tribes, and the principal settlements are at the mouths of the Muni, Benito, and Campa rivers, and at Bata on the coast.

Spain exercises a protectorate over a part of Northern and of Southern Morocco (see pp. 809–10) and on the Moroccan seaboard are certain Spanish *presidios*, formerly used as convict settlements.

Melilla is a town on a rocky promontory of the Riff coast, connected with the mainland by a narrow isthmus. The population is 50,170.

Alhucemas is a settlement on the bay of that name and includes six islands population 322.

Pañón de la Gomera (or *Pañón de Velez*) is a fortified rocky islet about 40 miles west of Alhucemas Bay population 398.

The **Chafarinas** (or *Zaffarinas*) are a group of three islands near the Algerian frontier about 2 miles north of Cape del Agua population 318. *Jyn*, on the Atlantic coast of Morocco about 100 miles south of Agadir, affords access to the interior of south west Morocco, but has no great trade at present.

SPITSBERGEN *

The Spitsbergen ('Pointed Mountain') Archipelago lies between 76° 26'–80° 50' N lat. and between 10° 20'–32° 40' E long. with an estimated area of 25,000 square miles. The archipelago consists of a main island known as West Spitsbergen (12,000 sq miles) North East Land, closely adjoining and separated by Hinlopen Strait the Wiehe Islands separated from the main land by Olga Strait Barents and Edge Islands separated from the main land by Stort Fjord (or Wybe Jansz Water) Prince Charles Foreland, to the W Hope Island to the S E, Bear Island (70 square miles) 127 miles to the S with many similar islands in the neighbourhood of the main group.

The archipelago is generally mountainous and there are traces of extinct volcanic action. The highest points are Mount Newton (5,676 feet), Mount Poincaré (5,446 feet) in the N E and Hornumstind (4,690 feet) in the S of the main island. The coast is deeply indented by fjords, of which the largest are Kings Bay, Cross Bay, Ice Fjord Bell Sound Lowe Sound and Horn Sound in the W and Red Bay Ielfde Bay and Widje Bay in the N of these, Ice Fjord from the W and Widje Bay from the N the heads of which are only about 10 miles apart give access to the centre of West Spitsbergen.

The principal minerals are coal gypsum, oil and building stones. In 1917 the coal export was 40,000 tons and in 1918 60,000 tons (mainly to Scandinavia) the 1919 output is estimated at 100,000 tons. The archipelago is visited by whalers (but the industry is declining), and by hunters for seal and wild fowl.

Certain districts in the main island (West Spitsbergen) have been named as follows—King James Land and New Friesland (W and E of Widje Fjord) in the N Sabine Land in the centre and Forell Land in the S. There are settlements at Longyear City (on Ice Fjord) Davis City (on Lowe Sound) Green Harbour (at the S entrance of Ice Fjord) with a high power Telefunken wireless station (erected by the Norwegian Government) connecting with Europe and Coal Haven (in Kings Bay).

South (ape) is 370 miles from the Norwegian coast Ice Fjord is 520 miles from Tromsø, 650 miles from Murmansk and 1,400 miles from Aberdeen. Transit from Tromsø to Green Harbour (the postal station) 2½ to 3 days, from Aberdeen 5 to 6 days.

THE SUEZ CANAL

The Suez Canal—The *Compagnie Universelle du Canal Maritime de Suez* is an Egyptian company, authorised in 1856, and confirmed in 1866, with a capital of 200,000,000 francs in 400,000

* The spelling of the name with a z is a corruption of the true name.

shares of 500 francs each. The British Government acquired from the Khedive in 1875 a total of 176 500 shares (cost £4,000,000, value March 31, 1922, £19,740,122).

The Suez Canal was opened in 1869. The total length of the canal is 102 miles with a width of 45 metres (147 ft. 8 in.), having cost 804,701,506 francs to construct and enlarge the maximum draught of water allowed for vessels using the canal is 9.45 metres (31 feet). The average time for the transit through the canal is 15 hours 36 minutes. By a convention signed on Oct. 29, 1888, the canal was exempted from blockade and vessels of all nations, whether armed or not, are to be allowed to pass through it in peace or war. The management of the canal is entrusted to a council of 32 administrators of whom 10 are British (three representing H. M. Government and seven the shipowning interest).

British Directors: Lord Inchausti GCMG KCST, ACIE (Vice President of the Company) Sir Aubrey Brookebank Bart. Sir Fiedk Green KBE Rt Hon Sir R. S. Horne GBE KC I Harrison Hughes Oswald Sanderson Sir E Wyldbore Smith
Representing H. M. Govt: H. I. Austruther Sir Ian Malcolm KCMG Sir I. L. Davies KCB CVO

The following table shows the number and tonnage of vessels which have passed through the Suez Canal since 1914, with the percentage of British vessels—

Year	No of Vessels	Net Tons	British Tonnage
1914	4,802	19,409,495	66.5
1915	3,708	15,266,153	76.3
1916	3,110	12,325,347	79.6
1917	2,353	8,368,918	73.6
1918	2,522	9,251,601	79.5
1919	3,986	16,013,802	70.9
1920	4,009	17,574,657	61.7
1921	3,975	18,118,999	62.9
1922	4,345	20,743,245	64.5

The tonnage of the merchandise carried was 25,776,000 tons in 1913, 17,049,000 tons in 1920 and 21,360,000 tons in 1922. Details of the nationality of the vessels passing through the canal in 1922 are appended—

	No of Vessels	Net Tons	Per cent (Tonnage)
British	2,736	13,352,710	64.5
Netherlands	455	2,161,471	10.4
French	215	996,875	4.8
Japanese	170	998,386	4.5
Italian	225	858,011	4.1

Danish	61	279,838	1.4
Swedish	55	242,413	1.2
Spanish	12	46,437	0.2
Yugo Slav	12	43,709	0.2
Russian	10	40,938	0.2
Greek	10	31,989	0.2
Chinese	2	7,604	0.04
Egyptian	5	7,043	0.03
Syrian	6	3,888	0.02
Totals	4,345	20,743,245	100

The transit receipts in 1870 were 5,718,756 fr., and in 1922 166,845,419 fr.

The rate of transit dues as from March 1, 1923, is 7 fr. 75 c. per ton, and 5 fr. 25 c. for vessels in ballast.

The net dividends for the year 1922 amounted to 120 fr. on the ordinary 500 fr. shares, and 97.915 fr. on the Actions de Jouissance. In 1922, the dividends were 320 fr. and 298.88 fr., respectively.

The 2,736 British vessels included in the total for 1922 are grouped under the following categories—

	No	Net Tonnage
Merchant vessels	2,000	9,789,963
Mail steamers	207	1,360,444
Warships and transports	241	1,097,218
Government chartered vessels	56	292,453
Vessels in ballast	223	902,632
	2,736	13,382,710

SWEDEN

(Sverige)

King of Sweden of the Goths and the Wends, Gustaf V. born June 16, 1858, suc. December 8, 1907, mar. Sept. 20, 1881, Victoria, dau. of Grand Duke of Baden, born August 7, 1862 (and has issue 3 sons).

Her Apparent: Gustaf Adolf, Duke of Skaneateles, Prince born Nov. 21, 1882, married (1) June 25, 1905, H. R. H. the late Princess Margaret of Connaught (died May 1, 1920). (2) Nov. 3, 1923, Lady Louise Mountbatten, Princess of Battenberg.

Vice Consuls: F. Wennerberg, Harry Eriksson.

Swedish Church: Harcourt Street, Marylebone Road, W. 1.

Sweden comprises the eastern half of the Scandinavian peninsula, and comprises the capital and 24 governments, "Län," with an area of 173,121 square miles and a population, Dec. 31, 1922, of 5,987,520, nearly all Protestant. This area includes the great lakes of Hjälmaren, Mälaren, Vänern, and Vättern. Nearly 46 per cent. of the population are devoted to agriculture.

about 208,000 being owners and 50,000 tenants of the land they cultivate. The country for the most part is flat with pleasant undulations, rising in the north west to the Kolen Mountains, which separate Sweden from Norway, and may be divided into three separate districts—the northern forest central, mining the southern agricultural. The climate in the south is favourable for producing grain. The principal articles of cultivation are the various cereals—oats rye barley, wheat—and potatoes. The forests are very extensive, covering one half of the surface of the country, and consisting of pine birch fir these are of great importance supplying timber pitch and tar and the chief fuel of the country in addition to sulphite and mechanical wood pulp for the paper making industry. The mineral products are extremely rich iron of excellent quality that known as the Dannemora iron being converted into the finest steel gold and silver in small proportions copper lead nickel zinc cobalt alum, sulphur, porphyry and marble. There is a railroad opening up the rich iron ore districts of Lapland, and mineral trains run from Gellivare and Kiruna to Umeå on the Gulf of Bothnia and to Narvik on the Atlantic. Considerable mines of coal are being worked in Scania. The chief imports are coffee wine tobacco, and other ordinary colonial produce coal cloth yarn wool cotton skins manure, iron fish oils, wheat, rye, pork, and machinery. The chief articles of export are timber butter iron, steel wood pulp, paper matches stone, iron and zinc ores &c. In 1921 the exports of paper were 183,700 tons, and in 1922 the exports were 273,134 tons.

Railroads 9,521 miles in length (of which 3,495 are the property of the State) were open on Jan 1 1923, and 49,700 miles of telegraph wires (inclusive of 22,150 railroad telegraph wires) 147 stations and 1,915 railroad and 1,421 other telegraph stations. There were at the same date 435,000 miles of telephone wires.

Defence—Service in the Army is universal and compulsory. The peace effective is about 104,000 trained men. The first line can be raised to war strength of about 140,000 second line 95,000. The Navy consists of 59 fighting vessels (410 guns) 13 being ironclads with submarines, submersibles, and some training ships &c.

Education—(i) Primary (compulsory and free) illiteracy rate maintained by local taxation with State grants. Attendance good. (ii) Secondary Well developed schools numerous and efficient. (iii) Special schools make a feature of technique and navigation. (iv) Universities Lund, Uppsala, and private faculties in Stockholm and Gothenburg.

The Helvetia of the Romans a Federal Republic of Central Europe, situated between 45° 50'–47° 48' N lat and 5° 58'–10° 30' E long It is composed of 22 Cantons, of very dissimilar size, united under a Constitution dated 29 May 1874, and comprises a total area of 15 950 square miles with a population of 3 888 320 in 1920 who are divided between Roman Catholics 40 per cent and Protestants 59 per cent, few numbering 7 400 and others 11 000. The population is formed by three nationalities distinct by their language as German 71 per cent, French 21 per cent Italian 6 per cent and Romansh (Grisons) 1½ per cent It is the most mountainous country in Europe having the Alps covered with perennial snow and glaciers rising from 5 000 to 12 123 feet in height not only along its southern and eastern frontiers but through out the chief part of its interior and the Jura mountains in the north west Agriculture is followed chiefly in the valleys where wheat oats maize barley flax hemp and tobacco are produced and nearly all English fruits and vegetables are grown The forests cover about one sixth of the whole surface The manufactures consist chiefly of silks cottons linen lace thread woolsens &c clocks and watches have long been the staple products of Geneva and Neuchâtel while leather gloves pottery tobacco and snuff cheese &c are made In 1924 there were 3 530 miles of railway in working order 17 323 miles of telegraph line 317 403 miles of telephone line and 2 099 post offices the profit on the railways in 1920 was 47 300 000 francs

The legislative power is vested in a Parliament consisting of two Chambers a National Council of 198 members and a Council of States of 44 members both Chambers united are called the Federal Assembly and the members of the National Council are elected for three years an election taking place in October The executive power is in the hands of a Federal Council of 7 members elected by the Federal Assembly piecemeal over by the President of the Confederation The President has a salary of 27 000 francs the Vice President and other members of the Federal Council 25 000 francs each The members of the Federal Council are elected for three years each year the Federal Assembly elects from this council the President and the Vice President they are elected for one year the five other members for three years Not more than one of the same canton may be elected member of the Federal Council

Defence Militia Active Army, 22 yrs initial trg 65–90 days Subsequently 11 days per annum then Landwehr, 2 yrs 1 trg 11 days for disarmed branches only then Landsturm to age 48 War Strength, 140 600 Landwehr, 65 000 Landsturm, 57 000

Education—Control by cantonal and communal authorities No central organ Illiteracy rare in Protestant cantons (i) *Primary* Free and nominally compulsory but attendance is not strictly enforced in the essentially Roman Catholic cantons School age varies (ii) *Secondary* Age 12–15 for boys Schools numerous and well-attended and there are many private institutions (iii) *Special schools* make a feature

SYRIA, LEBANON AND CILICIA

French High Commissioner, Général Weygand
Syria—British forces together with small French and Arab detachments, drove the Turks out of Syria and Lebanon in 1918, and occupied those districts and the district of Cilicia By decision of the Supreme Council of the Allies the districts in question were entrusted to France, to be administered under a mandate

The Emir Feisal (son of the King of the Hedjaz and, since 1921, King of Iraq) had from the outset assumed the administration of the districts of Aleppo, Hama and Homs, which had been assigned as Independent Arab districts under an earlier agreement of May, 1916, between France and Great Britain (the *Sykes Picot Agreement*), and it was intended to allow the Emir to remain under French guidance, but on March 8, 1920, the

* Estimated

"Syrian Congress" at Damascus declared Syria independent, and the Emir Feisal was crowned King of Syria. The action of the Syrian Congress did not receive the sanction of the Allied Powers and General Gouraud occupied Damascus, Aleppo, Hama and Homs. The Emir Feisal left the country and afterwards became King of Iraq (q.v.). The French Mandatory Zone was first divided into the four autonomous states of Great Lebanon, Damascus, Aleppo and the Alaouites (the region round Latakia), each having a French adviser responsible to the High Commissioner at Beyrout. The latter three states have now been grouped together to form the *Syrian Federation* with a nominated Council. The actual form of government differs in each of the states but the guiding principle in each is real and effective French control.

Syria is a geographical term for part of the former Turkish territories in Asia Minor and its Northern limits are still undefined. The present temporary Northern boundary between Syria and the territory occupied by the forces of Mustafa Kemal Pasha (the leader of the Nationalist movement in Asiatic Turkey) was defined in the agreement between France and the Kemalists and is roughly as follows:—From a point immediately S of Payas (on the Gulf of Alexandretta) to Meidan Ekbes (the railway station and environs remaining in Syria) thence S E to the railway station of Tichoban Bey, leaving the districts of Marsova to Syria and of Karnaba and Killis to the Kemalists thence along the Baghdad Railway to Nussebin and along the old highway to Jizireh Ibn Omar on the Euphrates (the districts of Nussebin and Jizireh Ibn Omar remaining in Kemal territory, with the roadway between these two places). The E. boundary separates Syria from Mesopotamia along a line running roughly N E from the E. side of Jebel Druze to a point 15 miles S E of Jezireh Ibn Omar (80 miles E of Mardin) the S boundary follows a line from Ras el Nakoura on the coast N of Akko and running S E by E. to the Hedjaz railway line S of Nasib, with a projection northwards to include the head waters of the Jordan, the Hule Lake and the Lake of Tiberias being included in Palestine. Within these limits the estimated area is 100,000 sq. miles, with a population of about 3,000,000, of whom the greater number are Orthodox Muhammadans, with a proportion of Shiites and Druses. The products of Syria are wheat, tobacco, fruit, wine and silk, but there is little cultivation without irrigation, the inland districts being cut off from the moisture laden winds by a mountain barrier, running parallel with the coast. The mineral wealth is believed to be unimportant, but there is a certain amount of bitumen. The principal Syrian towns are Damascus (est. pop. 300,000), Aleppo (250,000), Homs (70,000), and Hama (60,000). The administrative capital is at Beyrout (Grand Lebanon). Damascus contains the Mosque of the Omayyades (where is the tomb of Saladin), and in the south western quarter is 'The Gate of God,' through which the pilgrimage to Mecca passes annually, while the "street called Straight" (Acts ix, 11) runs E to W through the city. Damascus is an important commercial centre, and among its industries are metal work and mother-of-pearl inlay. At Rasbeek (Heliopolis), on the western slopes of the Anti Lebanon range (35 miles N N W of Damascus), are ruins of 1st to 3rd century

Roman temples (the Circular Temple, the Great Temple and the Temple of Bacchus), and in the vicinity of the ruins is the largest cut stone in the world ($60 \times 17 \times 14$ feet), weighing 1,500 tons. The railway system consists of a line from Beyrout to Damascus (narrow gauge) with a connexion at Rayak for Homs, Hama and Aleppo (standard gauge). The line from Tripoli to Aleppo and Homs, was reopened in 1922. A narrow gauge railway runs from Mameltein along the coast from Damascus there is rail way communication with Palestine, and Deraa, and the Syrian railways link up with the Baghdad railway at Aleppo.

The administrative Capital of Syria is Beyrout. The Great Lebanon (the former Turkish provinces of Lebanon and Beirut) declared a State by the High Commissioner under the title of *Etat du Grand Liban* in 1920 extends along the Mediterranean littoral from the Palestine frontier to Nah el Kebir (15 miles N of Tripoli) and is bounded on E by the Great Central Depression known as the Bekaa, in which flow the rivers Orontes and Litani. Its total length is about 120 miles, and its width varies from 30 to 35 miles. The estimated area of the Great Lebanon is about 4,300 square miles with an estimated population of 579,778. The products of the soil are olives, wheat, grapes, oranges and mulberry trees, the live stock are numerous and one of the principal sources of wealth. The Capital is Beyrout (pop. 91,498), which is the chief seaport and also the administrative capital of Syria. Tripoli is the next important town and seaport. Minor ports are Jounieh, Tyre and Sidon. The national flag is the French tricolour with a Cedar of Lebanon on the white band.

Governor of the Great Lebanon, M. Anbounard (acting).

Beyrout—British Consul General, H. E. Satow, O.B.E.

Consul, J. B. F. Vaughan Russell
N. Mayers (acting) I. C. Pettit (acting).

Aleppo—Consul,

Pro Consul A. Akras

Alexandretta—Vice Consul J. A. Catoni

Damascus—Consul C. E. Palmer D.S.O.

Cilicia extends round the Gulf of Alexandretta, from Lebanon in the south to the Anti Taurus in the north, and from the Selhün Imak river in the west to Urfa in the east, the total area (which includes part only of the ancient Roman province of Cilicia or of the Turkish vilayet of Adana) being about 12,000 square miles with a population estimated at 300,000. The country is generally fertile and produces wheat, cotton, wool, sesame &c. and is capable of considerable agricultural development. The principal towns are Adana (45,000), the former capital of the Turkish vilayet of that name, Marash (50,000), and Alexandretta or Iskanderun (10,000), the chief port and an important strategical centre, with command of the Bisan Pass. Cilicia was handed over to the Kemalists by the French on Jan. 4, 1922. The district is now under the control of the Nationalist Assembly of Angora.

TAURIDA.

In March 1918 the former government of Taurida declared its independence as the *Taurida Republic*. The area is 13,328 sq. miles, with a population (1914) of 2,000,000, and the Republic is bounded on the N. by the Dnieper river

and the Province of Ekaterinoslav, on the W and S by the Black Sea and on the E by the Sea of Azov. The soil is very productive, especially in its southern peninsular, known as the *Crimea* (the ancient Tauric Chersonese). The capital is **SIMFEROPOL** (pop 1914, 85,000), other towns being Sevastopol (pop 1914, 62,000), Kerch (pop 1914, 60,000), Theodosia (pop 1914, 44,000), Berdiansk (pop 1914, 41,000), Yalta (pop 1914, 31,000), Eupatoria, Melitopol, and Perekop.

TURKESTAN

In Jan 1918 the former Russian Provinces of Ferghana, Syr Daria, Amu Daria, Samarkand and Semirychensk, with a total area of about 420,000 sq miles and a population of about 7,000,000 declared their independence as the *Republic of Turkestan*. The territories of this Republic extend from the Aral Sea in the W to the boundaries of the Chinese Republic in the E and between the River Chu and Lake Balkhash on the N and Khiva, Bokhara and Afghanistan on the S. The capital is **TASHKEND** (pop 1914, 275,000), other large centres being Khokhland (pop 1914, 125,000), Samarkand (pop 1914, 200,000), Adijan (pop 1914, 90,000) and Naumangan (pop 1914, 80,000).

Turkish Representation in London (not yet appointed) 159 Portland Place W 1
1st Secretary,

The Ottoman Turks are derived from Central Asian tribes who were converted to the Muhammadan faith in the seventh century. These Muhammadan tribes attacked and conquered the Asiatic Provinces of the Byzantine (Eastern Roman) Empire, and by the middle of the fourteenth century they had spread from Asia Minor into South East Europe. In 1453 they captured Constantinople and spread over the whole of the Balkan Peninsula, their name of Osmanli, or Ottoman Turks being derived from Othman, or Osman (1299-1326), a notable Turkish leader in the fourteenth century. Early in the sixteenth century the Ottoman Empire

was spread over Egypt and northern Africa, and penetrated northward into Hungary, a great part of which was incorporated with the Turkish dominions until 1699 when the *Peace of Carlowitz* freed the country from Turkish rule. In the nineteenth century the outlying African dominions, with the exception of Tripoli, broke away from their suzerain, or were occupied by other Powers, and in the latter part of the century the northern states of the Balkan Peninsula asserted their independence, under guarantees of the Christian Powers. The outcome of these political upheavals was a demand for better government in the remaining dominions of the Sultan. During the process of constitutional reforms which drove the Sultan Abdul Hamid (1876-1908) from the throne war broke out between Italy and Turkey, and Tripoli and Benghazi were ceded to Italy under the *Treaty of Lausanne* (Oct 12, 1912). These events were followed in the autumn of 1912 and the early months of 1913 by a disastrous war with the states of the Balkan League (Bulgaria, Montenegro, Serbia and Greece). At the outbreak of hostilities the European dominions of Turkey extended westwards to the Adriatic and northwards to Bosnia Herzegovina (Austria), thus including the districts known as Macedonia, Thrace and Albania. By the *Treaty of London* (1913) the north western boundary of European Turkey was a line drawn from Enos on the Adriatic coast to Midia on the Black Sea, thus excluding Adrianople which had capitulated (after a long siege) to the Bulgarian forces. At the outbreak of the second Balkan war (in which Serbia and Greece were aided against Bulgaria by Rumania), Turkey re-occupied Adrianople, thus recovering a part of the lost dominions. In the Great War of 1914-1918, Turkey threw in her lot with the Central Powers and made unsuccessful attacks on Egypt and South Russia. Great Britain sent an expedition to Gallipoli (which was withdrawn) and to Mesopotamia and Palestine, which freed those countries and Syria from Turkish rule while various tribal revolts in Arabia ended the Turkish suzerainty in that peninsula. On Oct 30, 1918 Turkey surrendered unconditionally before the conquests of the various Anglo-Indian and Imperial British columns and their Arabian allies. The final peace settlement with Turkey was the subject of protracted negotiations. The first definite proposals were embodied in the *Treaty of Sevres*, which was signed on Aug 10, 1920, but was never ratified. The rise of the Turkish Nationalist movement in Asia Minor, which brought into existence a *de facto* Government at Angora and the defeat of the Greek armies in August-September 1922, finally destroyed any possibility of the *Treaty of Sevres* being brought into force.

Treaty of Lausanne.—As a result of the Peace Conference, which met at Lausanne from November, 1922, until February, 1923, and again from April to July, 1923, a treaty was signed there on July 24, 1923. This treaty has been ratified by Turkey and Greece, and will come into force as between Great Britain and Turkey when it has been ratified by Great Britain, France, Italy and Japan or any three of those Powers. The main provisions of the treaty and various instruments annexed to it are that Turkey retains Eastern Thrace, including Adrianople, while ceding Syria, Palestine, Mesopotamia and the rest of Arabia. The northern

* Following the military successes of Mustapha Kemal Pasha (Commander in Chief of the armies of the Angora Government in Anatolia) against the Greeks, the Angora Government called upon the Sultan to resign. Sultan Muhammad VI took refuge on a British warship (Nov 29, 1922) and the National Assembly elected the heir presumptive to the Caliphate, without temporal power.

boundary of Mesopotamia is to be settled by negotiation within nine months, or failing that by reference to the League of Nations. Italy is confirmed in possession of the Dodecanese, and Greece in possession of the islands formerly held by Turkey in the Aegean, except Imbros and Tenedos. Turkish rights over Egypt the Sudan and Cyprus come to an end. A special convention demilitarises zones on either side of the Bosphorus and Marmora, and lays down rules for preserving the freedom of the Straits in peace and war. These rules are to be applied under the auspices of the League of Nations by a commission composed of representatives of Turkey, France, Great Britain, Italy, Japan, Bulgaria, Greece, Rumania, Russia, Serbia and, in the event of her accession, the United States. The minorities clauses are the same as in recent European treaties. Turkey cedes ground for military cemeteries at Anzac and elsewhere. The old extraterritorial privileges of foreigners ('Capitulations') are abolished, but a special convention concluded for seven years provides that foreigners residing or trading in Turkey are to be subject to no taxes or disabilities not imposed on Turks. A commercial convention concluded for five years establishes an import and export tariff and lays down that there shall be no discrimination against foreign shipping and trade.

Turkey in Europe (10,000 sq miles, estimated population 2,000,000) thus consists of Eastern Thrace (to the Maritza) including the cities of Constantinople and Adrianople, and is separated from Asia by the Bosphorus at Constantinople and by the *Dardanelles* (Hellespont)—about 40 miles in length with a width varying from 1 to 4 miles—the political neighbours being Greece and Bulgaria on the west.

Turkey in Asia (300,000 sq miles, estimated population 11,000,000) comprises the whole of Asia Minor, and extends from the Aegean Sea to the western boundaries of Georgia, Erivan and Persia, and from the Black Sea to the Mediterranean, and the northern boundaries of Syria, Arabia and Iraq. This area corresponds approximately with *Anatolia* (Land of the Rising Sun or Orient) of the Greek historians.

Government—The forces of the "Government of the Grand National Assembly" (with its seat at Angora) of which Mustafa Kemal Pasha is President, captured Smyrna from Greece on Sept. 9, 1922. The greater part of the city was destroyed by fire on the 13th of the same month. The Angora Government under the *Armistice of Mudania* of Oct. 11, 1922, resumed possession of Eastern Thrace, and gradually took over the administration of Constantinople from the Allies. Sultan Muhammad VI (Vehideddin) fled to Malta on Nov. 30 without however, abdicating, and the Heir Presumptive, Abdul Mejid Effendi, succeeded, after election by the Grand National Assembly at Angora, without any temporal functions and with the title of Caliph. He resides at Constantinople. The Caliph is in direct descent from Othman, the founder of the Empire. The religion of the State is by law Muhammadan, and the majority of the inhabitants are Muhammadans, but there are large numbers of Christians (of the Latin and Eastern rites) and Jews. Education is nominally compulsory and free. There are primary schools,

training schools for teachers, and at Constantinople a university, founded in 1900.

Production—Although the soil of Asia Minor is generally fertile, agriculture is still very primitive. Cereals are abundantly produced, cotton, tobacco, and coffee are generally cultivated, and figs, nuts, grapes, olives and many varieties of fruit are grown. Samsoun is the chief centre of the tobacco growing industry, which is also of importance at Smyrna, Ismidt and Broussa. Cattle raising is an important industry. The export of merchandise was considerable before the War, and consisted principally of coffee, opium, tobacco, cotton carpets, gums, and other products of roses. The forests are a source of wealth, and the mulberry is planted for the silk-worm industry which centres round Broussa. The mineral wealth of Asia Minor is considerable but almost undeveloped. Chrome ore, zinc, manganese, antimony, copper, borax, corundum (emery), coal and lignite, petroleum, gold (from the ancient gold mines of Troy), silver, and arsenic are among the minerals produced. The principal manufacture is carpet weaving. Before the War the total exports were valued at about £25,000,000 annually and the imports at about £145,000,000 (£111 = £120). In 1923 the share of Great Britain in the import trade of Turkey was 40 per cent. In 1920 it had fallen to 29 per cent. and in 1921 to 21 per cent.

Communications—About 300 miles of railway remain to Turkey in Europe. In Asia Minor the Anatolian Railways run from Haidar Pasha to Faki Shehir, Adion Karahissar, Konia and Eregli. Less important lines include the Faki Shehir, Angora, Mudania, Broussa, Smyrna, Cassaba, and Smyrna Aidin systems. These railways have a total length of about 1,500 miles. There are electric trams in Constantinople and Smyrna.

Turkish Finances—In 1921-22 the expenditure in the budget was placed at £127,705,204 required almost entirely for salaries and departmental expenses, the amount actually expended was £121,890,067 leaving about £16,000,000 unpaid. The ordinary revenue was derived from customs (£15,096,770), taxes in Constantinople vilayet (£13,903,035), consumption taxes (£13,278,503), and miscellaneous (£11,058,231) a total of £13,336,239. The extraordinary revenue was £19,553,122, made up principally of Régie tobacco monopoly (£2,899,084), Eastern Telegraph Company (£1,353,249), Ottoman Public Debt (£13,833,393). The total receipts for 1921-22 were thus £122,889,661 but of this total nearly £18,000,000 is exceptional and non-recurrent, so that the 1921-22 deficit will be more than doubled in 1922-23.

The General Debt of the Ottoman Empire amounted on March 1, 1925, to £170,048,107. New loans, advances, &c., issued during the War increased the total to £288,115,647 on March 1, 1921 exclusive of indemnities or reparations due to Allied subjects. These figures are subject to modifications, no accurate accounts being available under present conditions. The Ottoman Debt is administered by a Council President, Sir Adam Block, K.C.M.G. (Delegate of British and Netherlands Bondholders), Members M. F. de Cloëres (French), M. B. Nogara (Italian), Hussein Djahid Bey (Turkish), J. Procter (Imperial Ottoman Bank), Imperial Commissioner, Said Bey, General Manager, M. Georges Abonneau.

CAPITAL OF TURKEY, ANGORA, the head quarters of the Commissioners of the People an inland town of Asia Minor, about 300 miles E S E of Constantinople, with a population in 1923 of about 65,000. Angora (of Ancyra) was the capital of the Roman Province of *Galatia Prima*, and a marble temple dedicated to Augustus (now in ruins) contains the *Monumentum (Ma mm) Ancyranum*, inscribed with a record of the reign of Augustus (aesar). It is reported that a new city is to be laid out, on the lines of Washington, D.C. **CONSTANTINOPLE**, the former capital remains the seat of the Caliph of the Muhammadan World. It was the Roman city of Byzantium and was selected by Constantine the Great as the capital of the Roman Empire about A.D. 325, and renamed by him. It became capital of the Eastern Roman Empire, and 364 population estimated at 1,000,000. Other cities are Smyrna (70,000), Broussa (50,000), Soutari in Anatolia (50,000), Cæsarea (50,000), Sivas or Sebastia (45,000), and Trebizond (30,000). The population of Asia Minor has been greatly reduced by the exodus of Greeks and Armenians following upon the Turkish capture of Smyrna the preceding figures are estimates of Oct. 1923.

The smallest Republic in South America, on the east coast of the Río de la Plata, situate in lat. 30°-35° S and long. 53° 25'-57° 42' W containing an area of 72,210 square miles, and a population on Jan. 1, 1918 of 1,407,847.

Uruguay resisted all attempted invasions of the Portuguese and Spaniards until the beginning of the 17th century and 100 years later the Portuguese settlements were captured by the Spaniards. From 1726-1814 the country formed part of Spanish South America and underwent many vicissitudes during the Wars of Independence. In 1814 the armies of the Argentine Confederation captured the capital and annexed the province, and it was afterwards annexed by Portugal and became a province of Brazil. On Aug. 25, 1825, through the heroism of the 33 liberators (whose memory is perpetuated in the name of the province of *Provincia y Tres*), the country threw off the Brazilian yoke. This action led to war between Argentina and Brazil which was settled by the mediation of the United Kingdom. Uruguay being declared an independent state in 1828. In 1830 a Republic was inaugurated, with a Constitution of Sept. 10, 1830. The President is elected by the legislature for a term of 4 years and is ineligible for a consecutive period of office. By an amendment to the Constitution (which came into force March 1, 1919) an administrative council was appointed to share the Executive power with the President.

The country consists mainly (and particularly in the south and west) of undulating grassy plains. The principal chains of hills are the Cuchilla del Haedo which crosses the Brazilian boundary and extends southwards to the Cuchilla Grande of the south and east. In no case do the peaks exceed 2,000 feet. The principal river is the *Rio Negro* (with its tributary the Yi), flowing from north east to south west into the Río de la Plata. The boundary river *Uruguay* is navigable from its estuary to Salto about 200 miles north, and the Negro is also navigable for a considerable distance. Smaller rivers are the Cuareim, Yaguarón, Santa Lucía, Quequay, and the Cebollati. On the south east coast are several lagoons, and the north east boundary crosses (the Brazilian) Lake Mirim. The climate is extraordinarily healthy, with great uniformity of temperature, the summer heat being tempered by the breezes of the Atlantic and the geographical position causing a high thermometer in winter.

Wheat, barley, and maize are cultivated but the export is at present prohibited. The wealth of the country is obtained from its pasturage which supports large herds of horned cattle (7,800,450 in 1916) and sheep (21 472,900 in 1916), the wool of which is of excellent quality. Gold mines exist at Cúnapirú. The exports are entirely animal products, and include frozen and preserved meat, wool hides, horn hair tallow and jerked beef, the imports are principally machinery, textiles and clothing, food substances and beverages, coal, oil, timber, fuel and blood stock. The principal imports from the U.K. are woollen and cotton goods hardware, and coals. There are 1,499 miles of railway open (1922), all in British hands, and three short lines owned by the State and 4,850 miles of telegraph, with 19,039 miles of telephones. There were 995 post-offices, dealing with 101 638 265 letters and packets. The language spoken is Spanish.

The most northerly Confederation of South America situated approximately between 2°40' S lat. and 12°20' N lat. and 59°52'—73°15' W long. It consists of 20 States and 2 federal territories. The best authorities calculate the actual present area to be approximately 363,728 square miles. The census of 1900 gave the population as 2,411,952.

Venezuela lies on the north of the South American continent, and is bounded on the north by the Caribbean Sea, west by the Republic of Colombia (with which Republic the boundary is in dispute), east by British Guiana, and south by Brazil. Included in the area of the Republic are over 70 islands off the coast with a total area of about 14,650 square miles, the largest being Margarita, which is politically associated with Tortuga, Cubagua and Coche to form the newly constituted State of Nueva Esparta. Margarita has an area of about 400 square miles.

Venezuela was visited by Columbus in 1498, and in 1499 by Alonso de Ojeda and Amerigo Vesputi, the former naming the Gulf of Maracaibo Venezuela or 'Little Venice' (on account of the Indian pile built settlements on the coast and shores of the lake), and the name was afterwards extended to the whole of the Orinoco basin. In 1550 the territory was formed into the captaincy general of (Caracas) and the country remained under Spanish rule until the revolt under Simon Bolivar, a native of Caracas, who defeated the Spanish forces in the battles of Lastoguanes (1813) and Carabobo (1821), and thus secured the independence of the country. Bolivar was an untiring hero in the cause of independence, and through his efforts (and those of his adjutant Sucre, Venezuela, Ecuador and Colombia (Upper Peru) achieved their freedom from Spain, while Peru was enabled to establish its independence in consequence of his victories. He died in 1830, at the age of 47, and his remains were re-interred at Caracas in 1842. Venezuela formed part of the Federal Republic of Colombia from 1822-1830, since which time it has been independent. There have been many revolutions since 1846 particularly in 1849, 1868, 1889, 1891, 1900 and 1902. In 1854 President Monagas liberated the African slaves, and in 1864 President Falcon divided the country into States and formed them into a Federal Republic. The present constitution rests upon the fundamental law of June 13, 1954, under which the government is that of a Federal Republic of twenty autonomous States a Federal District, and two Territories, with a President elected by the Federal Congress for seven years.

The Eastern Andes from the south west cross the border and reach to the Caribbean Coast, where they are prolonged by the Maritime Andes of Venezuela to the Gulf of Paria on the north-east. The main range is known as the Sierra Nevada de Merida and contains the highest peaks in the country in Picacho de la Sierra (15,400 feet) and Salado (12,870 feet), the maritime ranges containing the Silla de

Caracas (8,531 feet). Near the Brazilian border the Sierras Parima and Pacaraima and on the eastern border the Sierras de Rincote and de Usumamo enclose the republic with parallel northward spurs, between which are valleys of the Orinoco tributaries. The Sierra Parima contains Yapurana (7,175 feet) and Duida (8,120 feet) and Para Carima contains Maiguacá (8,228 feet) and Roraima (8,530 feet), the latter being on the Venezuela Guiana boundary. The slopes of the mountains and foothills are covered with dense forests, but the basin of the Orinoco is mainly llanos or level stretches of open prairie, with occasional woods.

The principal river of Venezuela is the Orinoco, with innumerable affluents the main river exceeding 1,500 miles in length from its rise in the north western mountains of the republic to its outflow in the deltaic region of the north east. The Orinoco is navigable for large steamers from its mouth for some 700 miles and by smaller vessels as far as the Malpures Cataract some 200 miles further up stream. Among the many tributaries of the main stream are the Ventuari, Carana and Caroni from the south, and the Apure (with its tributary the Portuguesa) Arauca, Meta and Guaviare from the west, the Meta and Guaviare being, principally Colombian rivers. The upper waters of the Orinoco are united with those of the Rio Negro (a Brazilian tributary of the Amazon) by a natural river or canal known as the Casiquiare. The coastal regions of Venezuela are much indented and contain many lagoons and lakes of which Maracaibo with an area exceeding 7,000 square miles is the largest lake in South America. Other lakes are Zulia (200 square miles), south west of Maracaibo and Valencia (216 square miles) about 1,400 feet above sea level in the Maritime Andes. The llanos also contain lakes and swamps caused by the river floods, but they are dry in the summer seasons.

The climate is tropical and except where modified by altitude or tempered by sea breezes is unhealthy particularly in the coastal regions and in the neighbourhood of lowland streams and lagoons. The hot wet season lasts from April to October, the dry cooler season from November to March.

The principal imports are cotton prints and shirtings and cotton drill mainly from the U.K., and hardware, principally from the U.S. The principal articles of export are coffee (87,552 metric tons in 1919) cacao (19,833 metric tons in 1919), goatskins, asphalt, sugar hides, and balata. The U.S. is the principal customer.

Spanish is the language of the country.

The Kingdoms of the Serbs, Croats, and Slovenes is an outcome of the War of 1914-1918 through the fusion of the Kingdoms of Serbia and Montenegro with the Yugo Slav districts of Austria-Hungary. The area and population of the new kingdom are approximately as under—

District	Sq. Miles	Est. Pop.
Serbia	34,300	5,000,000
Montenegro	5,800	500,000
Croatia and Slavonia	16,418	2,700,000
Banat (part)	6,000	800,000
Bosnia	16,233	1,630,000
Herzegovina	3,527	270,000
Carniola (part)	2,500	250,000
Styria (part)	1,900	350,000
Total	86,878	11,600,000

The political neighbours are the Republics of Austria and Hungary on the north, Albania and Greece on the south, Bulgaria and N.W. Greece on the east, and, on the west, the "buffer

state of Fiume and the Adriatic Sea. This "buffer state" has been constituted by agreement with Italy and has a special status.

In 1913 Serbia, as a member of the *Balkan League* (Bulgaria, Greece, Serbia, and Montenegro) waged a successful war against Turkey, and enlarged her boundaries, but in August 1913 Serbia and Greece were attacked by Bulgaria, their former ally owing to disputes concerning the division of the spoils. The second war collapsed in a few weeks through the threatened intervention of Rumania and ended in the *Treaty of Bucharest* (Aug. 7, 1913) by which the whole of "Old Serbia" (the greater parts of the Turkish vilayets of Macedonia) were included within the Serbian boundaries. The assassination of the Austrian heir presumptive (June 28, 1914) brought about an invasion of Serbia by the forces of Austria-Hungary and resulted in the War of 1914-1918 during which the whole country was overrun by the forces of Austria, Germany and Bulgaria. On Aug. 28, 1918, the Serbian Parliament met at Corfu but in Oct., 1918, the Serbian armies were again in occupation of Nish and on Nov. 3, 1918, the capital was re-occupied. Montenegro (*Terna Gora*) was formerly a province of the old Serbian Empire. It has an area of 5,600 square miles (including the territory acquired from Turkey in 1913) and a population estimated at 500,000. On Nov. 29, 1918, the National Skupstina deposed King Nicholas (who had reigned since Aug. 28, 1860) and a decision was made to reunite Montenegro with Serbia. King Nicholas died on March 21, 1921, and the union of the country with Yugo-Slavia is now an accomplished fact. The chief town is Cetinje (pop. 5,000) and the ports are Antivari and Dubligno. On Oct. 20, 1918, the National Assembly of the former Hungarian provinces of Croatia and Slavonia proclaimed the complete independence of those provinces and a National Council was established to which representatives of other Slav States (Bosnia, Herzegovina, and parts of Austria and Hungary) were admitted. On Dec. 29, 1918, a Ministry was formed for the Serb, Croat and Slovene Kingdom, in which representatives of Croatia and Slavonia were included.

Old Serbia has no seaboard but the whole coast of Croatia, Dalmatia and Montenegro is included in the Yugo-Slav Kingdom and access is thus possible to the Adriatic at any point of the littoral of these territories. By a convention with Greece of May, 1914, similar access is obtained to the port of Salonika on the Aegean; this convention was renewed in another form in 1923, a free zone in Salonika harbour being thus secured to the S-C-S Kingdom. In 1922 there were about 6,000 miles of railway in operation. The Danube forms a great commercial highway, the Save and Tisa being also extensively used by river steamers. In January 1923, a French company secured a contract for an aerial passenger and mail service between Paris and Belgrade.

The Army on a peace footing consists of

130,000 officers and men, the war strength being about 250,000.

The religion of the state is Greek Orthodox and Roman Catholic. Primary education is free and nominally compulsory, but the attendance does not exceed 25 per cent of the young. The State also maintains Secondary and Girls' High Schools. The University is at Belgrade.

The principal industry is agriculture and the crops of 1922 were of average quality enabling a considerable surplus of wheat, barley, oats, rye and maize (over 660,000 tons of last named) to be exported. The product of the vines also permitted a surplus to be exported. Of the exports of all kinds in 1922, Italy took 28 per cent and Austria 23 per cent.

	Regular (Dinars)	Extraordinary (Dinars)

IMPERIAL PREFERENCE

PREFERENCE was instituted by Section 8 of the Finance Act 1929 and has been in force since June 1, 1929, for tea, and September 1, 1929, for the other articles to which it applies. The Preference took the form of an additional duty of 6d to 4s per gallon on Non Empire spirits, and a reduction of duty on other articles produced in and consigned from the Empire, viz., of one-sixth in the Customs duties on tea, cocoa, coffee, chicory, sugar and cognate goods, dried fruits, tobacco and motor spirit of one-third in the Customs duties on cinematograph films, clocks and watches, motor cars and cycles and musical instruments, and of varying amounts (see Customs Tariff pp. 382-3) in the Customs duties on wine. The Excise duties on chicory, sugar &c., and tobacco were correspondingly lowered (see pp. 384, 385).

Particulars of the clearances at the full and the preferential rates of duty respectively of the articles upon which Preference is granted are given at the foot of this page.

In addition to the Preference now accorded to Imports from British Dominions certain other products are suggested for inclusion in consequence of the recommendations of the Imperial Conferences held in London in the autumn of 1923—these additions are detailed on page 481.

AID FOR AGRICULTURE

DURING the past year the Agricultural Credits Act and the Agricultural Rates Act have been passed with the object of affording relief to the agricultural industry from the difficulties which it has been experiencing. The Agricultural Credits Act aims at assisting those farmers who purchased their farms after the introduction of the Corn Production Act in 1917 and before its repeal in 1921. A considerable proportion of the price of these farms was paid for with borrowed money and as a rule the loans were not for very long terms. As a consequence there was much uncertainty as to what would happen when the money was called in. The Act enables these owners to obtain mortgages, repayable within a period of 60 years by yearly or half yearly instalments on the instalment or the annuity system. The amount secured by the mortgage must not exceed 75 per cent. of the present value of the farms or an amount equal to 30 times the annual value of the land as ascertained for the purposes of Schedule A of the Income Tax Acts. The latter limitation excludes from the scope of the Act the building value of any agricultural land adjacent to a town. The mortgages will be granted through approved associations which are restricted in their profits and the necessary funds for this

purpose will be advanced to the associations by the Public Works Loan Commissioners. The urgent need for the provision of additional short term credit facilities is met in the Act, which provides for the organisation of co-operative credit societies, having for one of their objects the making of advances to members repayable within a period not exceeding 5 years for such agricultural purposes as may be approved by the Minister of Agriculture. It is proposed that these societies should be formed with £1 shares of which 5s should be paid up, and for each £1 share so paid up the Government would advance another £1. Another clause of the Act amends the Land Improvement Act of 1864 by removing the limit of 5 per cent interest chargeable on loans to landowners and giving the Minister of Agriculture a discretion as to the rate to be charged.

The Agricultural Rates Act provides that the occupier of agricultural land in England and Wales, who since 1866 has been paying half rates, shall pay one-quarter until March 31, 1925 when the Act expires unless Parliament otherwise determines. The deficiency thus caused in the produce of local rates will be made good by Government grants from the Local Taxation Account. This deficiency in England and Wales in the financial year 1923-4 was estimated by the Minister of Health at about £2,750,000. The relief given to Scottish farmers differs from that given to English and Welsh farmers, owing to differences in the system of rating.

BETTING TAX

FOLLOWING the introduction of the 1923-4 Budget the Government appointed a Select Committee of 19 members to consider the question of imposing a duty on betting and to report whether such a duty is desirable and practicable. Evidence as to the present position of the law with regard to betting which is undoubtedly in a rather chaotic condition was given to the Committee by a representative of the Home Office. The general policy of the law seems to have been to prohibit facilities for betting where it was likely to do most harm and to discourage it by the indirect means of rendering betting contracts unenforceable and providing facilities for the recovery of money deposited for bets in certain cases. The extent and kinds of betting most frequent and details of the administration of the law formed the heads of evidence given by the chiefs of the Police Force. A scheme framed by the Board of Customs and Excise for levying a duty on betting was submitted to the Committee by Sir Horace Hamilton. This scheme was based on the method adopted for the entertainment tax and proposed an *ad valorem* duty. In the case of credit betting stamps could be used, but the majority of credit bookmakers could be taxed on their returns, which would be submitted to the Board and checked. For cash betting the scheme proposed that bets should be made on stamped tickets. The witness thought that if a duty on betting were imposed strict betting must be abolished, and all betting carried out on licensed premises and the practice rendered non-criminal. Two licences were proposed, one for each professional bookmaker and one for each betting office. The personal licence would be similar to that held by an auctioneer. A scheme was submitted, at the Committee's

request, by Sir John Pedder, of the Home Office giving the outline of a scheme for the licensing of betting offices. This scheme proposed that any person who wished to set up a betting office would have to apply to a Court of Summary Jurisdiction for the registration of the premises. Renewal of registration would be necessary each year, and it was suggested that there should be power to disqualify betting offices and bookmakers. Evidence was also given by several prominent churchmen, representatives of the turf bookmakers &c and a demonstration was given to the Committee of the workings of a totalisator. A number of machines were exhibited, and the operation of a totalisator on a race course in Australia was shown by means of a cinematograph. At the time of going to press the Committee's report had not been published.

BRITAIN'S DEBT TO AMERICA

BEFORE Mr Lloyd George's Coalition Government fell it had been decided that Sir Robert Hoare, the Chancellor of the Exchequer should during the recess proceed to Washington to discuss with the United States Government the question of the terms for the repayment of Great Britain's war debt of £856,000,000 to the Republic. In his place, Mr Stanley Baldwin accompanied by the Governor of the Bank of England undertook the mission and after several interviews with the Funding Commission appointed by Congress returned to England with their proposals on the subject. These were placed before Mr Bonar Law's Cabinet, and despite differences of opinion as to the wisdom of accepting the terms without a further attempt at modification were accepted, largely owing to the strong advocacy of Mr Baldwin. Subsequently Congress approved the scheme and the first payment by Great Britain was made during the course of the year.

The terms provided for the payment of 3 per cent interest on the loan for the first 10 years, and for the following 52 years of 3½ per cent, plus ¼ per cent for sinking fund throughout the period. This meant a payment of about £30,000,000 a year which not only paid interest but went to the reduction of the principal, the debt being extinguished in the 62 years. The original proposal of the British Government was to pay interest at 2½ per cent with an additional ½ per cent for sinking fund, or a total of about £21,000,000 a year. The alternative to the acceptance of the American conditions was the payment for interest alone of £50,000,000 a year and it was recognised in financial circles that such a burden would be intolerable. "The strain of paying the five per cent on the whole of the debt," declared Mr Baldwin on his return from Washington, "would be greater than this country could carry."

BRITISH AND AMERICAN TRADE

THE figures in the following tables are taken from the monthly review of the Midland Bank (London). The purpose of the figures was to emphasise the extraordinary economic conditions and to show that Britain and America, sharing between them one half of the World's trade, are the only countries where the exchange is relatively stable in the midst of a world wide debasement. In publishing the statistics the

compiler stated that 30 countries have been included in the term "World," the exports and imports of those countries representing 90 per cent of the trade of the whole world. The relative percentages of the trade of the remaining 10 per cent would probably affect those stated below in only a very slight degree. It will be seen that the value of the "World's" imports is greater than that of its exports. This is accounted for by the fact that Exports are taken at F O B values and imports at C I F values, an explanation of which is given on p. 507.

measures to deal with unemployment, and adherence to the principles of the League of Nations. An important alteration was carried in the rules of the B. L. The aim and object in Rule 3 (4) were altered to 'To press that those who assisted to save the country in its hour of need be granted the right to work, or be granted maintenance, instead of appealing to the Poor Law Authorities. The old sentence ran 'To press the claims of ex Service men for employment and to enlist the co-operation of employers and Trade Unions for this purpose.'

IMPORT TRADE.

Figures for 1903 to 1922 converted into Sterling at *Parity of Exchange* for 1920, 1921 and 1922 at *Average Rates of Exchange*.

Year	World Imports	United Kingdom.		United States

THE BRITISH LEGION

A CONFERENCE of Delegates from the various branches of the British Legion was held at Queen's Hall, London, on May 20-22, 1922. Mr. T. F. Lister being in the Chair. Amongst the resolutions carried were: compulsory employment of disabled ex Service men in place of the King's Roll, establishment of Agricultural Wages Boards, elimination from press reports of the title "ex-soldier" then appearing in Police Court cases, dissatisfaction with Government's

Lt. Col. G. Crossfield, D.S.O., T.D., was elected Vice-Chairman. The 1922 Conference will be held in London again. The Prince of Wales is Patron and Earl Haig President. Col. E. C. Heath is General Secretary. The Office are at 26, Eccleston Square, S.W. 1.

BROADCASTING

GREAT developments have taken place during the past year in connection with broadcasting. The number of broadcasting stations has been

increased to eight, situated in London Bourne mouth, Cardiff, Birmingham, Manchester, New castle, Glasgow and Aberdeen and experiments have been made by the British Broadcasting Company in the direction of establishing relay stations intended to receive and retransmit the programmes of the main stations. The entertainments provided by the Company have improved in quality during the year, notable performances being the broadcasting of operas from the National Opera House Covent Garden. Difficulties, however, were experienced owing, to the opposition of other entertainment bodies notably those representing theatrical interests, concert givers and concert agents. The Entertainment Industry Joint Broadcasting Committee representing all branches of the industry, decided to stop the broadcasting from theatres of plays and similar entertainments and to prohibit concert artists from performing at the broadcasting studios. The National Opera Company however continued to allow their operatic performances to be broadcast. Much confusion arose with regard to the question of licences no provision having been made for the issue of licences to persons who made their own sets or assembled them from ready made parts. In April last the Broadcasting Company estimated the number of persons with wireless sets not possessing a licence at 200,000. Negotiations between the Postmaster General and the Company having failed to settle the question of licences for these home constructors of sets a Government Committee was appointed to consider (a) Broadcasting in all its aspects (b) contracts and licences which have been or may be granted (c) the action which should be taken upon the determination of the existing licence of the Broadcasting Company (d) the uses to which broadcasting may be put, (e) the restrictions which should be placed upon its use and development. Following the report of the Committee an agreement was arrived at between the Postmaster General and the Broadcasting Company which provides *inter alia* for the issue of constructors licences for a limited period at an annual fee of 15s as compared with 10s charged for B.B.C. licences, provided that no parts manufactured elsewhere than in Great Britain and Northern Ireland are knowingly used in the receiving apparatus. The fees for the B.B.C. licences and the experimental licences are to remain at 10s per annum. The Company will receive 12s 6d out of the 15s licence fee and 7s 6d out of the 10s fee. These arrangements are to continue till the end of 1924 when it will be possible for the single form of licence recommended by the Committee to be introduced if it should then be thought desirable. The licence held by the Company will be extended under suitable conditions to the end of 1925, and any profits earned beyond 7½ per cent on its capital are to be surrendered to the Post Office.

CHEAPER GOVERNMENT

The Estimates for the Civil Services and Revenue Departments for the year ending March 31, 1924, show a reduction of £88,184,994 on those of the previous year, the respective totals being

1923-24 £314,134,754
1922-23 £402,319,748

Of the total estimate, £298,134,754 is allocated to ordinary services and £16,000,000 to transitory

services arising out of the War. Civil Services, including unclassified services cost, £251,690,043 and the Revenue Departments £64,464,711.

The new Civil Service Estimates compare as follows with those for 1922-23 —

DECREASES

	Estimate 1923-24.	Decrease on 1922-23

Ireland, since the establishment of the Free State, is costing the British taxpayer less. The upkeep of the Lord Lieutenant's household,

which last year cost £5,446, no longer concerns the Irish Department, whose estimate this year, at £90,945, shows a decrease of £1,283,363. A saving of £27,398 is also effected in services for Northern Ireland, the cost of the Irish Land Commission falls by £280,835 to a total of £1,221,515 and Royal Irish Constabulary Pen sions drop from £3,000,122 to £222,424, a reduction of £1,077,688. Grants in aid for Northern Ireland are estimated at £2,450,000 a decrease of £2,050,000. On the other hand compensation for Criminal Injuries in Ireland has risen by £1,055,020 to £3,075,020, and the Ex Service Men (Ireland) Grant by nearly £150,000 to £1,203,772. In these items, how ever, are included various other grants, which last year were shown separately.

Estimates for the India Office (£120,000) and the Secret Service (£200,000) remain unchanged. Charges which have disappeared include those for Cabinet offices the Privy Seal office (£6,525 last year) War Memorials (£2,500) Treasury chest fund (£6,828) repayments to the Civil Contingencies Fund (£48,742) and Emergency Services (£9,000).

INCREASE IN PERSONNEL

The number of persons employed in the Navy, Army and Air Force and in Government depart ments (other than industrial staff) *Before the War* at the *Armistice*, and on *April 1, 1923* —

	1914 (Pre War)	Nov 11 1918	April 1 1923
Navy	174,000	436,000	99,500
Army	145,600	319,000	256,000
Air Force	—	293,000	28,000
Admiralty	4,400	20,457	8,203
War Office	2,800	18,324	4,685

Other departments	21,900	39,342	22,369
Total	599,000	5,143,025	588,498

COAL EXPORTS

The highest total of coal exports from Great Britain was reached in 1913, when 73,400,000 tons were sold to other countries, together with 1,235,000 tons of coke, and a 553,000 tons of patent fuel. Bunker shipments for overseas voyages amounted to 21,024,000 tons. The respective figures for 1922 were exports, 64,298,000 coke, 2,514,000 manufactured fuel, 1,227,000, bunkers 18,259,000. In weight, coal was three quarters of the total pre war quantity of exports from Great Britain, but its value (£54,000,000) was not much more than one tenth of the total received for our produce and manufactures. As cargo, coal is, however, a great help to British trade. Without it vessels bringing wheat, meat, cotton, oil and timber from abroad would have to go out in ballast. Freight is on the round voyage and the carriage of coal helps to reduce homeward transport charges. Employment to British shipping was not before the war so marked a feature of the export trade in coal as might have been expected. Nearly 66,000,000 tons

of coal and patent fuel went to European and Mediterranean destinations more than 60 per cent being carried in foreign vessels. On the other hand, 19,6 million tons sent long distances overseas were practically all shipped in British ships. The bulk of this coal went to the Argentine, Brazil and Chile. South American imports altogether amounted to 7,6 million tons. To West and South Africa and the Islands 1,9 million tons were sent. Less than 1,000,000 tons went to countries east of Suez, and North and Central America took about 100,000 tons each.

OIL FUEL AND COAL EXPORTS

The growing use of oil fuel for ship propulsion is illustrated by the following figures taken from Lloyd's Annual Report for 1922-1923 —

On Lloyd's Register	Gross Tonnage
1914, July	1,310,209
1919, "	5,336,678
1920, "	9,359,334
1921, "	12,796,635
1922, "	14,464,162
1923, "	15,798,418

Steamers burning oil fuel in 1922-23 would have required 24,000,000 tons of coal if coal fired.

THE CO-OPERATIVE MOVEMENT

At the end of Sept., 1923, it was officially stated that the membership of British Co-operative Societies was 4,566,089, a decrease of 29,628 in twelve months. The amount of share capital had decreased by £1,473,551 to £81,629,702, whilst the total deposits of loan capital, was £38,778,048. The Fifty fifth Annual Conference of the delegates from the Co-operative Societies was held at Edinburgh on May 21-23, 1923 when 1,560 attended representing 570 societies. The Co-operative Union actually consists of 1,300 societies. An endeavour is still being made to make the Co-operative Movement a part of the Labour Movement, and a considerable number of members are common to each. Resolutions dealt with Trade Boards Acts which the Congress wanted extended instead of limited. The Right to Work principle was accepted as a remedy for unemployment. Objection was made to the occupation of the Ruhr, and the Govern ment was urged to open up trade extensively with Russia. A scheme for the establishment of a Co-operative national daily newspaper was remitted back to the individual societies for further consideration. The Movement has four M.P.s elected as Co-operators in the House of Commons.

CO PARTNERSHIP

ON Dec. 11, 1922 the Ministry of Labour under stood there were 236 schemes (225 certainly in operation) of Profit Sharing or Co-partnership. The net gain on the year was two, being six new, less four abandoned. From the returns received from 173 schemes, it seems that 216,441 persons were concerned in them, and that the average cash bonus worked out at £6 16s 9d per head. As far as is known there have been 467 schemes begun of which 236 are still more or less in active currency. With the hope of extending the number of firms with co-partnership schemes, several conferences have been held. The Labour Co-partnership Association met in June in London, and in July at Oxford, whilst the Industrial League and Council met at Oxford in

July Trade Unions are generally against Co-partnership. The delegates of the Trades Union Congress instructed the General Labour Council in Sept. 1923, to investigate and report upon the subject.

THE COST OF LIVING

APPARENTLY the cost of living as compared with the pre-war standard is becoming settled at about 70 per cent. higher. Whether the official figures are reliable is a matter of question; there is a feeling that the methods adopted in arriving at details are not so broad as they should be. The British methods lack the wonderful system of the U.S.A. Dept. of Labour in dealing with retail prices and family living costs. So many industries have adopted the official figure as the basis for determining the wages figure that a change of 5 points in the monthly announcement means a corresponding rise or fall in pay. The railwaymen for example, have an increase of 12 weekly when the figures rise 5 points, with a corresponding reduction for a fall. The Civil Service likewise suffers an amendment of the bonus half yearly. The official figures of the cost of living and the number of work-people whose wages were affected monthly are as follows—

Month.	Index Figure.	Work people.	Weekly rise or fall
Whole 1921	165 to 92	7,775,000	-6,041,000
1922	92 to 80	7,578,000	-4,206,000
January 1923	78	1,141,000	-13,600
February	77	1,149,750	-63,580
March	76	1,766,000	-143,510
April	74	2,095,100	-228,100
May	70	3,116,100	-235,600
June	69	3,489,700	-273,850
July	69	1,839,750	+65,295
August	71	431,850	+9,005
September	73		+10,000
October	75	1,160,000	

In most months there have been increases as well as decreases, the net figures are given above.

DISARMAMENT PROPOSALS.

THE question of disarmament has continued to occupy a prominent place among matters of public interest during the past year. Much important practical work has been accomplished by the Mixed Armaments Commission of the League of Nations in the direction of drafting a treaty of mutual guarantees and disarmament, and at home much prominence was given to the subject of disarmament as the result of a debate in the House of Commons towards the end of July, on a motion of the Labour Party. The terms of this motion were as follows—“That this House deplores the enormous and growing expenditure on the naval and air forces, and on other military preparations, which is beginning once more a competition in armaments, and is depleting resources that should be available for expenditure on education, public health, and similar social and human services, and recalling the pledges of political leaders and the expectations of the nation that the great war was to end war, urges the Government to take immediate steps to call an international conference to consider a programme of national safety based

on the policy that by disarmament alone can the peace and liberty of small and large nations alike be secured. An amendment was moved to substitute the following terms for those of the resolution—“That this House views with alarm the danger of renewed competition in armaments among nations, and is of opinion that at the earliest favourable opportunity His Majesty's Government should use its influence to the utmost extent, both through the League of Nations and otherwise, to prevent a recurrence of such international competition and bring about a general limitation of armaments.” The difference between the motion and the amendment, as the Prime Minister pointed out, was really in essence a difference of time, and the Government were of opinion that an international conference would not lead to success until a settlement of European conditions had been effected. The motion was defeated by 286 votes to 169.

The work of the Armaments Commission of the League of Nations resulted in the approval of a Draft Treaty for submission to the Assembly of the League embodying the principle of mutual guarantees of assistance as a basis for reduction of armaments. The treaty provides *inter alia* for a mutual guarantee of assistance in case of aggression for nations of the same continent, if the State claiming assistance shall have reduced its armaments on an agreed scale. The Council of the League in the event of alleged aggression is to decide which State is the aggressor, and then the form which the assistance shall take. Provision is made in the Treaty for supplementary defensive agreements between two or more States which have reduced their armaments but these must be submitted to the Council of the League for approval. After approval by the Assembly of the League the Treaty will require ratification by the Government of each State.

THE DISTRIBUTION OF HONOURS

IN regard to the most important section of the Honours conferred both at the New Year and on the King's birthday, a new method of recommendation came into operation last year as the result of the report of a Royal Commission appointed “to advise on the procedure to be adopted in future to assist the Prime Minister in making recommendations to the Crown of names of persons deserving special honour. With one exception, the members urged that a small Committee of the Privy Council should consider the names of all persons upon whom it was proposed to confer honours on account of political services before those names were submitted to the Sovereign. Appended to each name was to be a statement of the service for which the recommendation was made, a statement by the Patronage Secretary or Party Manager that no payment or expectation of payment, to any Party or political fund was directly or indirectly associated with the recommendation, and the name and address of the person who originally suggested the name of the proposed recipient. Should the Committee report against any name and the Prime Minister be determined still to recommend that name, the Royal Commission proposed that the King should be informed of the Committee's report. The Government immediately adopted these suggestions, and in both Honours Lists the announcement of the Prime Minister's recommendations was delayed until they had

been considered by a Committee of the Privy Council. This body at present consists of Viscount Ulswater (the Chairman), Lord Mildmay and Mr Evelyn Cecil, M.P.

The appointment of the Royal Commission was a sequel to discussions which had taken place in the House of Lords, and evidence was tendered by Lord Balfour, Mr Asquith, Mr Lloyd George and Mr Bonar Law (Lord Rosebery being unable to attend owing to his health) by those responsible for the Party organisations and by the Duke of Northumberland and the Earl of Selborne, who had been prominent in raising the question. Each of the Prime Ministers examined, as well as the Patronage Secretaries and Party Managers stated that he had never been cognisant of any bargain or promise that an honour would be contingent on a contribution to Party Funds. The Commissioners declared that there had been for some time persons whom they stigmatised as touts who claimed to be able to cure honours in return for specified payments. Consequently they recommended the imposition of penalties both on touts and those promising payments for honours and this proposal also the Government accepted legislation with this object being introduced in the House of Lords.

HOUSING

PROVISION OF ACCOMMODATION

THE shortage of housing accommodation is still very great, and in spite of the large number of small houses provided in the last two years chiefly by municipal authorities the problem of housing the people appears to be very little nearer a solution than when building started after the war. With the object of encouraging the building of small houses the Housing Act 1923, has been passed which provides for the payment of Government grants and assistance by local authorities by way of loans guarantees etc. The Government grants are to be paid to local authorities where the latter provide houses themselves or assist private enterprise, and amount to £6 per house per year for 20 years except where the total assistance in respect of a house built by private enterprise is less than the equivalent of £6 for 20 years, in which case the Government contribution is to be the equivalent of the assistance given by the local authority. The assistance given by the local authority may amount to more than £6 for 20 years but the excess above this sum must be met locally. As regards the houses provided by private enterprise the Minister of Health is required, before approving a grant to satisfy himself that the need cannot be met without assistance. This assistance may take one of three forms, viz., (a) A lump sum grant per house, (b) An annual payment for not more than 20 years to the person by whom the rates are payable, (c) Repayment to a building society of advances made for building or the purchase of a house.

The houses for which assistance will generally be available must have a "superficial area" within the following limits. Two-storey cottage—minimum, 600 square feet, maximum, 950 square feet. One-storey cottage, or bungalow, or flat—minimum 550 square feet, maximum 880 square feet. But where the Minister of Health is satisfied that having regard to special circumstances existing in any area smaller

houses are necessary, the minimum sizes which will be permitted to rank for subsidy are 570 square feet and 500 square feet respectively. The superficial area is the area within the containing walls of the house, including chimney breasts, and in the case of two-storey houses is the combined area as so measured of the two storeys. The area of outbuildings which provide accommodation necessary to the occupation of the house is also included. Every house or flat must be provided with a fixed bath except where otherwise approved by the Minister of Health on the recommendation of the local authority. The Act also gives new powers to local authorities to advance loans to builders and others for the construction of houses and extends the limits for loans under the Small Dwellings Acquisition Acts.

DECONTROL

THE operation of the Rent Control Act of 1920 is to be continued until June 24, 1925, subject to the provisions of the Rent Restrictions Act passed during the past year. In certain cases, however, houses are excluded from the application of the Act of 1920 (called the principal Act) viz. houses which come into possession of the landlord except where possession is secured under a judgment given on the ground of non-payment of rent and houses which are leased after the passing of the Act for a term of not less than two years expiring after June 24, 1926. The provisions of the principal Act with regard to the recovery of possession are considerably modified, and the landlord may now recover possession where he reasonably requires the house for occupation as a residence for himself, or for a son or daughter over 18 years of age, or for any person *bona fide* residing with him or for some person engaged in his whole time employment or in the whole time employment of some tenant from him or with whom conditional on housing accommodation being provided, a contract for such employment has been entered into. The Court however must be satisfied that alternative accommodation is available except in cases where the landlord requires possession for himself or for children over 18 years of age but where the landlord did not become the landlord before June 30, 1922 the Court before making an order for possession must be satisfied that greater hardship would be caused by allowing the tenant to stay than by giving the landlord possession.

Provision is made in the Act for a suspension of an increase in rent in cases where a tenant obtains a certificate from the sanitary authority that the house is not in a reasonable state of repair and a copy of such certificate is served upon the landlord. In cases of sub-tenancies a further increase of 10 per cent of the rent of the sub-let part is permitted. Tenants are protected in cases where exorbitant charges are made for furniture or other articles taken over as a condition of the grant of a tenancy, and houses let with furniture or attendance are not to be excluded from the provisions of the Act unless the rent fairly attributable to the furniture or attendance forms a substantial portion of the whole rent. Part II of the Act deals with restrictions on the right of possession in certain cases after the expiry of control in 1925 until June 24, 1930. If proceedings are taken against a tenant the Court may refuse to make

an order for possession if it thinks the proceedings for ejectment are harsh or oppressive, or that exceptional hardship would be caused to the sitting tenant. Reference Committees may be established by the Minister of Health to assist the Courts in connection with questions of rent, character or condition of dwelling houses.

THE INTERNATIONAL LABOUR ORGANISATION

By the Preamble to the Treaty of Peace the International Labour Organisation was set up as part of the League of Nations to improve conditions of labour 'involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled. Although still in its infancy the Organisation has already produced good results and in many countries all over the world workers now enjoy better conditions as a result of its efforts. The estimated cost for 1923 was rather less than £280,000 of which Great Britain bears a share.

The machinery created to carry out the objects of the Organisation consists of a Conference which meets every year, composed of four delegates from each of the 27 States belonging to the Organisation, two of these delegates in each case representing the Government, and one each the employers and the workers. The fifth of these Conferences was held at Geneva in October last. The decisions of the Conference which to be effective must be reached by a two-thirds majority take the form of a Draft Convention—a precise treaty on labour conditions for signature by each State—or of a Recommendation, laying down the broad lines which the legislation in each State should follow on a particular question connected with labour conditions. Within 18 months of the closing date of the Conference, these Draft Conventions and Recommendations must be laid by the Governments before the Parliaments in their countries.

The latest figures show that 86 ratifications of Draft Conventions have been formally registered with the Secretary-General of the League of Nations while 23 have been authorised but not yet formally communicated. In 121 cases ratification has been recommended by Governments to Parliaments but approval has not yet been signified while 89 measures have been finally adopted by legislative authorities to give effect partially or wholly to the provisions of the Draft Conventions and Recommendations, and 74 others have been proposed and are before different Parliaments.

INTERNATIONAL MIDDLE CLASS CONGRESS

DR TECHUMI, of the Swiss National Council gave the inaugural address at the establishment of the International Middle-Class Union at Berne, on Sept. 21, 1923. The Congress was formally established and registered under the Swiss Law. Article 2 of the Constitution reads, "The I.M.C.U. is based upon production, private economy, and independent labour, opposing energetically any tendency menacing its existence and its natural development. The I.M.C.U. aims at grouping artisans, industrialists, tradesmen, intellectual workers, &c., of all countries for the defence of their economic and other interests." A Committee was appointed to draw up an agenda for the Congress that will be held in Berne during 1924.

INTER-PARLIAMENTARY UNION

THE Twenty first Conference of the Inter Parliamentary Union opened at Ustari, Copenhagen, on Aug. 15, 1923. Dr Moltesen, Member of the Danish Folketing and head of the Danish Delegation, was elected President and welcomed 800 delegates and others. Representatives attended from all countries. The British Delegation of sixteen including Lord Trevelyan (President of Mission), Lord Rathcreedan, Sir Park Goff, Mr Kenworthy, Sir F. Pryce-Jones, Sir Beddow Rees, and General Spears. A Swedish resolution to ask America to enter the League of Nations was defeated but one suggesting the co-operation of an impartial international authority dealing with the economical and fiscal reconstruction of European States was carried. The permanent Committee of the Inter Parliamentary Union was instructed to enquire into for report to next Conference, the question of Parliamentary control over foreign policy and also to study and report upon colonial mandates and policies. M. Neergaard, Danish Prime Minister stated that the Union was to work for a future in which international conflicts were to be settled by arbitration and not by arms.

LABOUR

AMERICAN FEDERATION OF LABOUR.

THE American Federation of Labour held its 43rd Annual Convention at Portland, Oregon U.S.A. on Oct. 1-9, 1923, and reported a big drop in membership of trade unions. The comparative figures are—

1897	264,825
1911	1,761,835
1919	3,260,068
1920	4,078,740
1923	2,926,468

The drop in membership coincides with that of the British Trade Union Congress since 1921. The Annual Convention was against active participation of the State in industry, continuation of child employment in mines and factories, Klux Klan and Fascist Movements. The American Federation of Labour is not a socialist body. Mr Samuel Gompers (born in London, 1850) has been re-elected President for many years.

INDEPENDENT LABOUR PARTY

The Independent Labour Party's Annual Conference was held at Queen's Hall, London, on April 1-4, 1923. Mr R. C. Wallhead being in the Chair. The Independent Labour Party is quite apart from any Trade Unions, and must be regarded as one of the Socialist Parties in the country. Total Prohibition was rejected by 263 to 152. The previous question was carried by 93 to 50 on a resolution to forbid Labour M.P.s to attend functions organised by political opponents, approval of the attempt by Vienna to re-construct a Second International by 265 to 52, agreement to salary of £1,000 per annum to the Editor of *The New Leader* (established Sept., 1922), withdrawal of occupation of the Ruhr by all the Allies, or at least by the British, and various other proposals for the establishment of a Socialist Commonwealth. Various statements have been issued by the Independent Labour Party on National and International subjects. Two summer schools of study were held at Scalby, Scarborough, and Hoddesdon, Herts. In Sept., 1923, Mr George Young presented the

Independent Labour Party with Formosa Place, Cookham, to be used as a week end retreat for leaders.

INTELLECTUAL WORKERS

A difficulty is being found in dealing with the foremen and directing officers in industry, so far as Labour politics are concerned. One section would keep them out, the other would enrol them as workers. On April 7 1923 an International Congress of Intellectual Workers opened at the Sorbonne, Paris. Eight different countries, including England were represented by delegates from societies of intellectual workers, whilst eleven other countries were officially noted as having observers. The resolution was carried to found an International Confederation of Intellectual Workers, and a Committee was appointed to draft rules and deal with the creation and affiliation of national societies. M. Romain Coolus of Paris presided over the Congress.

LABOUR PARTY

The 23rd Annual Conference took place at Queen's Hall London, W. on June 26-29 1923. About 600 delegates, representing an affiliated membership of 3,310,236 (a decrease from 4,010,265 of 1922) met under the presidency of Mr. S. Webb, M.P. A motion was adopted that to be eligible as a delegate one must not be a member of any organisation supporting for any political office a candidate who was not endorsed or approved by the Labour Party. Application for affiliation by the Communist Party was rejected by a 582,000 to 356,000. A resolution forbidding Labour Whips to be given to Mr. Newbold the Communist M.P. was carried by a 270,000 votes to 210,000. Instructions that Labour M.P.s were to oppose all armament votes were negatived by a 244,000 to 208,000. Discussion of the suspension of four Labour M.P.s from the House of Commons was put in hand for a special election fund to meet the costs of the next General Election. Proposals were carried in favour of a Capital Levy, criticism of the Government's Educational Policy and dealing with general matters, e.g. Trade Boards employment of aliens on ships, pure milk, foreign policy &c. Mr. J. R. MacDonald, M.P., was elected the new Chairman for the year.

MINERS

The Miners Federation of Great Britain held their Annual Conference at Folkestone on July 10-14, 1923 with Mr. Herbert Smith in the Chair. Wages had been on the minimum scale during 1922 but by July, 1923 five districts, including South Wales had received advances. Emphatic refusal was given to consider any proposals to return from the present seven hour day to the old eight hour day. Resolutions were carried in favour of two weeks holiday with full pay, an enquiry into miners' blindness (*myopia*), any future wages agreement to include a clause for compulsory membership of Trade Union, present 1d. levy on every ton of coal that expires in 1925 to be made a perpetual one and to be used for miners' pensions, apart from the Old Age Pensions and welfare improvements. The Miners reported a drop in membership from 839,902 in 1922 to 744,617 in 1923. During August, 1923 44,306 coal mining employees were registered at the Labour Exchanges

as unemployed. In the first eight months of 1923 there were 114 strikes, in which 245,000 mining employees were involved these caused the loss of 1,004,000 working days.

RAILWAYMEN

A slight decrease is reported in the membership of the three Trade Unions of Railwaymen from 454,784 in 1922 to 447,374 of 1923. The National Union of Railwaymen held their Annual Conference at Crewe on July 2-7, 1923. Mr. J. Maconbank was in the Chair, and he was re-elected for next year's Conference at York. Apart from resolutions in favour of nationalisation, higher wages, a shorter working day and amalgamation of all Railwaymen's Unions, welcome was given to the scheme of the G.W.R. to help employees to purchase their houses. The Company would lend up to 50 per cent. of value of the house at 5 per cent. the amount of loan and interest being repayable over a period of 20 years. During 1922 234 employees were killed and 15,508 injured whilst working on the railways of Great Britain. The number of unemployed in the Railway Service as registered with the Labour Exchanges on August 27 1923 was 10,764.

FEDERATION OF LABOUR UNIONS

A conference was held in Memorial Hall, Harrington Street London on April 14, 1923 attended by 223 delegates representing 156 branches of various Trade Unions. This very advanced section of the Labour Movement was represented by Mr. Frank Smith at the Second World Conference in Petrograd in November 1922. Resolutions were carried in favour of a 44 hour week, a minimum weekly wage of £4 for adult workers, and full maintenance of all unemployed. At a mass meeting that followed Mr. Tom Mann made an appeal for a general strike. On May 12 1923 the Conference was resumed when the principal resolution carried was that of asking the dockers to strike in the case of any war with Russia. The leaders of this very small section of the Trade Union movement are far from unanimous on the question of politics to be adopted.

SOCIAL DEMOCRATIC FEDERATION

Mr. G. M. Bell presided over the 37th Annual Conference of the Social Democratic Federation at Manchester Hotel London on August 6-9, 1923. Amongst the usual resolutions carried in favour of socialising and nationalising various forms of industry was one dealing with the railways, in which the present grouping of the railways was held to be 'a menace to the interests of the community in every direction' and demanding that in case of nationalisation provision should be made for representation of railway employees in the management. The resolution carried on National Defence favoured a democratic force for national defensive purposes in place of a professional and standing army. There should be universal military training but no private production of armaments. The tendency to oppose militarism and war by a policy of drift was viewed with apprehension. It is on this universal service question that the S.D.F. differs from the I.L.P. and the Labour Party.

TRADE DISPUTES

Generally 1923 up to the time of writing, has been a quiet year in labour disputes. There have been only two outstanding cases, the boiler

makers and dockers. Each might have been avoided without trouble. The lock out of plateis, riveters and caulkers began on April 30, 1923, and was continued in October to enforce the agreement between the Employers Federation and the Men's Federation in regard to overtime and piece rates. Approximately 10,000 workmen were directly affected but indirectly every ship yard in the country was concerned. The dockers were mainly concerned in London and remained out from July 3 until Aug. 20 to protest against the reduction of 1s a day, as previously agreed by their leaders. The Trade Unions concerned did not support the strikers. The men lost. The number of dockers on strike varied from 25,000 to 40,000 and they were instrumental in holding up much trade. Mining strikes were mainly in South Wales and were organised to compel the Non unionists to join the Trade Unions in which endeavours they were temporarily successful.

Month	Disputes	Employees Involved	Days lost
January 1923	71	19,000	117,000
February	41	40,000	337,000
March	52	86,000	834,000
April	25	110,000	1,077,000
May	49	48,000	807,000
June	54	99,000	1,244,000
July	37	95,000	1,665,000
August	45	68,000	1,200,000
September	28	54,000	1,029,000
Which years			
1913	1,459	663,000	9,875,000
1921	763	1,801,000	85,872,000
1922	595	551,000	18,918,000

TRADES UNION CONGRESS

The 55th Trades Union Congress was held at Plymouth on Sept. 3-8 1923 with Mr. J. B. Williams (of the Musicians Union) in the Chair. The comparative figures are—

1866	143 Delegates representing 199,374 members
1895	154
1922	171
1923	167

The drop during the last twelve months is due to unemployment and dissatisfaction with Trades Union management. The Congress was conspicuous for its return to wrangling of a personal nature in public and absence of discussion on important topics. The General Council was instructed to introduce a Bill into Parliament to enforce an 8 hour day and 48 hour week but the resolution that the time had arrived for a 6 hour day was carried by 2,801,000 to 553 votes. *The Daily Herald*—The Trades Union Congress at Southport 1922 recommended joint ownership with affiliation fee of 3d per member per year. Continuous loss was reported on the paper, and the Plymouth Congress decided to continue the publication until the end of December, if the Trades Unions will find £12,500. The position was discussed at a private session. *Resolutions*—Opposition to longer Civil Service day—unanimously. Objection to Co partnership, with instructions to General Council to enquire into profit sharing schemes—unanimously. Registration of Theatrical Agents and Employers—unanimously. Evacuation of Ruhr by the Allies—unanimously. Disapproval of amendment of Trade Board Acts as proposed by Cave Committee. Pensions for the blind mothers, &c. *Back to Unions*—Acrimonious discussion arose over the

campaign to get more members to join the Trades Unions and to stop the decline in membership. Delegates accused one another of using meetings and propaganda for poaching upon allied societies, and thus transferring from other Unions rather than breaking new ground. The drop in two years for the Trades Unions attached to Congress was 2,021,000, or 33 per cent. *Officers*—Mr. Bowerman M.P. retired under age limit from Secretaryship, at a pension of £300 yearly. Mr. Fred Bramley was elected, on fifth count, by 2,822,000 votes to be the new Secretary at £750 per annum on the understanding that he cannot stand for Parliament. Miss M. S. Boudfield was elected the new President at the first meeting of the new General Labour Council on Sept. 26.

UNEMPLOYMENT

The Third Annual Conference of the Organised Unemployed took place in Coventry on April 9-11 1923. The Conference was in favour of Direct Action and decidedly Socialist in tone. About 180 delegates from all parts of the U.K. were present. The increasing number of unemployed has had a terrible effect upon the granting of Poor Relief. A White Paper has disclosed that in March, 1923, 1,226,061 people were in receipt of relief of some kind from the rates, as compared with 380,128 for March 1914. In West Ham during the year ended Aug. 31 1923 the Guardians spent £2,051,698 on unemployment relief and paid in wages to the unemployed £77,199. In the insured industries alone for Great Britain and Northern Ireland there have been 1,200,000 registrations by unemployed persons monthly. On Aug. 27, 1923, the actual number was 1,354,750 an increase of 30,249 on the month.

WHITLEY COUNCILS

The Joint Industrial Councils grew out of the recommendations of the Committee appointed in Oct., 1920 and presided over by Mr. J. H. Whitley. The last Report shows that up to Dec. 31 1922 73 Joint Industrial Councils had been established and of them only 12 were not functioning. Unfortunately the Whitley, or Joint Industrial Councils are not in operation in the Mining, Cotton Engineering, and Ship building Industries but under the Railways Act of 1921 arrangements are in progress for Whitley Councils between the companies and employees on the Railways. The number of workpeople directly covered by the present Councils totals 3,750,000, and of those concerned in various arbitration Councils and bodies the figure is believed to approach 8,500,000 workpeople. District Whitley Councils have been established as a decentralising feature and even in those industries where the national Councils are in abeyance many local Councils are continuing their work.

LONDON'S DEBT

LONDON'S debt substantially increased during 1920-21, the total of £103,787,706 at the end of the financial year being £7,419,843 higher than the aggregate twelve months earlier. The greater part of the increase was in respect of Housing assisted schemes which accounted for £4,691,597. The debt of the London County Council for purposes other than housing increased by £745,306, whilst the Metropolitan Water Board debt rose by £1,523,139. Apart

from housing, the debt of the remaining authorities showed a net increase of £349,823, the principal item being in respect of the Electricity Supply undertakings of the Metropolitan Borough Councils.

The charge for interest and repayment in respect of debt amounted in 1920-21 to £6,019,579 (interest £3,142,045, and repayment £2,877,534), of which £5,373,315 was borne by the rates, equivalent to a rate in the pound of 2s 4 9/16d. Of the total charge £3,209,240 was in respect of rate services, £145,120 in respect of Housing assisted schemes and £2,664,919 in respect of revenue producing undertakings. Commenting on the figures the Finance Committee of the London County Council state—

As the produce of a penny rate was not exceeded in 1920-21 no part of the deficiency on Housing schemes was borne by the Government and the debt charges falling on the rates amounted to £127,351 equivalent to a rate in the pound of 6 7/8d, as follows: Corporation of the City of London £8,716; London County Council schemes, £59,913; schemes of Metropolitan Borough Councils, £58,622. As regards the other revenue producing services the revenues were insufficient to meet debt charges, and of the total charge of £2,664,919 no less than £2,036,824 equivalent to a rate in the pound of 10 7/16d was taken from the rates. The debt charges in respect of the London County Council's tramways amounting to £590,665 were wholly met out of the rates. The total debt charges of the Metropolitan Water Board in respect of 1920-21 amounted to £1,758,757. London's proportion being £414,825 and as the total deficiency exceeded the debt charges the whole of these amounts fell to be borne by the rates. The other revenue producing undertakings involved a total charge on the rates of £31,334.

The net debt attributable to the revenue producing undertakings which exceeds 50 per cent of the total net debt of London, was as follows—

	IN POUNDS (+) OR INCREASE 31 MARCH 1921 () ON 1920	
Water supply London's proportion	£41,603,261 +	£53,139,139
Tramways	8,334,602 +	2,28,032
Electricity supply	5,138,635 +	404,011
Working class dwellings	3,278,000 +	41,033
Housing assisted schemes	5,251,974 +	4,691,597
Miscellaneous	86,104 +	34,074
	£64,207,389 +	£68,864,820

The total net debt outstanding on rate services, i.e., excluding revenue producing services on March 31, 1921, was £41,500,317 or 98 per cent of the rateable value as compared with £40,965,204, or 90 per cent of the rateable value a year earlier. The Committee add that after 1921-22 the tendency to curtail capital expenditure will no doubt be reflected in the amount of debt particularly for rate services with the result that, in the absence of any new development calling for fresh expenditure, a reduction may again be looked for in the debt in the near future by reason of the normal operations of the sinking fund. The heavy charges on the rates in respect of debt for Tramways and Water Supply are exceptional, and will be very materially reduced in subsequent years as a result of the improving financial position of the Tramways undertaking and the exercise of the powers obtained by the Metropolitan Water Board in its Charges Act of 1921.

THE NATION'S WAR BURDENS.

NEARLY five years after the conclusion of hostilities on the European front, a comprehensive return of the nation's war burdens was supplied by the Treasury. Only in regard to casualties and shipping losses was it possible to give figures relating to the whole Empire. The total number of men enrolled was 2,949,496, of whom 6,211,427 belonged to the United Kingdom, 1,605,327 to the Dominions and Colonies, and 1,679,416 to India. The killed totals led 946,023—743,702 from the United Kingdom, 140,623 from the Dominions and Colonies and 61,358 from India—and the wounded numbered 2,121,506—1,695,166 from the United Kingdom, 357,785 from the Dominions and Colonies and 70,859 from India.

So far as expenditure was concerned figures are only available for complete financial years, and for the five years which saw the beginning and end of the campaign the Exchequer issues were £9,590,000,000 of which £1,820,000,000 was raised from direct taxation, £910,000,000 from indirect taxation and other sources of revenue, £5,500,000,000 by borrowing at home, and £1,360,000,000 by borrowing abroad. The war loans to our Allies and to Dominions, excluding relief and other post war loans, amounted to £1,644,000,000. Finance received £453,000,000. Italy £382,000,000, other Allies £659,000,000 and the Dominions £120,000,000.

The shipping losses of the British Empire were estimated at 8,000,000 gross tons, the value of the vessels (at about £70 a ton) and cargoes lost by enemy action being placed at £750,000,000, while the civilian lives lost at sea from the same cause numbered 22,000.

The expenditure of the United Kingdom on war pensions from Aug. 1, 1914, to March 31, 1923, was reckoned at £470,000,000 and the estimated capital liability after the latter date at 832,000,000. Until last March the expenditure on mandated territories totalled £153,000,000.

Of a number of other items of expenditure resulting from British participation in the war the most important are £400,000,000 on unemployment, £225,000,000 on housing, £203,000,000 on the liquidation of the railway and canal agreements and £101,500,000 on the bread subsidy. And the concluding intimation in this statement of stupendous totals was the brief declaration: "N. German Colonies have been assigned to the British Empire."

WAGES—LONDON AND ABROAD

AN interesting attempt to compare the level of real wages ruling for certain typical categories of adult male labour in London with that of similar workers in a number of capitals abroad has been made for the first time by the Ministry of Labour. The method employed by the Ministry aimed at ascertaining the quantities of each kind of food of working class consumption that could be purchased in each city at the retail prices then current with the wages payable for given amount of labour measured in hours. The quantities so procurable were then expressed as index numbers and these were combined to form an average for each of the trades considered. One set of averages was arrived at by taking the simple arithmetic mean of the index numbers and more valuable averages (shown below) were calculated by weighting the index number for each article by a figure

corresponding to the relative importance of that article in the weekly food bill of working class families in the United Kingdom. Current official statistics of retail prices of other factors in the cost of living have not yet been developed in the different countries sufficiently to enable a wider comparison to be made. For the purposes of the comparison statements were obtained by the Ministry from a number of capitals abroad showing for the 1st March, 1st April, and 1st June, 1923 (a) the rates of wages payable to a full workman in 22 selected occupations, (b) the number of hours constituting a normal working day and week in those occupations, (c) the average retail prices of 19 articles of food ordinarily consumed in urban working class families in most industrially developed countries. On the basis of this information the following table was prepared showing the index numbers of comparative real wages in detail for June, with averages for each of the three months, March, April and June taking London as 100.

Trade and Occupation	London	Amsterdam	Brussels	Christiana	Ottawa	Prague	Stockholm	Vienna	Warsaw

VACCINATION AND SMALL-POX

THE past year witnessed renewed controversy in connection with the question of vaccination. The statement given below shows the vaccination per cent of the births, the total number

of small pox deaths registered, the small pox death rate per 100,000 of the population and the deaths from cow pox and other effects of vaccination in England and Wales in each year since the passing of the Public Health Act 1875. The average annual number of small pox deaths during the 17 years 1855 to 1871, was over 4,600, and excluding the epidemic year 1871 the average for the sixteen years to 1870 approached 3,500.

Year	Vaccinations per cent of Births	Small pox Deaths	Small pox Death rate per 100,000 population	Deaths from Cow pox and other effects of Vaccination
1872	85	19,022	22.1	(a)

RENT DECONTROL

THE problem of rent decontrol caused the Government a good deal of political trouble and was responsible for the resignation of three ministers who, defeated at the general election, were unsuccessful when contesting vacancies created to enable them to return to the House

of omnibus. The first phase was the publication of the reports of Lord Onslow's departmental Committee which had been considering the Rent Restrictions Acts. The majority report recommended decontrol in the following summer of houses of the highest standard rent decontrol at Midsummer, 1924 of houses of a standard rent exceeding £35 in London, and £25 elsewhere in England and Wales, and decontrol at Midsummer 1925 of the remaining classes of houses with similar removal of protection in Scotland. The minority report signed by the Labour members of the Committee urged that the protection given to pre-war rentals of £35 in London £30 in Scotland and £25 elsewhere should be continued until 1930, and that as regards other grades of houses protected the restrictions should continue to the same date unless previously withdrawn by Order in Council approved by Parliament, with immediate reductions in rentals.

Subsequently it was announced that higher grade houses would be decontrolled in 1924 unless Parliament decided otherwise, and that all control would end in 1925. Then came the bye elections and the appointment of Mr. Neville Chamberlain as Minister of Health, in succession to Sir Arthur Griffith Boscawen, one of the defeated candidates and a new policy was formulated and approved by the Cabinet. Mr. Chamberlain secured the passage of his bill by conciliatory methods. It continued control of all houses until June 24, 1925, set up a temporary system of 'rent courts' and gave landlords the power to recover possession of houses owned by them before June, 1922 if reasonably required for themselves, their children or any person resident with them or engaged in the whole time employment of themselves or a tenant, houses to be decontrolled when landlords regained possession. Purchasers of houses after that date could obtain possession if they proved that the hardship upon them was greater than that upon the tenant. Tenants were given the right to appeal against increases of rent if houses were not maintained in good repair. After the period of decontrol, tenants were for five years to be protected against the danger of eviction without good reason the County Courts being given power to investigate such cases.

SUNDAY GAMES

THE experiment of permitting games to be played on Sundays in the parks and open spaces under the control of the London County Council which was started in July, 1922 is to be continued. The question was reconsidered in July last by the Parks Committee of the Council, who recommended that for the future the arrangements for the playing of games on Sundays previously approved by the Council be continued, with such minor modifications as may be necessary from time to time. A proposal to withdraw the privilege was defeated at a meeting of the Council by 83 votes to 33. The results of the experiment during its first year were generally satisfactory. No difficulties arose in connection with the playing of bowls, cricket, croquet, golf, hockey or lawn tennis but a few complaints were received by the Council with regard to football, only one of which was serious and resulted in the permits of the club concerned being cancelled. The cost of the additional staff necessary during part of the

year was £640, which sum was more than covered by additional receipts. In no case did the playing of games on Sundays necessitate a man working overtime or on his weekly leave day. The number of letters, petitions, &c. in favour of and against Sunday games presented to the Council up to the end of June, 1923 were—In favour. Letters from 125 organisations and 204 individuals, and 708 petitions signed by 29,773 persons. Against. Letters from 262 organisations and 1,176 individuals and 234 petitions signed by 24,322 persons. The number of games played from Sunday July 23, 1922 up to and including Sunday, June 24, 1923 were as follows—

SUMMER SEASON 1922, 20 Sundays—			
	No. of Clubs	No. of Games	
Bowls—126 links	22	351	
(Cricket—68 reserved pitches	5	40	
Other pitches	7	371

" 75 hard courts	29	1,566	
Total number of games		32,452	

WORKMEN'S COMPENSATION

A BILL was introduced in the House of Commons in May last to amend the Workmen's Compensation Act, 1906 and its amending Acts and to amend the law with respect to employers' liability insurance, the notification of accidents, first aid and ambulance. The Bill as amended by Standing Committee A provided for the repeal of the Workmen's Compensation (War Addition) Acts of 1917 and 1919 but proposed certain increases in the amounts payable under the Act of 1906 either on the death of a workman or as weekly payments during a workman's incapacity. The total amount of compensation payable to the dependents of a deceased workman is limited to £600—compared with £300 under the Act of 1906—but this sum varies with the number and age of children left under the age of 15. In cases of incapacity the Bill proposed to substitute 30s for £1 as the maximum amount of the weekly payment, and whilst 50 per cent of the average weekly earnings remains the basis of compensation, provision is made for increasing this proportion in cases where the weekly earnings are less than 50s. Compensation is payable if the injury disables the workman for more than three days, but is not payable in respect of the first three days of disablement. Certain cases previously excluded from the benefits of the Acts on the ground that the disabled workman was doing something he was not employed to do are brought within the scope of the Act of 1906 by the following clause—'For the purposes of the principal Act, an accident resulting in the

death or serious and permanent disablement of a workman shall be deemed to arise out of and in the course of his employment, notwithstanding that the workman was at the time when the accident happened acting in contravention of any statutory or other regulation applicable to his employment or of any orders given by or on behalf of his employer, or that he was acting without instructions from his employer, if such act was done by the workman for the purposes of and in connection with his employer's trade or business. It is proposed to extend the Acts to certain classes of shore fishermen persons plying for hire with vehicles or vessels hired from the owners (other than under a hire purchase agreement) certain persons casually employed for the purposes of any game or recreation and certain persons employed on ships otherwise than as members of the crew, not covered by the Act of 1906. Further amendments of this Act deal with the notices of accidents references to medical referees, registration of lump sum agreements, power to make agreements as to compensation to workmen disabled by industrial disease, &c.

FOREIGN TRADE

FRANCE

DURING the first ten months of 1923 importations into France were of the total value of 25,620,674,000 Francs compared with 18,568,714,000 Francs in the first ten months of 1922. Exports amounted during the same period to 24,376,220,000 Francs. Against 17,376,284,000 Francs in the same period of 1922. This is thus a balance of 1,244,454,000 Francs in favour of imports as against 1,292,330,000 Francs during the first ten months of 1922.

GERMANY

Germany's expanding trade is attracting some attention and surprise is being expressed at her ability to finance these growing commitments in view of the flight from the Mark. During the first eight months of 1923 Germany bought 506,644 bales of cotton, against 443,343 bales bought by Great Britain, while for the corresponding period of 1922 Great Britain took 125,000 bales in excess of Germany's purchases. German manufacturers appear to have reorganised their businesses and instead of purchasing British textiles in various stages of manufacture, the German cotton mills are engaged on the

raw product as the following table of British exports to Germany show—

Textile machinery (tons)	Nine months ended Sept. 30.		
	1922.	1923.	1923
Cotton yarn, unbleached (lb)	8,984,600	26,866,900	20,054,900
Piece goods, all kinds (sq yds.)	11,605,900	88,276,200	19,566,100

But if Germany is taking less from one industry, her requirements of coal probably due to the Ruhr deadlock have increased considerably, for the nine months to Sept. 1923, 6,100,000 tons were shipped from Great Britain to Germany, against 11,604,643 tons in the first nine months of 1922. The growth of German trade from the zero of the war must make immense strides as time goes on and in face of the generally expected economic collapse of Germany the figures of expanding trade are difficult to reconcile with the story of her impoverishment. When Germany has fixed the amount of reparations with the Allies and begins seriously to stabilise her currency and control her Budget, a great revival of German trading must be expected. But Germany will require to buy as well as to sell, so that the event will not necessarily be disastrous to Great Britain or any other country, and before the War Germany was one of Great Britain's best customers.

THE WORLD'S BAPTIST CONFERENCE

THE Third Congress of the Baptists World Alliance opened at Stockholm on July 21, 1923, to which 250 delegates, including 600 British and 1000 Americans, were registered. The first Congress took place in London in 1907 and the second at Philadelphia in 1917. British delegates had to live on the P.P. line, *Marble* owing to absence of sufficient hotel accommodation for so large a Congress. The Governor of Stockholm welcomed the Congress, and delegates preached on Sunday in all the churches in Stockholm. The Archbishop of Canterbury gave authority for a Baptist minister to occupy the pulpit of the English church at Stockholm on the occasion. A Congress pageant followed in the park when speeches were made from specially erected platforms. The work of the Baptists throughout the world came under consideration, and arbitration and co-operation were supported in place of Socialism. The Rev. Dr. Shakespeare carried through the organisation as European Secretary of the Baptist World Alliance.

MOTOR LICENCES IN GREAT BRITAIN—The Ministry of Transport's return of motor licences issued from Dec. 1, 1922 to Aug. 31, 1923, shows that at the latter date the number of motor vehicles in respect of which licences were current was 1,105,000, including 384,000 cars taxed on horse-power, 430,000 motor bicycles, 173,000 commercial goods vehicles and 86,000 motor hackney vehicles (taxicabs, &c.). This is an increase of 68,756 cars as compared with the corresponding period in 1921-22, an increase of 51,195 motor bicycles, 22,358 commercial motor vehicles, and 8,351 hackney cabs motor omnibuses &c. The increase of private motor carriages is 22 per cent., of motor cycles, 14 per cent., and of commercial vehicles nearly 14 per cent. Yet while the numbers have increased

the average tax paid per motor has been reduced in value in all but one case, for whereas on Aug. 31, 1922 the average tax paid in respect of a whole year's licence was £17 12s for cars, taxed on horse-power, £2 13s 6d. for bicycles, £2 13s for commercial goods vehicles, and £23 10s for motor hackneys, these respectively produced at Aug. 31, 1923, £16 18s 6d for cars, £2 11s 6d for bicycles, £2 17s for commercial goods vehicles and £25 11s 6d for motor hackneys. These figures reveal the fact that as regards private cars the horse-power of the engine is slightly reduced on the average, being under 17 horse-power in place of 17½ horse-power in 1922. Also that the average motor bicycle has paid 2s less, and so is of slightly less weight and engine power, though the hackney vehicle has paid an increase average tax of about 2s.

Public and Private Wealth

A DECLINE IN THE NATIONAL INCOME

THE latest return of the Inland Revenue Commissioners (issued just as WHITAKER'S ALMANACK goes to press) is for the financial year ending March 31, 1924, and makes its appearance over twenty months after the close of the period to which it relates instead of, as in pre war days, some four months afterwards. Even at this interval it is seriously incomplete as many of the more important figures are given only as "estimates."

This report shows the gross income of the nation to be estimated at £3,250,000,000, of which it is estimated that £80,000,000 represents income under the exemption limit, and other reductions and deductions allowable amount to another £720,000,000, making approximately £2,450,000,000 of income upon which Income Tax is levied. For the first time for many years, the total figure shows a decline from the preceding year instead of the growth to which we have been accustomed, a steady growth in the pre war period and a rapid growth during the later years of the War, and the two years of the post war period. The estimated decline for the year is approximately £250,000,000. The explanation of the decline is probably to be found not so much in a decline in real wealth as in the shrinkage of prices from the excessively inflated level to which they had attained during the later years of the War and the earlier part of the post war period.

The net receipt from Income Tax consequently fell by nearly £6,000,000 to a sum of £334,933,650 as against a Budget estimate of receipts from this source of £349,750,000. This receipt is almost exactly eight times the receipt from the tax in 1914, although the normal rate of tax has risen only a little over five times, namely from 1s 2d in the £ to 6s in the £. The lowering of the old exemption limit of £160 to the present £130, has evidently tapped a large number of incomes, and that coupled with the rise in wages and prices has brought a large number of persons within the scope of the Income Tax Acts who had previously been outside them.

Super tax produced a sum of £61,351,000, levied on an estimated number of 50,000 super tax payers. This compares with a receipt of approximately £3,350,000 levied on 13,000 super tax payers in 1914, but here again a very large number of persons have been brought within the scope of the super tax by the lowering of the minimum from £5,000 to £2,000, and the increase in prices.

At the other end of the scale the income of manual wage earners assessed for income tax during the year under review amounted to nearly £945,000,000 and the total net income assessed to tax (after deductions for exemptions and statements) amounted to nearly £674,000,000.

For the first time, this report contains a table showing the estimated number of individuals with total incomes above the exemption limit, subdividing them into those entirely relieved from tax, by the operation of abatements and allowances, and those chargeable to tax. These figures form the most valuable guide as to the incidence of the tax whereas in former years the only indication given was the "number of assessments," which were quite valueless as a guide, because as single individuals might, and often

did, pay under several different assessments. It is important to bear in mind when studying this table, that the limit of exemption was reduced from £160 to £130 in 1915, but at too late a period in the year 1915-1916 to enable the department to make complete assessments on the new range of income which consequently only became really effective in the financial year 1916-1917. These figures are as follows:

Year	Number of Individuals		
	Total	Relieved from Tax	Chargeable with Tax
1913-14	1,200,000	70,000	1,130,000
1914-15	1,240,000	100,000	1,140,000
1915-16	1,480,000	120,000	1,360,000
1916-17	3,264,000	1,080,000	2,184,000
1917-18	4,476,000	1,520,000	2,956,000
1918-19	5,747,000	2,200,000	3,547,000
1919-20	7,800,000	3,900,000	3,900,000
1920-21	6,150,000	3,150,000	3,000,000
1921-22*	5,000,000	2,600,000	2,400,000
1922-23*	4,750,000	2,500,000	2,250,000

Two thirds of the actual income of the country assessed to tax is provided under Schedule D (profits arising from trade, profession or employment) and 21 per cent under Schedule E (salaries of Government Corporation or company employees) about 7 per cent under Schedule A (income from the ownership of lands, houses, &c.) and the balance from Schedules B and C (profits from the occupations of lands, and income from British and Foreign Government Securities taxed by deduction at the source). It is somewhat curious, in view of the housing shortage that the profits from the ownership of houses is almost stationary while that from the ownership of lands shows a slight loss during the last eight years. The explanation would probably appear to be that while there is a shortage of small and medium sized houses there is a glut of large houses and mansions whose owners cannot now afford to live in them, and for whom sufficiently wealthy tenants can not be found, and the loss of income on the latter is approximately equalled by the increase from the former.

INCREASING COST OF REVENUE SERVICES

A disquieting feature of the report is the sharp rise during the last few years in the cost of the Inland Revenue Services. During the closing stages of the War approximately the same amount of Revenue (£660,000,000) was collected by the Inland Revenue Department, but whereas in 1918 the cost was only 0.50 per cent of the amount collected, the cost rose in 1921 to 1.35 per cent, the actual cost of collection being in the first case £3,862,000 and in the latter £8,945,000. There appears to be no possible justification for the cost of collection of the same amount having increased by over £5,000,000, or over 130 per cent. The increased

* The figures for the last two years are estimates* by the department.

cost as compared with the preceding year amounted to £375,000 although £97,234,000 fees was collected. Here would appear to be an opening for the immediate saving of about £5,000,000 in the National expenditure in one small department the only possible objection being the vested interests of the officials concerned. The simplification of the needlessly abstruse form of the Income Tax return would save further large sums not only in the cost of collection to the department but in time and worry to the individuals concerned as well as in the case of the latter, the payment of fees for expert assistance and advice in dealing with these forms.

INHABITED HOUSE DUTY

An interesting sidelight is thrown by the figures for the Inhabited House Duty on the housing problem. This duty is levied on all dwelling houses (including residential shops, hotels, &c.) over the annual value of £20 and is charged at 3d in the £1 on all private dwelling houses of an annual value of between £20 and £40 and at 2d in the £1 on all other classes of dwelling houses within those limits at double that rate where the value exceeds £40 but does not exceed £60 and at treble that rate where the annual value exceeds £60. These figures show a decline as compared with 1913 and 1914 since when the duty has for all practical purposes been stationary, there having been a slight increase in the £20 and £40, counterbalanced by a slight decrease in those of about £60 in annual value. One knows that in the year under review a large number of houses was built both under the Housing schemes of local authorities as well as under the subsidy scheme for houses built by private individuals, and having regard to the prices ruling at the time practically all of these houses would come within the scope of the Inhabited House Duty. Consequently the loss by reason of the larger houses being out of occupation must be very considerable. The department has cognisance of every house erected and occupied and the figures regarding the number of such houses are at the present time of the greatest importance but the only information given to the taxpayer on the question of these numbers in this somewhat expensive report is a space in the table that is blank except for the words 'Not Available.' This phrase in the reports took its rise during the War when it was quite possible not in the national interest to disclose to the enemy the precise nature of our resources but it is being continued in Government statistics these many years afterwards. Certainly on a matter so important to the social well-being, the fullest information should be given especially when it is in the possession of the departments.

CONTINUED GROWTH OF LIFE INSURANCE

The phenomenal growth in the last few years in life insurance (of which allusion was made in WHITAKER'S ALMANACK last year) still continues, but the information is now only obtainable from the returns of the various life insurance companies, as the Inland Revenue Commissioners have now ceased to give this important information separately, and simply give a total sum which includes life insurance premiums with

abatements, relief in respect of wife and children, earned income allowance and personal allowances.

STAMP DUTIES

The receipt from stamp duties for the year 1924 as showed a sharp decline from £25,542,000 to £19,577,000 of which nearly two and a half millions occurred in respect of conveyances and nearly £600,000 decrease in the receipt from cheque stamps. There was also a decrease of a quarter of a million on stamps from bills of lading and shipping policies, all due to the trade decline that had then begun to set in so strongly.

INCOME FROM ABROAD

The sub-divisions of Schedule 'C' show that income received from Indian Government securities during the year amounted to £9,366,000 the next largest receipts being £4,183,000 from New South Wales, £2,675,000 from Canada, £2,230,000 from New Zealand, £1,965,000 from Brazil, £1,728,000 from Que. Island, £1,489,000 from Victoria, £1,135,000 from Cape Colony, £1,715,000 from China and £873,000 from Japan. At the other end of the scale were totals of £7 from Fiji, £15 from Zanzibar, £32 from the Republic of Liberia, and £110 from Serbia. Income from Turkey amounted to £338,000, from France £523,000, and from Belgium £239,000.

ESTATE, &c., DUTIES

Capital Values—During the year ending March 31, 1924, Estate &c. Duty was levied on capital passing at death of a gross value of £461,329,462 and of the net capital value of £410,834,589. The bulk of this was furnished by English estates of a gross capital value of nearly £300,000,000 and a net capital slightly exceeding £357,000,000. The number of estates involved was 105,566, of which 84,544 were estates in England. Only 5,567 of these estates exceeded £10,000 in value, 5,145 were between £5,000 and £10,000 in value, 24,732 were between £1,000 and £5,000 in value, and 70,151 were under £1,000 in value. Of the capital involved, £141,801,000 was of estates of under £10,000 in value and slightly over £98,000,000 by those under £5,000 in value. £278,633,000 was furnished by the 5,567 estates exceeding £10,000 each in value. **Insolvent estates** were 1,212 in number, as compared with 1,034 in the preceding year, both showing a considerable decline as compared with pre-war years, when the number usually varied from 1,700 to 1,900. The number of estates liable to duty has shown a steady increase (with but a slight set back occasionally) for many years, and has risen from 75,000 in 1914 to 105,000 in the year under review. The bulk of the increase occurs in the smaller estates, those under £5,000 in value having increased from 32,800 to 44,600, and those under £10,000 from 38,600 to 45,000. This does not point to any notable increase in real wealth, as it is fully accounted for by the rises in wages and prices as well as by the closer collection by the department. On the whole, figures tend to show that having regard to the increase in prices, the real wealth on which these duties are levied has shown no appreciable increase since the pre-war period. Another factor which has quite a definite bearing on the matter is the excessively

heavy rates of duty now in force, which range up to 40 per cent in estate duty on the capital involved, and in all but small cases, a further levy on the remaining balance by way of legacy duty ranging from 1 to 10 per cent. This has had the result during the past few years, in several cases where large estates are involved, of the estates being handed over to an intended successor during the lifetime of the testator, and if the testator makes such a gift absolutely, without retaining any right or interest therein and survives the gift for a period of three years such gift is not liable to duty or if the gift be to a public or charitable institution more than 12 months prior to the death, such gifts are exempt.

It would appear that the limit in expansion of revenue from this source has already been reached and for some years past the increase of the amount received has hardly been commensurate with the growth in the rate of duty (which only 15 years prior to the year under review was at a maximum rate of 8 per cent) and the natural increase in the population and in the total wealth of the community. This would appear to be borne out by the serious falling off in the receipt from this duty during the first 32 weeks of the financial year 1923-24, when the receipt was less than that for the corresponding period of the previous year by £588,000, although the duties were levied at the same rate. The net capital value of the estates liable to duty in the year ending March 31, 1924, was in round figures £6,500,000 levied on 74,642 estates whereas in the year ended March 31, 1922 the net capital value was roughly £4,200,000 levied on 105,956 estates. The greater part of this latter year was the period of the peak of high prices and property passing, by death, would be valued for duty at the prices then current. Prices during the latter period averaged considerably over 100 per cent in excess of pre-war prices but the increase in the valuation of the estates was only 41 per cent, notwithstanding that the increase in the number of estates alone was 40 per cent.

Yield of the Duty.—The net receipt from the duty during the year ended March 31, 1922 was £52,520,987 as against a Budget estimate of £48,000,000 which estimate was slightly more than the actual receipt in the preceding year. The Budget estimates for the last two years appear to have been based on the actual receipt during the year 1921-22 or at the rate of £1,000,000 per week. At the time of going to press the receipt from the duty is short of the proportionate amount of the estimate.

During the year under review, of a total receipt from the duty of roughly £52,000,000 a sum of £21,765,000 was satisfied by the surrender of certain War Stocks and Bonds, Funding Loan and Victory Bonds of somewhat over 40 per cent of the total. This results in a reduction by that amount of the capital indebtedness of the State but it reduces the amount of money available to meet current expenditure. This is as it should be, as these payments must of necessity be made out of capital, and are levied on the capital, and should therefore not be treated as income.

Of the total sum received by way of Death Duties £6,102,148 was received from the Legacy Duty and £1,198,227 from Succession Duty, the balance being provided by the direct Estate Duty in its various forms.

Of the capital assessed to duty the largest proportion was in shares and debentures of joint stock companies which accounted for over £22,000,000 land houses, mines, timber, &c (all classed as realty) accounted for £103,000,000, British Government and Municipal Securities for £70,000,000, and cash in house or at bank for slightly over £36,000,000, with a further £12,000,000 for money on bonds, bills, notes and other securities, and £15,500,000 for money out on mortgage of real estate. Duty was paid on £14,700,000 on Life Policies while household effects amounted to almost exactly the same sum. Women's estates in England were 41 per cent in number and 28 per cent in amount of the total.

Of the property subject to legacy duty about 15 per cent was left to a husband or wife, 40 per cent to children or parents, 30 per cent to brothers and sisters or nephews and nieces, 21 per cent to uncles, aunts and cousins and about 121 per cent to more remote relatives or strangers in blood.

Duties in the Channel Islands.—It is interesting to note that there are no Death Duties in the Channel Islands, and only a nominal income tax the latter having been imposed principally on account of additional War expenditure. Guernsey in particular pays its way and has a balance over to remit to London on a taxation so light as to make it appear, at first sight, that it is impossible for the island to pay its way. The secret of the success of the Island's Budget is in the rigid economy exercised in the expenses of administration. The principal receipts are from the liquor duties, which produced in 1922 a sum of £36,479 or an average per head on the population of 19s 5d. All of the duties being less than one fifth of the corresponding duties levied in England. A small import duty ranging from 1s to 3s 6d per ton on all imports produced about £23,000 and duties on tobacco and cigars (ranging from 1s 6d to 2s 4d per lb) produced £16,237. The Income Tax at 6d in the £ was estimated to produce rather over £20,000. The total ordinary revenue of the island for 1922 amounted to £177,857 and the corresponding expenditure to £151,350.

The estate has been for many years in the island a form of capital levy for providing the expenses of what would be in England classed generally as the local rate but after this has been in operation for many years it has been agreed that it is quite unsatisfactory and proposals are shortly being submitted to the States for the expenses to be found by an occupation rate, similar in many ways to that in force in England and doing away with the capital levy. In a small insular community it is easier to see the effect of any particular kind of taxation on the body of taxpayers at large, as well as on the trade of the community, and it is of especial interest at the present time to note that, after trial taxation in the form of a capital levy is found to be inequitable as well as unsatisfactory in other ways, and that a change is being made to the manner in which these taxes are raised in England.

It is possible that at no very distant date the Islands may adopt some form of Death Duties, as proposals to that effect are mooted, but at present such are not in operation and the proposal does not appear to be too favourably received.

THE DEATH DUTIES IN GREAT BRITAIN

The Death Duties on the Statute Book are seven in number, but, of these, three only are payable in connexion with deaths occurring at the present time, namely, Estate Duty, Legacy Duty and Succession Duty. The remaining four, namely, Probate Duty (in Scotland called Inventory Duty), Account Duty, Temporary Estate Duty and Settlement Estate Duty are leviable in connexion with deaths which have occurred during certain specified periods, the last of which expired on the 12th May 1914. The three duties which remain chargeable in relation to deaths occurring at the present time may be divided into two classes. The first class is represented by the *Estate Duty*, a duty payable

with reference to the passing of property on death; the second comprises the *Legacy Duty* and the *Succession Duty*, each of which is a duty payable with reference to the acquisition of property by beneficiaries. The following table includes particulars for Ireland for the entire year 1921-22. The description of the duties is, however, limited to their operation in Great Britain as at the date of this Report.

The Net Receipt of the Death Duties in the year 1921-22 was £52,520,987 as compared with £47,181,081 in the previous year. The details for the two years, with the increases and decreases are shown in the following table—

Net Receipt—United Kingdom
(Excluding Northern Ireland from November 22 1921)

	Net Receipt		Increase	Decrease
	In 1921-22	In 1920-21		
	£	£	£	£
Estate Duty (including Settlement Estate Duty)	45,145,725	40,613,627	4,532,098	—
Probate (and Inventory) Duty	14,785	14,004	781	—
Account Duty	1,154	1,383	—	229
Temporary Estate Duty	1,693	4,204	—	2,511

* Capital transferred to other classes exceeded that brought into this class

The Year's Weather

(1900) October was abnormally dry, with a rather low temperature and a considerable amount of sunshine. Throughout the greater part of the British Isles the rainfall totals showed a large deficiency, this being most noticeable in the centre of England and Wales. Over a very large area less than 25 per cent. of the normal was measured, while in the Cheshire plain the amount was only a little over 10 per cent. At Liverpool the total for the month was only 0.28 in compared with an average of 3.27 ins. Among the small areas in England, Wales and Ireland over which the month's rainfall was equal to or only slightly in excess of the normal, were the eastern parts of Kent the extreme north-east of England and parts of Northern Ireland. In Scotland the deficiency in the amount of rain was not quite so marked, rather more than 50 per cent. falling over the greater part of the centre and east, with amounts equal to 75 per cent. of the normal falling in some of the eastern parts. At Lottland Bay (Isle of Wight) no rain fell from the 6th to 25th at Veltlam (York) it was the driest October for at least 42 years and at Blundellsands (Lancs) the driest for 47 years.

Over the greater part of the country the mean temperature was below the normal especially in the southern part and was most marked during the latter end of the month. The weather at the beginning was mild with south westerly winds and day temperatures in England above the average. By the end of the first week, with north easterly winds blowing, temperature had fallen so that by the 6th the highest reading over England did not exceed 62°. Towards the end of the month a more marked fall had taken place and in London on the 26th, 28th, 29th and 30th the highest temperature throughout the day failed to exceed 45°. On the morning of the 26th an unusually severe frost for the time of year was experienced with a screen temperature of 28° at Kew. This reading was the lowest recorded at Kew in any October since 1905. Snow and sleet fell in the north on the 27th a slight snow shower in London on the 28th and a heavy fall of snow in the south-west of England on the 29th. The latter half of the month was severely cold in Dublin on the 28th and 29th the high range of the Dublin and Wicklow hills was snow capped. With the exception of the Channel Islands, sunshine was well above the average in the north-west and east of England the amount of bright sunshine exceeded the average by rather more than one hour per day.

November was an unusually dry month with a good deal of inland fog. The general deficiency in the amount of rain over the British Isles in October was continued in November, thus giving two consecutive months of abnormally low records. Taken as a whole the rainfall was the smallest recorded in November since 1909. In Co. Waterford the scanty falls of October and November greatly diminished the water supply and caused rivers, streams and wells to become unusually low. Over the British Isles generally the largest deficiency occurred in a broad belt extending from the south-west of Ireland to the north-east of England, culminating at Dublin in a deficiency of 88 per cent., 0.31 in compared with an average

of 2.67 in. Less than a third of the normal was recorded over a considerable tract near the Scottish border, and from 50 to 75 per cent. over the greater portion of southern England. The general rainfall expressed as a percentage of the average was England and Wales 55 Scotland 70 Ireland 42 British Isles 56. The mean temperature of the month was below the average over the greater part of England including the Channel Islands, the deficiency being most marked in the south-east. In both Scotland and Ireland the mean was above the average. During the first ten days the weather was generally of an unsettled character. On the 1st a warm south-westerly wind gave place to a cold northerly one which brought sleet and hail showers. This was succeeded by a spell of fairer weather. The week ending the 18th was abnormally mild and it may be interesting to recall that at this time Edinburgh was warmer than Jersey and the Isle of Wight and Balmoral was warmer than London. On the 21st London experienced a remarkable gloom or smoke pall in which darkness intense as that of night persisted almost throughout the day.

Sunshine varied considerably in different parts and the total distribution was somewhat irregular. This was to a large extent due to the prevalence of fog. A dense fog prevailed in Glasgow on the 20th. The north-east of England proved to be the most sunny district, receiving an amount equal to an excess of nearly 50 minutes per day. In Scotland the month was unusually sunny towards the south and east, but somewhat cloudy in the north-west. Aurora was seen at Banff on the 28th.

December was mild with a mean temperature everywhere in excess of the average, but was appreciably below that of December, 1901. The first part of the month was on the whole fine with westerly winds and mild weather over the British Isles but by the 18th a stormy period set in and there were very few days on which the wind did not attain gale force on one or more parts of the British Coast. On the evening of the 18th southerly to south-westerly gales were blowing and thunderstorms were experienced in many places. In the early hours of the 20th a depression appeared at the mouth of the Channel accompanied by gales and heavy rain over southern England. As the system passed to the north-eastward it brought snow and sleet to Scotland and some parts of England. This was followed shortly after by heavy rain and thunderstorms, particularly in the western districts. The mild character of the month may be shown by the fact that at Dornoch (Sutherland) three varieties of primroses were in bloom, while a garden in Caigen (Kirkcudbright) still showed many blooms. Scotland had both the extreme highest and extreme lowest temperature recorded for the whole of the British Isles during December. There were 50° F at Banff on the 12th, and 15° F at Balmoral on the 18th.

With the exception of Eastern England, the rainfall over the whole of England, Wales and Ireland was in excess of the normal. In Scotland there was a deficiency which, though widespread, was not very large. Deviations from the normal of more than 50 per cent. were rare and occurred for the most part in a wet patch in the centre of Yorkshire. In many places more than an

inch of rain fell in the 24 hours, among the heaviest of which were 2.00 on the 21st at Ashburton (Devon) 2.05 at Fort William (Inverness) on the 12th, and 1.97 at Wistanstow (Shropshire) on the 19th. Thunderstorms occurred in many places during the closing week of the year.

The distribution of sunshine showed a clearly marked contrast. The north of Scotland, with the whole of the eastern part of England and the Midlands had an excess compared with the normal, while the whole of Ireland the western parts of England and Wales, with the Channel Islands had a deficit. Thus while northern Scotland enjoyed over 60 hours more than the average there was a shortage of nearly 145 hours in the Channel Islands.

(1923) *January* was characterised by a mean temperature well above the average the excess ranging from 1.5 F in the Channel Islands to 4.5 F in eastern Scotland. Not only was the mean temperature above the normal for the month as a whole but exceeded the normal in each district for each week of the month. During the first few days the weather was unsettled with somewhat heavy rain at times between which there were considerable bright intervals. Coastal gales blew in the beginning of the month and again on the 9th and 10th. In the rear of a deep depression which passed over the extreme north of Scotland at this time were northerly winds associated in Scotland with snow, sleet and hail showers. On the 17th fog and frost prevailed in London, the maximum temperature at Kew remaining below the freezing point all day. Yet neighbouring coast stations had temperatures from 20° to 25° higher and from 6 to 7 hours bright sunshine. The most remarkable feature about this fog was its patchy character with many sudden changes from thick fog to bright sunshine in a short distance. Some places such as South Kensington, had fog continuously all day while others such as Hampstead, had no fog at all. At many stations towards the end of the month the minimum temperature for four days was higher than the average maximum temperature of the month. At Hodsock Priory (Notts) vegetation was unusually forward. Cowslips were in full bloom on the 31st in the Isle of Wight and at Willoughton (Lincs) pansies and primroses were in bloom near the end of the month and roses were budding. The abnormal mildness which had marked the winter in Scotland was maintained through January, so that at the close of the month that country had experienced a milder January on only two occasions during the past 60 years, and only once had the period November to January had a higher mean temperature.

The duration of bright sunshine was appreciably above the average in the east of Scotland, the whole of Eastern England and the Midlands there was a deficiency in the north of Scotland, the whole of Ireland and the western districts of England. The amount recorded on the eastern side of England was equal to about 25 per cent of the possible, that of northern Scotland being only 10 per cent. The total amount at Yarmouth (71 hours) was more than double that of the previous January. The sunniest days of the month were the 6th, when many places had from 6 to 7 hours, the 12th and 12th, when from 5 to 6 hours were general, and the 23rd, when many places had more than 7 hours. There was an unusual absence of snow throughout the month. Thunderstorms occurred

locally between the 9th and 12th. Hail fell on several occasions but not in any large quantity.

February was a mild and extremely wet month. Rainfall was so heavy in many places that the amount exceeded that of any previously known in February. At a very large number of places the ground was muddy for more than half the month while some places were wet and muddy every day. In Dublin the rainfall was more than three times the average, the amount measured (5.75 ins.) establishing a record for that city. Considerable falls of snow occurred in Scotland and northern and central England in the latter half of the month especially on the 21st, on which date thunderstorms were experienced in the London area. On the afternoon of this day hailstorms of considerable severity occurred in the south-eastern counties of England. In the general snowfalls which occurred in Scotland after the middle of the month, and in northern and central England mainly between the 18th and 24th and which in some instances took the form of blizzards, the ground was covered with snow in some places for at least six days. Over the eastern districts of Scotland, a large part of England and Wales, and the eastern part of Ireland, the rainfall was equal to more than twice the average, while in a large area extending from the north of Cornwall to Staffordshire the amount was more than three times the average. At some stations in this belt with observations extending back for more than 100 years it was the wettest February on record.

The mean temperature for the month was everywhere above the normal, and during the opening days was remarkably high for the time of year. In Scotland the maximum temperature of the month occurred very generally on the 21st or 22nd, and in very few cases was the reading below 50° F. It reached 56° at Edinburgh and as far north as Gordon Castle. The highest temperature in England and Wales was 61° at Hodsock Priory (Notts) on the 21st. At Rhayader on the 5th the temperature on the ground went down to 15° F.

Except in the north of Ireland sunshine was everywhere deficient the shortage being more than an hour per day both in the east of Scotland and the north east of England, where the percentage of the possible was only 14 and 15 respectively. Only in the north of Ireland and the Channel Isles did the percentage exceed 25. There was a general fog in London and the south eastern counties of England throughout the 14th and on the morning of the 15th.

March was mild and dry. The month might be roughly divided into three periods, a mild unsettled week two weeks of easterly winds and rather cold weather, and a warm week with southerly winds. During the first week south westerly winds were predominant, and the weather generally mild and unsettled. Rain was seldom heavy, and some days had a considerable amount of sunshine. A somewhat cold easterly type of weather prevailed from about the 7th to the 20th, except on the 13th, when a low pressure system passed rapidly up the English Channel, accompanied by heavy rain in London and the south of England. Unusually high day temperatures were registered about the 27th. At Kew on this day there was a maximum of 68° F., a reading for March which has only once before been reported during the past 50 years. March was the fourth month in succession with a mean temperature above the

average, the greatest excess being 3.4° F in the north of Scotland. Only in the north east of England and the south of Ireland was the excess less than 1° . The last week of the month was the warmest, the deviation from the normal varying from an excess of 4.4° F to 6.0° F. In Scotland the period November to March was the mildest since 1881-1882. Day temperatures at some places in England and Wales reached 65° F on the 27th and 65° F at some places in Scotland on the same date. Ground frosts were fairly numerous, the lowest reading being 15° F at Renfrew on the 24th.

In a region extending from Gloucestershire to the Sussex Coast and including the London area, and in a district embracing the south west of Ireland, the rainfall of the month was above the average. Two large tracts had less than half the normal amount. These were the northern part of Scotland (where over an extensive area the fall was less than one third of the normal) and a belt comprising north west Wales, Lancashire, the Lake District and the south east of Scotland. At Gordon Castle (Sutherland) it was the driest March for at least 50 years. There was an unusual absence of snow in Scotland and very little in England and Wales. Except in Ireland and the North of Scotland sunshine was generally below the average. While in the north of Scotland the amount was equal to an excess of more than an hour and a half per day, in the Midland Counties there was a deficiency of more than an hour per day, which yielded a percentage of the possible of only 21. The sunniest days were the 17th, 26th, 27th, and 29th, the highest daily amount being 19 hours at Crathes (Kilmadine) on the 26th, the same at Folkestone on the 27th, and at Douglas, Isle of Man on the 29th.

April was cold and rather wet. The warmest weather of the month occurred during the first fortnight, particularly on the 4th and 12th, when in the midland and southern counties temperature rose to 60° F or slightly above. A cool easterly type of weather prevailed from the middle of the month until about the 25th, when there was a change to a warmer south westerly type. During the cold period, day temperature seldom exceeded 55° F while at night it frequently fell below the freezing point on the ground. Mean temperature on the whole did not differ much from the normal, the greatest deviation being a deficiency of 1.0° F in the South of Ireland and the west of Scotland and of 1.8° F in the east of Scotland. In no district did the excess equal 1.0° F. In almost every part of the British Isles each week of the month was colder relatively to the normal than the preceding one. A frost in Sussex on the 9th did a considerable amount of damage to the fruit blossom and injured the plum blossom in Herefordshire on the 23rd, 24th, 27th and 28th. The lowest temperature on the ground was 14° F at Rhayader on the 23rd, 13° F at Renfrew and 12° F at Blackpool on the 24th.

For the most part the rainfall of the month was above the average. There were, however, two large areas over which the amount was below the normal. The first comprised north western and part of central Scotland and the second that of the east coast of England, part of Cumberland and the whole of East Anglia. The driest part of the British Isles was eastern Suffolk, with less than 50 per cent. of the normal, the wettest was southern Hampshire and part

of the Sussex Coast, where over 200 per cent. of the average was registered. A magnificent display of lightning was seen in Sussex and parts of Kent on the evening and night of the 11th, in connection with a thunderstorm in the Brighton neighbourhood. Thunderstorms occurred in southern Scotland and very generally in England and Wales on the 12th, and were widely experienced in Scotland on the 28th. Sunshine was appreciably below the average, except in the north of Scotland, where the excess amounted to an equivalent of 25 minutes per day. The first three weeks of the month constituted the dull period. During the last week sunshine was about the normal in most places several stations having a daily record of 13 hours.

May was mainly dull and cold. There were a few exceptionally warm days soon after the beginning of the month, but the general character was decidedly dull and almost wintry. The first week was the warmest, during which temperature rose locally in the south to between 75° F and 80° F but within a few days this dropped from 20° F to 20° F. After the 9th day temperatures seldom exceeded 60° F, and in some cases never reached 50° F. There were many ground frosts during the month. Considerable damage was done to crops by frost on the 24th, especially in the midland and eastern counties. At Cheltenham it was the coldest May on record at Dublin the coldest since 1869, while at other places the month was the coldest May for over 20 years. The greatest deviation of the mean temperature from the normal was in Scotland, in the eastern part of which there was a deficiency of 4.0° F, the least deviation was a deficiency of 1.2° F in the eastern part of England.

The distribution of rainfall considered in relation to the normal was very irregular. England as far south as the Wash, and nearly the whole of Wales had an excess, in many places of considerable amount. In parts of Cardigan and Merioneth nearly twice the normal was recorded. Other wet areas were the London district, lower Thames Valley, Kent, Surrey, Sussex and Cornwall. Elsewhere the rainfall was less than the average, the deficiency in some cases being very marked. In Scotland the line of normal rainfall cut that country roughly into halves, the northern part being wet, and the southern generally dry. Keith (Banff) had about four times the normal fall and was the wettest May for the last 40 years. In Ireland the amount was generally less than the average, some parts of Cork receiving less than 40 per cent. of the normal. As an instance of the irregular distribution of the rainfall it may be mentioned that while at Meltham (York) it was the wettest May since 1886, at Ipswich the amount recorded was much below the average. There were frequent falls of snow in Scotland between the 9th and the 17th, the falls being abnormal with a good deal of drifting on the high ground in the north. At the end of the month rivers in the north-east were in flood. Snowfalls, usually light, occurred in England during the same period. Hail showers were frequent and very general. Falmouth had hail every day between the 11th and 16th and Markree Castle (Sligo) between the 9th and 17th.

Sunshine was everywhere below the normal, the amount at a very large number of stations being well below 40 per cent. of the possible. Compared with the normal the greatest deficiency

occurred in England east and the Channel Islands, where the shortage exceeded 15 hour per day. At Greenwich the deficiency was equal to nearly 18 hour per day.

June was dull, cool, and dry. The dull, cool weather which prevailed during the last three weeks of May characterised the greater part of June. In Scotland very cold weather was experienced between the 3rd and the 13th. On the morning of the 13th Balmoral registered a temperature of 27° and Braemar of 26°, and on this same day the highest day reading at Nairn was only 50°. The period April to June was in Scotland, the coldest in any year since 1879. The temperature of the ground at Meltham (Yorks) was the lowest in any June since observations commenced in 1885. Ground frosts occurred at many places 26° being registered at Cambridge on the 3rd. The mean temperature of the month was everywhere below the average, the deficiency ranging from 0.7° in the south of Ireland, 1.9° in the Channel Islands to 3.3° in eastern England. The extreme readings for the month were 80° in London on the 23rd and at Perth on the 28th and 26° at Braemar on the 13th.

Except in the north of Scotland where there was a moderate to large excess of rain, the month was remarkable for its dryness. Loch More (Sutherland) had considerably more than twice the normal. In central and southern England the amount was only from 20 to 30 per cent of the normal and from 30 to 40 per cent along the east coast. Some places in the Lake district had up to 77 per cent. Southport experienced one of the driest Junes on record. At Newquay during 31 years only one drier June had been known while on only two occasions during the last 50 years has the total fall at Kew been as low as a quarter of an inch.

The south of Ireland was drier than the north, and in a small area centred around Cork the total monthly fall was only 5 per cent of the average. In a month so persistently dull the sunshine was naturally below the normal. In Scotland the general deficiency was more marked in the west than in the east. Stornoway had the cloudiest June on record while at Edinburgh the sunshine was not much below the normal. The sunniest days of the month were the 11th on which Harrogate recorded 16½ hours, the 23rd, the 26th, when Leicwick had 16½ hours, and the 29th.

There was a thick fog at the mouth of the Channel on the 9th, and at Shosburyness on the 27th.

July was hot and thundery. The month opened with westerly winds, mainly overcast skies and with temperature slightly below the normal. After the 4th, the weather became fine and sunny with high day temperatures and warm nights. The 22nd and 23rd were the hottest days generally temperature at a large number of places exceeding 90°, the highest being 92° at Camden Square on the 13th. Although in London the maximum did not equal that of August, 1921, the maximum at Kew on the 22nd and 23rd (92°) was slightly higher than any previous July reading at the Observatory. Several records were established, among which may be mentioned 92° at Tenbury, the highest reading recorded during 23 years, 92° at Culmpton (Devon), and 89° at Falmouth, both of which are records. At Ipswich, the maximum exceeded 90° on 3 days, and 80° on 10 days.

During this spell of hot weather, the nights were remarkably warm. At Kew, from the 6th to the 16th, the night reading only once fell below 60° and throughout the night of the 12th-13th it never went below 68°. Both at Tavi stock and Lyme (Kent) the same high night reading was recorded for the month as a whole, and for each of the first three weeks, taken separately, the mean temperature was above the normal. The greatest excess was 4.0 in the eastern counties and the least, 1.5 in the north of Scotland and the Channel Islands.

The thunderstorms of the month occurred in three main groups. The first began on the night 6th-7th the line of storm progressing eastward over the kingdom reaching its greatest intensity in Scotland and the northern part of England. Bridges and railway embankments suffered considerable damage in the Cambridge district of Inverness shire on the afternoon of the 8th from what is popularly known as a 'cloud burst'. The second group began with the memorable all night storm which visited London and parts of Sussex on the night of the 9th-10th. The principal characteristic of this storm was the extraordinary frequency of the lightning which continued for a period of from 6 to 8 hours. A barometer at Chelsea recorded over 6,000 flashes in the 6 hours 10 p.m. 9th to 4 a.m. 10th. Between 11 p.m. and midnight the average number of flashes per minute was 26. Further storms occurred locally on the evening of the 10th. The third group which chiefly affected the west midlands and the south west of England, began on the 12th.

August, while warm and sunny locally, was on the whole rather cool and wet. Fine sunny weather marked the opening day of the month, but on the 2nd and 3rd there were heavy rains in Scotland and Ireland with high winds reaching to gale force on many parts of the Irish and Welsh coasts. After this, although unsettled conditions prevailed in the north and west of the British Isles, fine warm weather was experienced for nearly a fortnight in the south eastern part of England. At Kew from the morning of the 1st to the night of the 14th 15th, there was no measurable rain, while the sun shine amounts exceeded 20 hours almost every day during that period. Temperature rose well above the average reaching 80° or more on several occasions, but never attained the high temperature of July. On the 14th, a shallow depression developed over England causing thunderstorms and heavy rain locally at night. By the next day maximum temperature in the south fell about 10°. As illustrating the general character of the month in various parts of the country, it may be mentioned that at Aberdeen it was a cold wet, sunless month. At Cargen (Kilcubbin) it was the wettest and moosest disappointing experienced there. At Keswick it was the wettest August for 32 years and at Saleby (Lumberland) the wettest for 60 years. On the other hand, at Skegness it was a beautiful month the sunniest August on record. At Ipswich it was the sunniest since 1921. At Torquay fine warm weather continued without a break for nearly 3 weeks. The mean temperature of the month was generally below the average. The exceptions were the eastern counties of England and the Channel Islands. The highest temperature of the month was 90° at Camden Square, Canterbury, and Halstead (Essex), on the 9th, and the lowest, 31°, at Balmoral, on the 29th.

In Scotland and Ireland the maximum temperature never reached 80°

Rainfall was more than twice the normal over two small areas, one to the north of and including Inverness, and the other in the neighbourhood of the Solway Firth. A large part of the midlands and the south of England had less than the normal while elsewhere from 100 to 150 per cent of the normal was recorded. In the south west of Scotland generally it was the wettest August on record. During a sudden thunderstorm which occurred at Bexley Heath on the morning of the 24th, 0.40 in. of rain fell in 7 minutes. Falls of 2 ins. in the 24 hours occurred at several places in Cumberland and Wales. Thunder storms were somewhat frequent in the eastern counties of England. With the exception of the east of Scotland and the north west of England the amount of bright sunshine was above the average. The first half of the month was the brightest generally. During the week 5th-11th 83 per cent of the possible was recorded at Margate and 77 per cent at Worthing. At Ipswich 14 hours were registered on the 4th and the total for the first week was 146 hours. At Kew the amount during the first half of August constituted a record. On the 18th, a very large waterpout was seen from Brighton, about 2 miles out at sea.

September, though sunny was rather wet and cool. During the early part of the month fair warm and sunny weather prevailed generally in the southern parts of the British Isles. Comparatively high day temperatures were recorded and the amount of bright sunshine was in excess of the average. Although heavy rain fell at times in the northern and western parts of the Kingdom the weather experienced was an improvement on the rough and unsettled conditions which prevailed at the end of August. Towards the end of the second week the weather became unsettled over the whole country and strong winds blew on the western and southern coasts on the 11th and 12th. Thunderstorms developed locally about the 13th. On the 15th there came a decided fall in temperature and from thence to the end of the month the weather was cool. Snow was reported on the mountains of Scotland on the 20th. In many parts of the country the last day of the month was the warmest, and for the time of year the night temperature was unusually high. The general character of the month in different parts of the country is shown by the following details. At Arisaig (Inverness) it was an abnormally wet and

unsettled month. At Ullapool (Cromarty) it was cold and wet with snow down to the 200-ft line on the 20th and 21st. Dublin experienced a disappointing month with only three days of summer weather. At Rodsock Priory (Notts) during the first fortnight the weather allowed the bulk of the harvest to be secured in good condition, and although the next ten days were unsettled, with a good deal of rain, the amount of sunshine was exactly double that of the previous September. There were, however, rather more than the usual number of ground frosts. At Bude wild wet weather prevailed from the 16th 23rd, and the end of the month was warm and damp.

The mean temperature of the month was below the normal the greatest deficiency being nearly 2° in the east of Scotland and the Channel Islands, and the least rather more than half a degree in the east of England. The coldest period was from the 16th to the 22nd, and the warmest was the week ending on the 29th. A minimum of 64° during the night 29th-30th at Kew was the highest ever recorded at the observatory during the night in any previous September. The extreme readings of the month were highest in England and Wales 78° at Ascot on the 9th in Scotland 73° at Aberdeen, 74° at Edinburgh on the 30th and in Ireland 75° at Newcastle (Wicklow) on the 6th, and Dublin on the 29th. Lowest in England and Wales was 29° at Rhayader on the 3rd, in Scot and 27° at Eskdalemuir and West Linton also on the 3rd, and in Ireland 32° at Markree Castle (Sligo) on the 18th and Kilkenny and Dublin on the 24th. The lowest ground temperature was 18° on the 3rd at Rhayader.

With the exception of some portions of the eastern and south eastern coastal areas of Great Britain and Ireland the rainfall was above the average. In a few restricted areas more than double the normal amount was recorded, the largest areas being one which included parts of Argyllshire, Renfrew Ayr and the Clyde. In western and southern Scotland the month was the third wettest in succession, and at Rothesay (Bute) the period July to September was the wettest for at least 100 years. It was the wettest September at Greenock for at least 50 years. Speaking generally the first week of the month was the driest and the week 16th to 22nd the wettest. At a considerable number of places 1 inch or more was measured in 24 hours. Ben Lomond was capped with snow for the first time this season.

Storms and Floods in 1922-23

(1922) October. At the beginning of October the government of Bengal reported the whole country from Jaimaiganj to Santahar in the Bhogra district was flooded. The floods swept away all the cattle houses and foodstuffs. The number of people affected were about a million and a half and 1,500 square miles were inundated. Towards the end of October a storm swept the Coast of Brittany and destroyed the Mary Stuart Chapel at the old seaport of Roscoff. The chapel, which was reduced to a heap of ruins, was built in 1548.

November 4. Heavy floods at Naples caused landslides and the collapse of many buildings. Ten persons engaged in rescue work were killed by the fall of a wall. 20-23. Cape Breton Island was visited by the worst gale known in its

history. Miles of telegraph and telephone wires were blown down. 24. The Biskra Tuggurt (Algeria) railway was cut in five places by floods. On the track between Biskra and Tuggurt the floods formed a lake of 38 square miles.

December 10. During a violent snowstorm along the coast of Finland, the trawler *Celermo* was completely wrecked off the little island of Kornso outside Vardö. The vessel broke in two, and some of the parts were washed ashore. 22. On arrival at Cork the *Celtic* reported that heavy seas had damaged lifeboats, hatchways and deck fittings and had flooded the third class saloon. The *Carmama* from New York reported that the gale had caused the loss of a lifeboat and had smashed in one of the hatches. 25. The Captains of the *Cedric* and the *Zeeland*

on arrival at New York said they had encountered the worst storms they have known. 29. On the night of the 29th the Cunard freighter *Valencia* encountered a big sea which ripped free a hulk with a 150 fathoms of steel mooring cable hurled it into the sea which was at once flooded to a depth of 4 ft. Two men were killed and twelve severely injured. 31. The Seine was dangerously high and rose 6 in. in 2 hours. The lower valley of the Loire was flooded. The overflowing of the Nantes Brest Canal and the river Sèvre turned large areas of gardens and fields into lakes.

(1923) January 4. The valley between St. Mihiel and Verdun was under water owing to the rise of the Meuse. For several days previously all river traffic was suspended. 19. A cloud burst at Devils Kanter, washed away a railway bridge and stopped traffic between Johannesburg and Lourenço Marques. 20. Great storm along Belgian Coast. At Ostend the sea swept over the channel breakwaters and a considerable amount of damage was done. 21. At Gibraltar, in consequence of heavy rains, large boulders weighing 40 tons fell from the east side of the Rock on to the main road.

February 11. During a gale the German trawler *Waltershof* was sunk in the Gulf of Bergen, nine out of a crew of twelve were drowned. 14. Budapest water works were flooded on account of the Danube rising. Great difficulty was experienced in keeping the city supplied with water. During a violent storm the *Tuscan Prince* was wrecked on an island at the entrance to Barclay Sound, Vancouver. 25. The Zambezi was in high flood and 18 miles of the Central African Railway were under water. Thousands of natives were forced to leave their kraals. Two miles of line between Murrumbidgee and Kain were washed away.

March 4. The Seine was in flood, and the service of river steamers was suspended. The lower districts on the outskirts of Paris were under water. At Bordeaux 200 persons were rendered homeless owing to the flooding of the Garonne. 6. Six inches of snow fell in a terrific storm which raged over New York. Intense cold prevailed, the elevated railways being sheathed in ice. 12. A violent storm from the south west accompanied by rain and snow swept up the Mississippi Valley, leaving twenty-two persons dead in its track. 18. Ina of snow fell in Madison. At Pinson, Tennessee many persons were killed and injured, and about 50 dwellings wrecked. 19. Owing to violently heavy rains in Macedonia, Southern Serbia and Thessaly entire villages were swept away by the swollen rivers. Thousands of people were rendered homeless. Hundreds of people clung to the roofs of houses or sought refuge in trees where they were held prisoners by the floods. Whole herds of cattle and flocks of sheep were drowned. Much damage was caused by the river Varda, which rose from 10 to 22 feet above its normal level. 22. A blizzard, the most severe since 1888 swept Western and north western America. Milwaukee was buried in snow drifts 20 to 22 ft. deep. In many towns of Colorado the snow was said to be piled up against the houses as high as the second story windows. 23. Swollen by the melting of snow in the mountains of Kurdistan and heavy rains, the Tigris rose to an unprecedented height. 24. The flooded Tigris burst the river bank 27 miles north of Baghdad. 300 square miles of the desert were under water and Baghdad

became almost an island. 30. The White Star liner *Pittsburg* encountered two cone shaped waves, which broke over the fore deck and carried away the centre bridge. The quarter master who was at the wheel was thrust through a partition into the chart room.

April 4. A tornado 3 miles long and several hundred yards wide tore a path through Pineville, Louisiana killing 14 people. In Main Street the fronts of 20 houses were ripped off. In Cass County, Texas, several buildings were destroyed.

May 1. The Canadian Pacific Railway in New Brunswick was seriously affected by floods. The West and East Wellford tracks were under water. The dam which crosses the railway at Brownville Junction was carried away. This was the worst flood since 1887. A later account said that twenty bridges had been swept away. 8. Heavy rains caused the worst floods for over 50 years in the Canterbury and Marlborough districts of New Zealand. Bridges were destroyed, train services stopped and many towns isolated. 10. Violent hailstorms in Paris. A high wind accompanied the hail at Domfront, where the roofs of many houses were swept away, and in the surrounding country the roads were blocked by fallen trees. 14. A tornado caused great damage in Colorado City. It mowed a path 25 miles long across Mitchell County. About 50 persons were killed and great damage caused to crops. The health resort of Hot Springs, Arkansas suffered severely through a cloud burst which sent a wall of water 5 ft. high rushing through the main street. 23. The Ephraïm bus at several miles of the Bund 40 miles north west of Baghdad and caused about 45,000 acres of cultivated land to be inundated.

June 5. A storm of wind rain and lightning swept over New York City and its environs. Many houses were struck by lightning. A 10 room story building on Randall's Island was unroofed and on Riverside Drive many trees were torn up. Damage to buildings was estimated at £40,000. 11. The lowlands of Kansas, Oklahoma and Texas were flooded as the result of three days of continual rains. Several hundred people were rendered homeless. In Kansas every watercourse in the State overflowed its banks and enormous damage was done to wheat and crops. 25. The heat wave in New York was broken by a freakish storm which visited some parts of the city with great violence and never went near other parts. In Brooklyn during a 10 minutes storm a large number of houses were unroofed and flying debris were carried hundreds of feet. Nearly 500 trees were torn up and a brick wall, 40 ft. high and 200 ft. long, was blown down.

August 24. Disastrous tidal waves on the north-east coast of Korea carried away hundreds of houses, and did much damage to shipping. 26. During a severe thunderstorm at Lehigh the electric tramway cables became fused by lightning. At Pistola a house was set on fire. 29. On the 23rd the floods in Bihar were said to be the highest ever known. The embankment which protects Patna was breached in several places and water was flowing into the town. Thousands of cattle were carried down the Ganges. One third of the population of Arrah, and all the inhabitants of the surrounding villages were homeless.

September 20. Bombay City was flooded by torrential rains lasting for several hours. The tramway and suburban railway services were suspended and long lines of stranded motor cars were axle deep in water.

BRITISH ASSOCIATION—The ninety-first annual meeting of the British Association for the Advancement of Science was held at Liverpool on September 22-29. Sir Ernest Rutherford, who succeeded Sir Charles S. Sherrington as President, dwelt in his address on 'The Electrical Structure of Matter'. There was by no means the same certainty to day as a decade ago, he said, that the atoms of an element contained hidden stores of energy. For the first time in the history of the Association the President's address was broadcasted by wireless.

The following were the Presidents of the various sections:—A, Mathematics and Physics, Prof. I. C. McLenan; B, Chemistry, Prof. F. G. Donnan; C, Geology, Dr. Gertrude Elles; D, Zoology, Prof. J. H. Ashworth; E, Geography, Dr. Vaughan Cornish; F, Economic Science and Statistics, Mr. W. H. Beveridge; G, Engineering, Sir H. Fowler; H, Anthropology, Prof. P. E. Newberry; I, Physiology, Prof. G. H. F. Nuttall; J, Psychology, C. Burt; K, Botany, Mr. A. G. Tansley; L, Educational Science, Prof. T. P. Nunn; M, Agriculture, Dr. C. C. Cawthra.

Public lectures were given in Liverpool and the neighbouring towns as follows:—Professor A. S. Eldington, 'Relativity'; Dr. Johannes Schmidt, 'The Dana Expeditions and their work and the Life History of the Eel'; Sir William Pope, 'Colour Photography'; Mr. T. Bury, 'The Study of Life on the Roof of the New World'; Dr. F. A. F. Crew, 'The Riddle of Sex'; Prof. Seward, 'Greenland'; Prof. Pear, 'The Acquisition of Skill in Work and Play'; Major (T. W. I. Kay), 'X Rays and their Uses'; Prof. Roxby, 'Regional Survey'; Mr. K. Balfour Browne, 'Wild Bees and Wasps'; Sir John Russell, 'Soil and Crop Growth'; and Prof. H. H. Turner, 'The Size of a Star'.

In 1924 the Association will meet at Toronto under the Presidency of Sir David Bruce.

ATLANTIC BIRD RISING—A change of level in the bed of the Atlantic between Cape Town and St. Helena was reported by the Eastern Telegraph Company. One of their cable-laying ships found a depth of three quarters of a mile at a place where the chart showed a depth of three miles when the cable was laid in 1899. Changes of level of the ocean floor have often been brought to light by soundings, but the actual rise or fall is reckoned in a few feet or fathoms, and nothing of such a stupendous character as a change of more than two miles has ever been established by surveys.

BALLOONS ADRIFT—Mr. Henry Harries contributes to the Meteorological Magazine some remarkable facts concerning toy balloons sent up by Major MacLulich from Brighton during the summer of 1922. On August 23 two balloons were liberated together, and next morning they descended in the village of Marcel par Vitrey, Haute Saône, having travelled in company 225 miles. On September 22 two others started together in a dead calm, made a perpendicular ascent of about 2,000 feet, and within 22 hours dropped in the streets of Cassel, Germany, the distance being 365 miles and the rate 30 miles an hour. Numerous balloons were sent off on September 9, under well marked anticyclonic north wind conditions. No fewer than 43 of them were recovered within a small area in the north of France. They had attained an altitude where the wind was of gale force, one of the balloons, found 2½ hours after its despatch,

having covered 108 miles at more than 43 miles an hour. On September 12, the balloons were liberated in front of a cyclone approaching Brighton from the Midlands. Of these 15 were drawn into the cyclone and descended in various places in Kent, Essex, Suffolk, Bucks, and Berks—the greater part of the circuit of the cyclone. The other five were caught in a westerly, veering north westerly current, which carried them to north eastern France. One dropped at St. Ouen, Paris, 226 miles distant from another which descended at Hatcham Park, Stowe Bucks.

BALUCHITERIUM OSBORN—Professor H. F. Osborn has constructed, from the bones found in or many years search, an immense prehistoric animal called the 'Baluchiterium Osborni'. The animal was about 3½ ft. long and measured 1½ ft. to 1 ft. in height. In 1910 the bones of an unknown extinct animal were found in the Eocene deposits in Baluchistan and more recently Borisliak, a Russian palaeontologist, found the remains of a similar large animal in Turkestan, but could not get the skull. An American expedition found a complete skull 5½ ft. long and with this and the other relics Professor Osborn was able to reconstruct this curious Asian monster of the past. Its limbs were as large as those of an elephant, but the feet were different, and the waist was three times as high. It had a horse-like neck and a small head and is believed to have fed on the leaves of trees.

BLACK CURRANT 'PIG BUD'—Experiments have been made at the Crichton Royal Institute, Dumfries, to discover a remedy for 'pig bud', a disease caused by a gall mite which destroys black currant bushes. Over 400 bushes were chosen and the ground around was covered with straw and dead branches, which were then set on fire. The scorched branches of the bushes were then cut off to within six inches of the ground, fresh straw was put on and then burnt away. It is claimed that by this treatment less than ten per cent of the bushes have been lost through disease and that the remainder have made a good recovery, with every promise of a healthy crop.

BOILER AT 1,500 LB. PRESSURE—I. V. Blomquist, a Swedish engineer, has invented the 'Atmos' boiler which is said to be capable of working at a pressure of 1,500 lb. It consists of eight revolving tubes side by side in a furnace, 12 ft. 2 in. of the length being exposed to the flames, whilst the outside diameter is 1 ft. and the walls ¾ in. thick. The tubes make 330 revolutions per minute and the boiler will work at 1,500 lb. pressure and 700 deg. F. steam temperature (100 deg. superheat) being supplied with feed water by a centrifugal pump at 150 lb. pressure. Two boilers of this kind, evaporating 16,500 lb. of steam per hour were in use at the Carnegie Sugar Refining Company, Gothenburg, Sweden, for twelve months and are stated to give little or no trouble. The special feature of the design—the revolving tubes—is to enable the centrifugal force to press the water inside the tubes definitely against the metal surfaces and at the same time to enable the bubbles of steam to escape more freely through a central tube.

CHEVET TUNNEL REMOVAL—A double-line widening scheme has been put in hand on a portion of the London Midland and Scottish Railway in the neighbourhood of Northampton. The total length of the widening projected will

be three and three quarter miles, and it affects the line between Chevet Junction and Snydale Junction. The scheme starts at Chevet Junction, opposite Haw Park Wood, and involves the opening out or removal of the Chevet Tunnel, over 700 yards long. The demolition of this tunnel, cut out of solid rock, will be a costly and difficult undertaking. The rail level is 90 ft below the surface and at present it carries a double track. When the scheme is completed the line will carry four tracks, and an awkward "bottle neck" which has been a serious hindrance to passengers and goods trains, will be removed.

DECIPHERING CHARRED DOCUMENTS — Mr Raymond Davis, of the Bureau of Standards, Washington, has discovered that the written and printed matter of papers that have been thoroughly charred as by being heated in an iron box or safe may be deciphered by placing the charred sheet in contact with a fast or medium plate for a week or two in the dark and then developing as usual. An emanation seems to affect the plate except where the charred ink acts as a protective coating. Films need a much longer contact than plates, and sometimes the effect is reversed unless the film is previously washed and dried.

FAILING OF COLOURS — Many colours fade when exposed to strong sunlight, but the relative injuriousness of diffused daylight and artificial illuminants is not thoroughly understood. The subject was discussed by Sir Sidney Harmer, Director of the Natural History Department of the British Museum, in a paper read before the Royal Society of Arts. He stated that experiments by Dr Russell and Sir William Abney led to the conclusion that (1) fading is due to the action of light and not to moderate heat, (2) it does not take place in the absence of oxygen and moisture, and (3) the rays of the violet end of the spectrum produce the greatest amount of fading. From experiments with various gasses devised to check the transmission of ultra violet rays it appears that in general the use of tinted glasses merely delays fading and does not prevent it, in the case of fugitive colours. The best glass for the purpose had a distinct yellow coloration rendering its use for cases scarcely practicable. The wings of certain moths showed appreciable fading in 10-25 days, on the other hand the fur of the tiger required 175 days, and of a brown horse and antelope 1,425 days, before there was perceptible change of colour. Direct sunlight was found to be about 20 to 70 times as injurious as electric light and diffused daylight about six times as injurious. There seems little doubt that illumination by electric light is less liable to cause fading than natural light. Most artificial illuminants contain less ultra violet energy than daylight.

FATIGUE IN LAUNDRY WORK — Miss May Smith has undertaken an investigation into fatigue in laundry work on behalf of the Industrial Fatigue Research Board. She finds that there is a reduction in efficiency towards the end of the day which tends to be greater during a ten hour day than a nine hour day. There is also clear evidence of the beneficial effects on efficiency which occur after a fifteen minutes rest pause in the morning spell, but the greatest influence on the laundresses' output appears to be due to the vast individual differences in the workers' efficiency. Apparently the atmospheric

conditions of laundries compare very unfavourably with those in potters' shops, boot and shoe factories, and cotton weaving sheds. Miss Smith believes that laundry work, when conducted under good conditions, is not detrimental to the health of the workers.

FIRE PISTONS AMONG THE MALAYS — Mr Ivor Evans has published a description of the fire pistons used for the production of fire among the Shans and people of Pegu in Burma, and among certain tribes in the Malay Peninsula. The fire pistons are made of buffalo horn, wood, and tin. The important part is the binding of a rag near the distal end of the piston, which acts as a washer and prevents the escape of air. This rag must be so adjusted that it allows the piston to pass smoothly down the cylinder when the piston head is struck sharply with the palm of the hand, and it must not be so tight that there is difficulty in withdrawing, the piston fairly quickly, nor so loose that air can escape from within.

FOREST MURMURS — Professor W J Humphreys, in his presidential address to the Washington Academy of Sciences gave some interesting particulars of the murmur of the forest and the roar of the mountain, based on observations in the Gap Mills Valley, Monroe County, West Virginia. Occasionally there are strong winds blowing simultaneously up both sides of a high mountain ridge, and it is asserted that when there is an appreciable wind from the mountain there is often a lighter wind blowing in the opposite direction up portions of the mountain itself. With tempest winds the conditions are said to be much like the Helm Wind along the western side of the Pennines. Tree and forest sounds are said to be due, not to the elasticity of the twigs and branches, but as in the case of the singing telegraph wires, to the instability of the vortex sheets which their obstruction introduces into the air as it rushes past. The pitch of theolian murmur of a forest is said to be essentially that of the average twig, and though the note of the twig may be inaudible at close quarters the forest may often be heard miles away.

GREATEST CABLE IN THE WORLD — The greatest cable in the world has been laid between Weston super Mare and Far Rockaway, Long Island, thus establishing the sixth complete cable circuit between the United States and Europe for the commercial cable company. In the construction of this new cable the largest ever manufactured for deep-sea operation, more than 4,000,000 lb of copper, 1,800,000 lb of gutta-percha, and 80,000 miles of iron and steel wires (more than enough to go three times round the earth) of various sizes were used. The cable is capable of transmitting 1,200 letters per minute, 600 in each direction simultaneously, a capacity nearly twice that of any other long cable now in operation anywhere. The conductor of the main sections weighs 1,200 lb per nautical mile, which is 50 per cent more than the heaviest hitherto used. The deep sea portion of the cable will not be much more than 1½ in diameter, and, contrary to common belief, it will everywhere sink down to the ooze at the bottom of the sea, to lie there in the darkness and stillness, from two to three miles below the surface.

GYPSIES IN TURKEY — In the Journal of the Gypsy Lore Society Mr W. E. Halliday gives an account of gypsies in Turkey, collected from a

wide range of literature. It is estimated that there are 800,000 of these people in modern Turkey but the figure cannot be verified. The strict Osmanli hates them as infidels and dreads them as magicians, and the Christian view of the gypsies' irreligion and genial roguery is illustrated from the folk tales. Their thievish habit and way of life have naturally made them unpopular, and it is widely believed in Turkey that they dig up corpses, a belief probably based on their habit of eating carrion. It is also stated that they drink annually a secret potion, the composition of which is known only to the oldest and wisest of the tribe, which secures immunity from snake bite. Their employment as bear leaders is reflected in the dislike of black and brown bears.

HUDSON RIVER TUNNELS—Remarkable progress is being made in the construction of the twin tunnels under the Hudson River which are intended to unite New York and New Jersey, and be capable of accommodating 45,000 vehicles a day or more than twice the volume of traffic now served by the New York ferries. The tunnels will be two miles long. In each of them there will be a 20 ft roadway for a double line of one-way vehicles and a side walk for pedestrians. Each tube will be divided internally into three horizontal planes with the object of providing adequate ventilation for the expulsion of the deadly carbon monoxide gas from the motor cars in the tunnels. The lowest plane will be filled with fresh air driven in at the rate of 3,600,000 cubic ft. per minute. Air ducts at frequent intervals will admit the air to the central plane which forms the roadway and powerful fans will draw the foul air upwards and outwards and through the plane in the roof. It is estimated that by this plan the entire air in the tunnel will be changed every 90 seconds.

HUMAN HAIR HYGROMETER—An improved hygrometer, which represents at a glance the percentage of moisture in the air, has been invented by Messrs. Negretti and Zambias. In order to indicate changes of moisture Sanssouire employed a hair which became longer when moist and shorter when dry. Twelve or more hairs form the basis of Messrs. Negretti and Zambias' new instrument. Human hair is specially selected and scientifically treated. The hairs are anchored by their lower ends and the upper ends are connected to a link which operates on a lever attached to the pointer spindle. The dial is graduated from 20 to 100 in percentage relative humidity. Readjustment of the instrument is quite simple. On the lower part of the dial is a scale to ascertain the dew point if required. The instrument is said to be of especial value in many industrial processes, and various types are manufactured depending on the requisite conditions. A large type of the same instrument combined with a dew point hygrometer has also been devised.

INDUS BARRAGE—After a discussion which has lasted on and off for seventy years the Government of India has sanctioned the construction of an irrigation barrage across the Indus at the Sukkar gorge. The scheme dwarfs all previous projects in the country. It is estimated to cost £12,300,000, or nearly twice the actual cost of the great triple canal project in the Punjab. The width of the waterway for which the Sukkar barrage has been designed is

3,950 ft., compared with 2,835 ft. for the Asutut Dam in Egypt, while the area affected exceeds the total cultivable area of Upper and Lower Egypt. After 20 years the area irrigated will amount to 5,300,000 acres.

LIGHTING AND INDUSTRIAL OUTPUT—Mr. Leon Gaster, in a lecture on industrial lighting and the prevention of accidents, before the Royal Society of Arts, showed that industrial fatigue, ill health, spoiled work, and diminished output were the result of unsatisfactory lighting in factories and workshops. In the cotton, fine linen and silk industries it had been found that the output was 5 to 12 per cent. less by artificial light than by daylight. An investigation by the National Institute of Industrial Psychology, showed that by using a lamp giving four times the light of an ordinary mercury lamp the amount of coal produced was increased by more than 14 per cent.

MAN'S ERECT POSTURE—Sir Arthur Keith, in his Hunterian lecture on the evolution and disorders of man's posture, pointed out that extinct forms of man show that the upright carriage of the head was evolved later than the human form of the lower limb of which the origin must be sought in Miocene or possibly Eocene times. In the Miocene phase of evolution the gibbon was differentiated from its cousins the Old World and New World monkeys, by postural adaptations of bones and muscles which made it orthograde and human in type as opposed to the pronograde monkeys. This change probably took place towards the end of the Eocene period. The troglodytic phase was represented by the great anthropoid apes, evolved from the small anthropoids, probably in pre-Miocene times. In the pliant phase, structural changes were confined almost entirely to the lower limbs. As man shares so many characters in common with the great anthropoid apes, Sir Arthur Keith holds that he must be regarded as one of several aberrant branches of one great stem which he is to break up into the various fossil and living forms at the beginning of the Miocene or the end of the Oligocene period.

MARBLE MAY BE OF AQUEOUS ORIGIN—Dr. M. Copps has conducted a number of experiments with the object of showing that marble may have had an aqueous origin. He heated a quantity of solid calcium chloride and hydrated sodium carbonate in an autoclave at 300 degrees at a pressure of 24 atmospheres for eight hours, and a compact mass of marble, capable of taking a high polish, was formed. When sodium sulphate was used with calcium chloride a compact mass of alabaster was produced.

MINERS' VOCAL SAFETY LAMP—The latest device for insuring safety in coalmines is a lamp which indicates by a clear musical note when the air is more than a per cent. of fire damp present. The note, which is based on simple harmonics, rises in pitch and intensity in proportion to the quantity of fire damp present. It thus provides miners for the first time with an audible signal of danger.

MOSQUITO BREEDING UNDER CONTROL—A new method of controlling the breeding of malaria mosquitoes has been adopted in the lower valley of the Mississippi, where the shallow streams of the delta, with their abundant

vegetation, are favourable to these pests. Drainage is impossible, and a trial was made of clearing a section of the streams and impounding the water so as to convert a marsh into a lake. The value of this method is that all vegetation is first cleared away, and provision is made for a high permanent level of water and the maintenance of a clear margin. The experiment so far has given good results.

MOUNTAINEERING AT HIGH ALTITUDES—Mr G I Finch, a member of the Mount Everest Expedition, discusses in the *Geographical Journal* the question of mountaineering at high altitudes. He found that up to 22,000 feet the climber's physical functions were unimpaired and good sleep and recuperation from fatigue were possible. Above 23,000 feet sleep was fitful, appetite fell off, and there was a loss of physical fitness. The conclusion is that at, say, 22,000 feet acclimatisation to altitude ceases, and above that height oxygen should be used, at first in small doses and from 25,500 feet in larger doses, but the dose must depend on the nature of the ground. Oxygen increases the appetite and due provision must be made for this. At though greater heights than 26,500 feet were reached without the use of oxygen Mr Finch thinks this procedure unwise and believes that above the acclimatisation level a man must become steadily weaker and unable to recover from fatigue unless he makes use of oxygen.

MUSIC TYPEWRITER—Signor Fortoni, an Italian conductor who has been resident in London for many years has invented a typewriter which enables music to be typed in the same way as ordinary letters. It follows the main lines of an ordinary typewriter in that it is worked by keys moving levers on the ends of which are the types. The music sheet is held upright and flat against a steel plate at the back of the machine. Of the 40 levers, 35 carry six types each, and the remaining five three each. At the front of the machine is a curved dummy piano keyboard of 32 notes. A movable pointer can be shifted to any one of these 32 positions. On the right side of the machine is a lever which can be altered to five different positions. Thus the combination of these with the 225 types gives over 7,000 signs. Included in the types are the ordinary alphabetical capital and small letters so that the words of a song, musical directions, etc., can all be written with the one machine. More remarkable still seems the fact that a piece of music can be mechanically and accurately transposed from one key to another.

NEVER STOP RAILWAY—A demonstration of the "never stop" railway system, as it is called has been made at Southend over a line 300 yards long. The idea of the invention is remarkably simple. The travelling cars are like the nut on a screw. A nut rotated on a screw with a coarse thread travels quickly and if the thread is fine slowly. In the "Never Stop" system each car is like a nut travelling on a screw which rotates under the track. At stations the pitch of the screw is fine between them it is coarse. Between stations the cars travel eight times as fast as at the station. Thus if the speed in the station is two miles elsewhere it is sixteen. No brakes, signals, drivers or conductors are needed. The new system can be applied to overhead railways, in the central area of big cities, where tube, subway, or elevated electric trains are impracticable and where

buses and tramcars are inconvenient. In order to make the test at Southend additionally stringent, a gradient of 1 in 30 was introduced, and there were two loops of only three feet radius. There were 24 cars, each seating 8 passengers, with room for four standing. At a speed of only 16 miles an hour, the railway will be able to deal with ten or twelve thousand seated passengers in that time. The "Never stop" system has been applied to the City of Paris for installation in subways under the boulevards.

NEW RACE TYPE?—Mr A J Pape in a paper read before the Anthropological Section of the British Association at Liverpool, asked the question, "Is there a new race type?" He suggested that there were medical, mathematical and educational evidences of such a type. The characteristic marks included a distinct increase of cranial development above the ossification of the parietal and frontal bones, hair fine in texture and skin fine grained and thin. The eyes were specially luminous and intelligent looking, the eyebrows were rather prominent, the tips of face somewhat triangular but not sharp, and the general physiology of the body was harmonious. The psychology manifested itself in rapid response to sympathy pity in suffering power to comprehend principles easily, quick intuitions, thoroughness, and sensitiveness. There was a distaste for meat and coarse foods, but not a large appetite along any lines.

OTIRA TUNNEL—The opening of the Otira Tunnel in August 1923 completed the railway connection between the east and west coasts of the South Island of New Zealand. It pierces the Southern Alps at Arthur's Pass for 5½ miles and replaces a picturesque but dangerous coach route. The tunnel has a grade of 1 in 33, and is officially stated to be the seventh largest tunnel in the world and the longest in the British Empire. The Simplon is 12½ miles long and the Severn Tunnel 4 miles 624 yds. The Otira Tunnel which has been fifteen years in construction and has cost more than £1,000,000, will mean a great deal for Canterbury, which will be able to get west coast timber and coal direct by rail instead of by a long sea voyage.

PHEASANTS WARNING OF EARTHQUAKES.—There does not seem much connection between earthquakes and pheasants but Professor Umari of Japan has been able to show that these birds are peculiarly sensitive to slight tremors, and in many cases they gave notice of a coming shock. Thus observations were made on pheasants living in a neighbouring park during the quiet hours of the night. In three years he recorded 22 cases of the disturbance of pheasants. In half the cases observed the movement was noticed by the birds more readily than by a trained observer. On seven occasions the birds crowded before the tremor was felt, on five occasions at the same time, and on five after wards. In four cases they crowded while no tremor was felt, though slight movements were marked on the seismograph. In one case only did an earthquake take place without the accompaniment of crowing by the birds.

PORTRAITS BROADCAST BY WIRELESS TELEPHONY—On Empire Day, 1923, Dr Fournier d'Albe was successful in the first attempt to broadcast a picture by wireless telephony. The picture chosen was a portrait of the King. It was "coded" by dividing it into thirty horizontal

strips, each of which was split up into twenty squares. A letter was assigned to each square to indicate its average shading, and these letters were written out in thirty lines of twenty letters each. Each line was divided into four groups of five letters, and each group was dictated into the microphone in turn. The lines were numbered. The total time of transmission, with instructions, was twenty-two minutes, but the code message itself was taken down in eight minutes. The picture was reproduced either by graduated dots on squared paper or on an ordinary typewriter, using letters of graduated size and making the line space equal to the letter space. Recognisable reproductions were made in from twenty to twenty-five minutes.

POSTAGE STAMPS MAY BE ABOLISHED—The Pitney Bowes Postage Meter threatens to abolish adhesive or embossed postage stamps on letters, circulars or postcards. It has been set up in Manchester where it is intended to facilitate the postal arrangements of big business houses, by enabling the correspondence to be sent direct to the sorting department at the Post Office. The meter seals and stamps simultaneously any ordinary sized envelope at the rate of 250 to 300 a minute. The postage imprint is a combination of postage stamp, cancellation and postmark. A firm using it pays for a certain number of impressions, the meter is set and the registers on it indicate the amount of postage used. Thus the postage account of the firm is safeguarded against pilfering, whilst much of the labour of sealing and stamping letters and circulars is abolished. It is mechanically impossible to waste postage, as the meter fails to record unless an impression be made.

RADIO TELEPHONES IN EXPRESS TRAINS—In the United States and in France successful efforts have been made to instal complete radio telephone sets in express trains. In the fast express trains between Hoboken and Buffalo passengers could continue conversation with their friends which were interrupted by the train starting and they could also receive radio telegrams while the train was in motion. Experiments were also carried out by three French railway companies in making concert cars. On the Paris-Orléans railway, the experimental saloon cars had two loud speaking telephones fitted at each end. Up to a distance of 200 miles from Paris, the Eiffel tower concerts were heard quite satisfactorily. As a rule the concerts were better heard than the news items. When the train went through deep cuttings the sound was notably reduced, and when going through long tunnels it almost disappeared. It was found that the large radio telegraphic stations near the Bordeaux-Paris line produced serious disturbances. When going round curves also discordant sounds were heard, due to the friction of the flanges of the wheels on the rails.

RADIUM IN KATANGA—Mr H. E. Bishop of Science gives an interesting account of the discovery of a rich deposit of radium near Rillabothville, in Katanga, during prospecting work by a Belgium Corporation. This was in 1913. Then the war broke out but the secret of the find was so well kept that nothing was known by the outside world until a large plant for radium extraction had been built at Oolen in Belgium. In spite of the fact that the ore is transported 2000 miles down the Congo, across

the ocean to Antwerp, and then by rail to Oolen, its richness allowed of radium preparations being put on the market in 1922 at a considerably lower figure than that at which it has been maintained for some years by the American companies. As a result of conferences between the representatives of the American companies and the Belgian, a joint selling organisation was formed.

SAXON BURIAL GROUNDS—Professor F. G. Parsons has described the result of the exploration he has made of Saxon burial grounds at Margate, Mitcham, and Bedford on Avon. At Margate the dead were found buried in regular rows, as in a modern cemetery, a habit the Jutes brought with them from the continent, where the so-called "row graves" have been long recognised in North West Germany. The Jutes burials may be always recognised from the presence of an earthenware bottle, usually near the face of the dead. It possibly contained mead for the refreshment of the ghost. From the arms and other adornments it is considered that at Mitcham and Bedford on Avon the sights were occupied by pagan Saxons, long-headed, long-faced members of the Nordic race, though every now and then a broad head of Mid-European origin turns up, a sign that the Angles, Saxons, and Jutes were not an altogether pure race. The average height was 5 ft 6 in. The state of the teeth show that the food consisted largely of grain roughly ground by soft stones. They suffered from chronic rheumatism and the injuries to the head often indicate the adventurous life they led. Most of the men died before the age of forty.

SHEEP TRACKS ON GRASSY SLOPES—Dr. Hilmar Odum, of the Danish Geological Survey, has made a study in the Faeroe Islands and in Denmark of the close set grassy ridges running parallel on the surface of a bank, which are popularly supposed to be due to the traffic of sheep. He has found that the formation of the ridges, which he names "terracettes," originates in a settling of the loose earth on an unstable slope into a position of greater stability. A series of horizontal cracks appear at first in the turf cover of a steep slope, then the narrow turf section between two cracks sinks slightly, tinning, at the same time about a horizontal axis so that its surface comes to rest at an inclination rather less steep than that of the slope as a whole. The ridges, once begun, increase in definiteness, owing to the filtering out by the grassy coating and final settling of soil particles washed down by rain. The whole process is entirely a geological phenomenon.

SMOKE PLAGUE AT KEW—The Director of the Royal Botanic Gardens at Kew has called attention once more to the harmful results that may follow from the lack of control of smoke production in industrial suburbs. The heavy deposits of soot borne by the evergreens are clear indications of atmospheric contamination which will markedly lower the vitality of the plants in the Gardens, and in some cases may actually prevent their successful cultivation. At present the greatest damage arises at Kew from the deposits of dark-coloured tarry material upon the leaf surfaces cutting down the supply of light which reaches them and clogging the pores through which are carried on gas exchanges vital to their healthy existence. Apparently the atmospheric pollution at Kew can

be traced in the main to the industrial area on the opposite side of the Thames

STEERING A SHIP BY EAR.—Mr. Loth, a French engineer, has invented an electric pilot cable which provides for the safe navigation of ships through intricate channels by means of an electric cable sunk in the fairway. On the bridge of ships supplied with the electric pilot is a receiving apparatus very much like an ordinary telephone or wireless receiver supplied with head clip microphones for the use of the navigating officer. By listening to the various tones in the receiver he is able to hold the ship on an accurate course immediately above the live cable sunk in the fairway. The apparatus is unaffected by fog or heavy seas, is extraordinarily simple and demands no specialist training for its use. All that is required is to hold the ship on a course in which the sound waves emanating from the sunk cable are heard at their most distinct pitch in the receivers. Experiments at the Norwegian naval station at Horten in the Christiania Fjord showed that the apparatus was most successful.

TATTOOING.—Mr. W. G. Handy has published an elaborate monograph on tattooing as formerly practised in the Marquesas. He made a study of about 125 cases of the older generation and found that the designs were marked by considerable artistic taste. The operation was said to have been very painful in each case and local inflammation followed by fever or swellings invariably persisted for eight or ten days. Mr. Handy was unable to discover how far the tattooing was supposed to possess a magical significance but in one case a woman had been tattooed to protect her from evil spirits. In its last day the art was purely decorative.

TEACHING THE MINER TO USE HIS PICK.—Mr. Adams and Mr. Stephenson of the University of Manchester, have spent twelve months in an investigation of the most scientific method of using a pick in a coal mine. To do this they lived the life and worked the hours of the miner. As a result the wielding of the pick has been rendered more continuous and rhythmic and a larger output of coal secured with less fatigue to the miner. The effects of better lighting and the more orderly arrangement of work so that less shovelling had to be done were also investigated.

TELEPHONING BETWEEN AMERICA AND GREAT BRITAIN.—The first telephone conversation between the United States and Great Britain took place in the early hours of the morning of January 15, 1923. Mr. H. B. Thayer, president of the American Telephone and Telegraph Company, from his office in Broadway, New York, succeeded in addressing a party of Press representatives and others at the New Southgate works of the Western Electric Company. Communication was maintained for two hours. The demonstration was carried out by the American Telephone and Telegraph Company and the Radio Corporation of America, which had installed a transmitting apparatus at Rocky Mount, Long Island. The transmitter was connected with New York by telephone wires. At New Southgate a special receiving set with

eight valves was employed, with an indoor frame aerial about six feet square. Most of the words spoken by Mr. Thayer and others were heard both by means of head telephones and also by a loud speaker so clearly that it was possible to recognise one of the speakers by his intonation.

TIME AND SOMNAMBULISM.—Mr. Sidney Hooper has published in the "Proceedings of the Society for Psychical Research" an account of his experiments in the appreciation of time by somnambules. Hypnotic subjects it is stated, have supernormal power in appreciating the passage of the hours. If one of them is told during hypnosis to do a certain act at the end of 1000 minutes he will do it at or near the exact time although he may have had no conscious knowledge of the suggestion. How does he come to know the time when the suggested act should be performed? Mr. Hooper's experiments suggest that when a long time interval is given in minutes the subject usually calculates subliminally so as to find out when the suggested act falls due. One of his subjects maintained that as soon as the suggestion was given she began to count rhythmically and continued to do so until the appointed moment.

VAAL RIVER BARRAGE.—On July 27, 1923, Prince Arthur of Connaught opened the barrage across the Vaal River which has taken six years to build and is the largest structure of its kind in South Africa. It has been constructed to meet the demand of the Rand gold mines for a continuous water supply. The Vaal River is checked near Vereeniging to form a lake 40 miles in length with a surface area of 64 square miles and containing 12,500,000,000 gallons of water. The intake is at Vereeniging whence the water is pumped to Zwartkops before it travels to Johannesburg through its 54 miles of pipes. An idea of the magnitude of the task can be gained from the fact that there are 36 sluice gates in the barrage, each 75 ft. high and 32 ft. 6 in. wide. There are 35 piers each 8 ft. thick and 34 ft. 6 in. in height, with a length of 55 ft. from the foundations.

ROYAL SOCIETY MEDALLISTS

THE King has approved of the following awards this year by the President and Council of the Royal Society—

A *Royal Medal* to Sir Napier Shaw, F.R.S., for his researches in meteorological science.

A *Royal Medal* to Professor J. Martin, F.R.S., for his researches on animal metabolism.

The following awards have also been made by the President and Council—

The *Copley Medal* to Professor H. Lamb, F.R.S., for his researches in mathematical physics.

The *Davy Medal* to Professor H. B. Baker, F.R.S., for his researches on the complete drying of gases and liquids.

The *Hughes Medal* to Professor R. A. Millikan, for his determination of the electronic charge and of other physical constants.

AN exhibition of objects of decorative art in part selected by the Royal Academy, was opened at Burlington House at the beginning of the year. The Academy portion included contributions from many eminent sculptors, architects and painters, and one gallery was devoted to the exhibition of cartoons and drawings by Alfred Stevens. Most of the latter were the works purchased in the preceding year under the terms of the Chantrey Bequest, the others were lent by Sir George Holford. The exhibition at Burlington House also contained an Arts and Crafts section which filled five of the galleries and was arranged by the Arts and Crafts Exhibition Society.

To the Selecting Committee for the Summer Exhibition many more works were submitted than in 1922 though the number was still far short of that reached in some of the previous years. The Committee that judged them consisted of the President Sir Aston Webb, Sir H. Hughes Stanton, Sir J. J. Burnet and Sir F. Short and Messrs. Olsson, Jack Shannon, Pegrum Scott, Clausen Russell and Poole. The Hanging Committee for oils and watercolours was composed of Sir H. Hughes Stanton and Messrs. Olsson, Jack Shannon, Clausen and Russell; the works in black and white were arranged by Sir Frank Short; the architectural designs by Mr. Scott; and the sculpture by Messrs. Pegrum and Poole.

Only two works were bought for the Chantrey collection. One was the well known portrait of Phil May in a red hunting coat painted many years ago by Sir James Shannon; the other "The Road Winter Morning," by Mr. George Clausen. A thousand guineas was paid for the Shannon and a hundred and fifty guineas for the Clausen. Sales at the exhibition were less satisfactory than usual although better than might have been expected considering the depressed state of trade. The principal works sold included "Pastoral" (£500) and "Kensington Gardens" (£262 10s) both by Mr. Philip Colnard; "The Hospice" (£250) by Mr. Sydney Lee; "Interior" (£250) by Mr. A. van Amrooy; "Sunrise in May the Willows" (£262 10s) and "Tilly Church" (£300) by Mr. George Clausen; "A Provençal Town" (£250) by Mr. H. H. La Thangue; "The Watch Tower" (£252) by Mr. Arnesby Brown; "Early Mornin'" Les Baux Provence" (£300) by Sir Herbert Hughes Stanton; "La Scala" (£126) by Mr. Horace Fisher; "Hamstead Heath" (£150) by Miss Laura Knight; "The Captive" (£210) by Mr. P. A. Hay; "The Heart of Suffolk" (£315) by Mr. Bertram Priestman; "The Saint and a Sinner" (£150) by Miss Madeline Green; "A Peaceful Vale" (£315) by Mr. Fred Wilner; "Romance d'autre fois" (£550) by Mr. Virgil Constantin; "Memories, Hopes and Fancies" (£315) by Mr. Gunning King; "Suzanne" (£157 10s) by Miss A. MacKitchie; "The Maker of Dreams" (£205) by Mr. Frank O. Salisbury; "Papillons" (£126) by Mr. Walter E. Webster; "Priscilla" (£126) by Mr. L. Campbell Taylor; "Love and Riches" (£262 10s) by Mr. G. A. Pownall; "Mist rising in the Valley of the Crouch" (£100) by Miss Alice Fanner; "Sybil of the Gold Coast, bust" (£150) by Mr. E. Whitney Smith; and "Winged Joy group" (£500) by Mr. Henry Pegrum. Among the unpriced works marked sold were "Gossip on the Road," by Mr. Clausen; "A Storm is Coming," by Mr. W. L. Wyllie; "The Rose Walk" and

"A Blizzard," by Mr. Joseph Farquhaeson; "Red haired Girl" by Mr. James McBeay; "Angry Waters," by the late B. W. Leader. In October exhibitions were opened in the Royal Academy's galleries of Australian art and primitive English paintings.

The most important addition to the National Gallery was the group of portraits of members of the Wertheimer family, painted by Mr. Sargent. The portraits were painted for Mr. Asher Wertheimer, the picture dealer, who when he died in 1922, bequeathed them to the National Gallery subject to the life interest of his wife. Mrs. Wertheimer died in December 1922 and in the Spring of 1923 the Sargents nine in number and all representations of the donor or his family were on view at Trafalgar Square. They were hung together in one of the small galleries and attracted an unusual amount of attention. By the death of Mrs. Ludwig Mond in May, 1923, the National Gallery became entitled on certain conditions to the large collection of paintings by early Italian masters formed by the late Dr. Ludwig Mond who was advised principally in their selection by Dr. Richter. One of the conditions attached to the bequest is that the pictures are to be hung together in rooms set apart for them. Should it be necessary to build new rooms Dr. Mond's trustees are authorized to provide the funds.

Several pictures in addition to the Sargents were placed on view during the year among them the portraits of Gainsborough's two daughters, Mary and Margaret painted on one canvas when the artist was living at Ipswich. This group is one of the Gainsborough family pictures and was sold at Christie's in May by the widow of one of Gainsborough's descendants. It was bought by Messrs. Knoedler from whom it was acquired by the National Gallery. Other pictures hung for the first time included a small portrait by Corot of a man on a grey horse, a portrait of Lady Emilia Kerr by Romney, a flower piece by Fantin Latour, a portrait of an Italian gentleman by Richard Wilson, and a portrait by Rubens of the Archduke Albert, bequeathed by Mr. Richard Jackson.

At the National Gallery of British Art an exhibition of examples of book illustration of the Sixties was followed by one of the works of Pre-Raphaelite painters of about the same period and containing pictures by Millais, Rossetti, Madox Brown, Burne Jones, Holman Hunt, Brett and others. In the summer a generous offer was made by Mr. Samuel Courtauld to the Trustees and accepted by them. Mr. Courtauld placed in the hands of trustees (the Directors of the National Gallery and the National Gallery of British Art, Lord Henry Bentinck, Sir Michael Sadler and Mr. Samuel Courtauld) the sum of £50,000 for the purchase of French pictures of certain schools, to be shown in the Foreign Gallery that is now in course of erection. An exhibition of industrial art was opened at the Victoria and Albert Museum where the Alfred William Hearn Collection of objects of art, presented by Mrs. A. W. Hearn, was placed on view in the autumn. Watercolours by J. R. Cozens and Thomas Girtin were shown at the British Museum, and in spite of the already congested state of the National Portrait Gallery the Director managed somehow to find room to

exhibit a number of newly-acquired paintings and drawings.

The bicentenary of the birth of Sir Joshua Reynolds (July 16 1723) was celebrated by the Royal Academy by a reception at Burlington House, at which speeches were made by Sir Aston Webb, Mr J S Sargent R.A. Mr Charles Sims, R.A. and Lord Crawford, and a small exhibition of Reynolds pictures and relics was arranged in the galleries. The year was remarkable for the number of exhibitions of nineteenth century French art. The first held at the Leicester Galleries, was composed of works in sculpture by the painter Degas. A valuable exhibition, it was followed in May by one of French paintings at Messrs Agnew's, on the heels of which a similar and equally interesting show of nineteenth century paintings made its appearance at Messrs Knoedler's and another at the French Gallery. The French pictures at Messrs Knoedler's were followed by an exhibition of portraits by a Russian artist Mr Savely Sorin. In May Mr Max Beerbohm showed a collection of cartoons at the Leicester Galleries some of which were as witty and as dexterously drawn as any thing that has come from his hand. To some drawings, however, referring to the Royal Family objection was made which led to their withdrawal. Other exhibitions at the Leicester Galleries included one of a memorial collection of paintings by the late Sir James Shannon, R.A. Another memorial exhibition, of watercolours and etchings by the late Colonel Robert Goff was held at the Fine Art Societies, where, too, were shown

a number of drawings illustrating Don Quixote, by Ricardo Marin a Spanish draughtsman and painter. An exhibition of carved ivories was held at the Burlington Fine Arts Club.

At Christie's the most sensational sale was that of Sir Joseph B. Robinson's collection. His collection contained some fine pictures and their quality appealed so much to him when he saw them arranged at Christie's that he felt he could not part with them. Therefore he raised the reserve price to an extent that made the selling of them impossible except in a few cases and as the sale proceeded picture after picture was bought in. There were several sales at famous country houses including, Ashridge, Brocklet Hall, Strawberry Hill and Belhus. Of these the most important was at Ashridge where a Vandyck fetched £20,400 and a Cuyper the 'Mass' at Dordrecht £1835. At Brocklet Hall a Reynolds reached the highest price an equestrian portrait of the Prince of Wales, for which £5000 was paid. At the sale of the Duke of Devonshire's pictures in July a portrait of Vandyck by himself sold for £5985 and on the same day Gainsborough's portrait of Robert Adair went for £4000, and a landscape by the same artist for £4000. A self portrait of Gainsborough, with his wife and child realised £3125 and his 'Rural Courtship' £3350. Romney's 'Miss Diana Stuart' £3780, and his 'Lady Augusta Murray' £3900. Among modern pictures Holman Hunt's 'Scapegoat' sold for the high price of £4830 and for four panels of Gobelin tapestry, £15,750 was paid.

The League of the Empire (FOUNDED 1901)

THE League is entirely non political and non sectarian. Its practical work has been to promote co-operation between the different countries and Colonies of the Empire mainly in affairs connected with education, and to afford full and correct information regarding them, so that the duties of citizenship may be better understood and appreciated and personal and active interest inspired in the great problems connected with our Empire's conditions and progress. The relation of the League to the Education Departments and Governments throughout the Empire has been regularised (a) through the recommendation of its work to the Governments concerned by the Colonial Office of the Imperial Government and by the Agents General in 1902-3, (b) by the active and widespread acceptance of its schemes by the different Educational Authorities and Governments. In 1907 the League carried through the first Conference between the Education Departments of the Home and Colonial Governments. One of the effects of this Conference was that the Imperial Government undertook to call the Imperial Conference on Education in 1911. In 1912 the first Imperial Conference of Teachers Associations was held by the League, and in 1913 was inaugurated the Imperial Union of Teachers. In 1914 the second Imperial Conference of Teachers Associations was held in Toronto, by invitation of the Government of Ontario. An annual meeting of the Imperial Union of Teachers takes place each July. The League through the liberality of the late Mr Louis Spitzel, has published a series

of text books on the Empire under the editorship of Prof. or A. F. Pollard (1) 'The British Empire—Its Past Its Present and Its Future' (a book of reference) (2) 'The British Empire and Its History' (for Secondary Schools) (3)

The Story of the British Empire. In 1907 the League helped to establish a place industry in St Helena. With the co-operation of the Overseas and Home Education Authorities a Scheme for the interchange of teachers throughout the Empire is now in active operation over 400 interchange appointments have already been arranged. Visits to historical places in England and on the Continent are planned for overseas teachers. The School Affiliation and Comrades Correspondence Section were established in 1902-3. Further work undertaken is the giving of lectures, the establishment of a bureau of information, essay competitions, exhibitions and the furthering of the keeping of Empire Day.

During the War the League distributed from its depot over a million articles to the hospitals and troops, besides helping prisoners and others in distress. The League has also given colours and shields to all the overseas contingents who fought for the Empire.

Hon. President, H. R. H. The Duke of Connaught and Strathearn, K.G.

Chairman, Executive Committee, The Headmaster of Winchester M. J. Rendall LL.D.

Hon. Treasurer, Sir Philip Hutchins K.C.S.I.

Hon. Secretary, Mrs Ord Marshall, C.B.E.

Address 124 Belgrave Road London S.W. 1

OPERA—Although the glories of pre-war Covent Garden have yet to be duplicated, those who are content to savour opera in a language other than the original have reason to be grateful to the National Opera Company. "Madame Butterfly," "The Magic Flute," "The Marriage of Figaro," "Trovatore," "Aida," and other works on which the public has set its affections were performed, and the ever delightful "Hansel and Gretel" was revived—after some years of neglect. The "Valkyrie" and Siegfried had a place in a well varied repertoire while "Cavalleria Rusticana" and "Pagliacci" showed no sign of diminished popularity. Indeed they probably will be given long after. The Perfect Fool (about which there was such a to-do) is forgotten. The music of Mr. Polka's waggish opera though interesting in parts and generally telling is entertaining rather than musical. As a skit on Donizetti and other composers with whom Mr. Holst is not in accord, the Perfect Fool has its points. But Donizetti's strains—on the lips of adequate singers—are it is suggested preferable to an *extra avaria*. For the rest, the new work attracted much attention—perhaps too much.

Distinction was given to the vocal side of the undertaking by the appearance of Madame Melba, who if she has lost some of her old power still pleases those who understand the art of singing. Many critics, by the way, expressed surprise at an artist of her age being able to continue singing one authority on statistics having compiled a list of singers who had found it advisable to retire after being a fleeting twenty-five years before the public. Madame Melba no doubt was amused at the laborious composition since she is well aware that those who have always sung correctly and within their means may continue doing so almost as long as health remains. Meanwhile the *diva* sang Mimi with much of her former skill and effect.

British composers also have been represented in operatic realms by Mr. Boult's "The Immortal Hour" and Mr. Beecham's "The Merchant of Venice." The Beecham effort might have stood a better chance of success had the score been overhauled by a more competent musician than young Mr. Beecham. "The Immortal Hour," though an infinitely better attempt is some considerable way short of the ideal. Yet it ran for over a hundred performances.

CONCERTS—In London concerts there was as usual no end of vocal recitals leading. In the opinion of competent judges of singing by far the most important of these were the two recitals given by Signor Battistini who sang with all the beauty of voice and perfection of technique for which he has ever been distinguished. Triumphantly defying time, this Prince of singers whose art is well up to matchless gave renderings of the exacting "Eritu," Non più andrai, Largo al Factotum, the "Proloquio" from "Pa-liacci," and the delicious "Deh vieni" which place him in a class of his own. Signor Battistini's singing, in short, was an object lesson to intelligent students and a joy to the cognoscenti. He ranged through all the moods, and was always dignified—from every point of view. In his native land Signor Battistini is known as *la Gloria d'Italia*, a title which he has upheld for many a long year. The great baritone is the first artist to have thus been honoured.

An interesting appearance was made by Mr

Morgan Kingston a tenor, who scarcely could have been bettered in Lohengrin's "Farewell." It is, however, to be regretted that he should have included in his programme such things as "Nirvana," and similar unworthy ditties. Other singers entered in the same direction notably Madame Clara Butt, Miss Phyllis Archibald, and Mr. Tudor Davies who has something of a caustic fervent style. Mr. Chaplin, on the other hand confused his attentions to music with the singing, as also did Mr. Joseph Hislop. The last named is sometimes apt to "force" with the result that he sometimes fails to effect. A very successful *rendite* was made by Madame Selma Krüger who first sang herself into the affections of London some years ago by prolonging to a remarkable extent the trill in Ocarina's air from "L'italiano in maschera." To-day there is no more brilliant *coloratura* singer, and this is largely owing to her as to an ishingly fine breath control, which appears to be limitless. Praise also is due to Mr. Philip Wilson for introducing the (forgotten) songs of Dowland, and to Madame Tet azdini for keeping alive the glories of *l'abbi cano*. Welcome, too, was the return of Madame Gerhardt, who sang Schumann, Brahms and Schubert. Her singing may not be as flawless as is generally imagined, but she has some extremely fine moments. And that is more than can be said of all *Lieder* singers.

Verdi's somewhat operatic "Requiem" drew an enthusiastic audience to the People's Palace. The Royal Choral Society gave "The Dream of Gerontius," and the Philharmonic Society relied on works which one hears rather too often to welcome frequently. The "Philharmonic," in fact has been taken to task by a talented young composer who bitterly complains that a policy of constant repetition blocks the road which talent would dearly like to tread. The Society may, however be excused its unwillingness to encourage native enterprise, for of all the new works performed during the year scarcely any are of outstanding merit. The same must be said of the songs, whether inspired by good intention or mere trumpet-blasts, they have for the most part, failed to justify their publication. The various trifling piano, violin and cello pieces may be placed in the same category.

London has been visited by many institutions of the first rank. Zacharewitsch, Paderewski, Arthur Schnitzler (technically astonishing), Yease, each was deservedly acclaimed. So, too, was Miss Beatrice Harrison who secured for Mr. Cozens extremely diffuse Rhapsody a better reception than, in the opinion of some critics, it merited. One could not wish for a finer performance.

THE PROVINCES—Birmingham has again enjoyed M. Dupré's recitals the organist having exploited the modern French school of composers. Orchestral concerts have made life at Harrogate pleasant. Leeds has heard music of every conceivable description. Liverpool was afforded the advantage of hearing Mr. Lionel Tertis a viola player of rare quality, and Manchester rejoiced in a series of mid-day concerts which included a Wolf song recital. Romford ever keen on Coleridge Taylor, found Hlwatha's Wedding Feast to its taste. Southport rang the changes on modern British works and Ilkley, Bedford, Brigg, High Wycombe and a multitude of other towns and townlets indulged in choral competitions. The

Edinburgh Harmonists' Society celebrated its centenary by including in a well-chosen programme the interesting "Matona lovely maiden" of the sixteenth century Orlandus Lassus, while a Patterson orchestral concert was patriotically devoted to Scotch music. Subsequent Patterson concerts, being cosmopolitan proved infinitely more acceptable to well regulated music lovers who are not enamoured of Northern products. Sheffield launched out into an amateur performance of "Lohengrin, truly an ambitious undertaking, the Preston Choral Society—a very ancient body—delighted Prestonians on many occasions and the Bournemouth Festival enabled several young composers to secure a hearing. During this festival a memorial tablet to Sir Hubert Parry was unveiled, much to the satisfaction of Bournemouth, where the late composer was born. Bath held a Spring Festival at which Mr John Ireland gave a recital of his pianoforte compositions, Birmingham listened appreciatively to Gounod's "Redemption", and the Doncaster Musical Society—assisted by the Leeds Symphony Orchestra—offered its patrons "The Dream of Gerontius." (It would be interesting to know how many times this work has been performed during the past twelve months.) The Cardiff Blue Ribbon Choir selected for its forty second annual concert Elgar's "King Olaf," which scarcely shows the composer at his best. The Royal Engineers enchanted all Chatham with a spirited rendering of the "Meistersinger" overture, and the Dundee amateurs, not to be outdone by Sheffield ventured on "La Damna-

tion de Faust," two hundred children taking part in the final scene. The Scottish Orchestra "provided the accompaniments," to quote a local paper.

Newcastle was asked to say which it preferred, ancient or modern English songs, and (aspiring composers excepted) the Northerners showed their good taste by voting for the lights of other days. Oxford was afforded the opportunity of hearing Miss Irene Scharrer, whose pianoforte recitals are an outstanding feature of provincial music. Bristol, much to its credit, held a Byrd Week celebration, the local Musical Club following suit with a programme of Byrd madrigals. Bristol is to be congratulated on its respect for good music.

PUBLIC SCHOOL MUSIC—Forty years ago music at the public schools consisted mainly of bad singing, more or less faulty playing and a taste for poor compositions. Now a-days these things are better done, as witnesseth the programmes of the Eton and Winchester Musical Societies. During the summer term the Eton Orchestra gave an excellent rendering of the slow movement from Beethoven's "First Symphony," and Moszkowsky's "Spanish Dance in G Minor" while several of the singers (who showed promise) exhibited a preference for Mozart airs. The Winchester Glee Club was heard to considerable advantage in unaccompanied part-songs, Mr G. E. H. Palmer, a pianist of attainment exhibiting a pretty touch in Debussy. Decidedly an improvement on past efforts.

Minor scholastic establishments also have launched out, and with praiseworthy results.

IMPERIAL COINS ISSUED IN THE BRITISH DOMINIONS

Year	GOLD			Silver	Bronze	Total
	London Mint	Australian and Ottawa Mints	Total			
1915	£21 301 000	£7 924,389	£29,225,389	£7,598,977	£248 415	£37 028 781
1916	1 554 000	6,847 449	8,401 449	8 198,428	457 800	17,046,677
1917	1,014 000	6 770 624	7,784 624	4,137 085	588 365	12 470,074
1918	—	13,925 178	13,925 178	8 885 384	418 845	23 229 407
1919	—	5 529 305	5,529,305	3,876 175	286,590	9,992,070
1920	—	3 370,506	3,370,506	5,135,515	599,780	9,105 861
1921	—	3,394 367	3,394 367	8,520,151	602 795	12,526 313

Mint Marks—The designs adopted for gold coins are identically the same in the Mints of London, Ottawa, Sydney, Melbourne, and Perth, with minute 'Mint Marks' immediately above the date on the reverse side—the letter S (Sydney), M (Melbourne), P (Perth), C (Ottawa, Canada) and I (Bombay, India), otherwise, all Imperial gold coins are of identical design.

INCOME TAX AND SUPER TAX

INCOME TAX AND SUPER TAX—The estimated net produce of each penny of Income Tax (excluding Super Tax) was £4,900,000 (1920-21), and was estimated at £4,750,000 for 1921-22 and at £4,450,000 for 1922-23. The number of individuals in Great Britain and Northern Ireland with incomes above the exemption limit for the year 1922-23 was estimated at 4,750,000, of whom a 500,000 were covered by personal allowances, deductions and reliefs. For the year 1921-22 it was estimated that there were 48,000 persons with incomes exceeding £25,000 and with an estimated total income of £3,500,000,000. It was provisionally estimated that in the same year about 80,000 people with an estimated total income of £4,700,000,000 would be liable for Super Tax. The estimated gross income brought under review for Income Tax and Super Tax in Great Britain and Northern Ireland was £5,900,000,000. The actual income liable to tax before deduction of personal and family allowances and reliefs was £2,250,000,000, and the total taxable income on which tax was paid was £1,250,000,000.

APART from the productions of Flecker's *Hassan*, John Drinkwater's two dramas, and the two Czechoslovakian plays, a new play by Henry Arthur Jones *The Lie*, was produced with success by Miss Sybil Thorndike at the New John Maedfield was represented by *Meloney Holopur* certain of Sir Arthur Pinero's and Sir James Barrie's plays were revived, and among the new productions were plays by Alfred Sutro, Somerset Maugham and A. A. Milne. One of the successes of the year was *The Green Goddess* the first play of William Archer, the Ibsen translator and dramatic critic.

In addition to many Shakespearean productions at the 'Old Vic,' Miss Thorndike put on *Cymbeline* for a run, while an operatic version of *The Merchant of Venice* attracted attention. The following is a list of the principal London productions of the year —

ADELPHI — July 13, 1923. *The Young Person in Pink*, by Gertrude Jennings and *Roseland* by Sir James Barrie, revived (Mr Donald Calthrop and Mesdames Lillian Braithwaite, Sydney Fairbrother and Kate Cutler). Sept 8 *Head over Heels* a musical comedy by Seymour Hicks, with music by Harold Fraser Simson (Messrs W H Berry Arthur Pusey Bobbie Tomber and Dennis Noble and Mesdames Mabel Sealby Helen Friers and Pollie Emery).

ALDWYCH — March 23, 1923. *Beltane Night*, a drama by Vera Berlinger (Messrs Sam Livesey and J C Buckstone and Mesdames Eamé Beinger Joyce Carey and Mary Brough).

AMBASSADE — Nov 2, 1922. *The Secret Agent*, a play by Joseph Conrad (Messrs Russell Thorndike St. Baiba West Clifton Boyne and Jeven Brandon Thomas and Mesdames Miriam Lewes and Amy Brandon Thomas). Dec 14. *Sweet Lavender* Sir Arthur Pinero's comedy revived (Messrs E Holman Clark Jack Hobbs and E Lyall Swete and Mesdames Lillian Braithwaite, Isobel Elsom and Ann Frevor). Feb 29, 1923. *A Little Bit of Fluff* W W Ellis's farce revived (Messrs Ernest Thesiger and F rley Bishop and Mesdames Nan Marriott Watson and Peggy Hyland). March 29. *Marriage by Instalments* a comedy by Bernard McFivale and Richard Bird (Messrs Henry Kendall George Hayes and Frank Bertalan and Mesdames Muriel Alexander and Clare Greet). April 16. *Trespasses*, a comedy by Edward Percy (Messrs Lyn Harding and Frank Lister and Mesdames Ethel Griffies and Do Isytton). May 14. *The Piccadilly Puritan*, a comedy by Lechmere Worral founded on the novel of Mrs Wentworth James (Messrs Langhorne Butler and James Carew and Mesdames Dorothy Minto and Rita Page). June 5. *The Lilies of the Field* a comedy by J Hastings Turner (Messrs J H Roberts and Clifford Mollison and Mesdames Edna Best, Meggie Albanesi and Gertrude Kingston).

APOLLO — Nov 16, 1922. *Devil Dick*, a drama by A. Schoner (Messrs Maurice Moscovitch Michael Sheibroke and Robert Horton and Mesdames Mary Merrill and Muriel Pratt). Dec 5. *Hawley's of the High Street* an eccentric comedy by Walter W Ellis (Messrs Francis Lister and Edward Irwin and Mesdames Alice Moffat, Clare Greet and Elsie Craiz). Dec 18. *Through the Cracks*, a children's play by Algernon Blackwood and Violet Pearl (Messrs Farren Souter and Gerald Anderson and Mesdames Clare Greet and Lorna Hubbard). Jan. 25, 1923. *A Roof and Four Walls*, a comedy by E. Temple Thurston (Messrs Nicholas Hannen, O B

Clarence, Allen Jones and Landerdale Matland and Miss Phyllis Neilson Ferri). May 24. *What Every Woman Knows*, Sir James Barrie's comedy revived (Messrs Godfrey Tearle, Henry Vihart and Athole Stewart and Mesdames Hilda Trevelyan, Marie Hemingway and Lady Tree).

COMEDY — July 31. *Peace and Quiet*, a comedy by Horace Hodges (Messrs. Ho see Hodges Tom Reynolds and Douglas Burbidge and Mesdames Louise Hampton and Winifred Izard). Aug 28. *The Elopement*, a comedy from the French of Armont and Gerbido, by Arthur Wimperis (Messrs. Ronald Squire John Deverell and Franklyn Bellamy and Mesdames Edna Best Tonie Bruce and Helen Hays). Oct 24. *The Last Warning*, a drama by Thomas F Fallon revised by Arthur Roe (Messrs Thurston Hall Brember Willis and D A Carke Smith and Mesdames Frances (arson and Olive Sloane).

COURT — Dec 26, 1922. *Alce in Wonderland* by H Savile Carke, revived (Miss Evelyn Joyce) and *When Knights were Bold*, Charles Marlowe's farce, revived (Mr Bromley Challenor). Jan. 31, 1923. *Threes a Crowd*, a farce by Earl Derr Biggers (Messrs Bromley Challenor, Eric Lewis and Frederick Lester and Mesdames Maud Hemingway and Dora Baiton). March 5. *Cert Blanche*, a revue (Messrs. Rob Adams, Bob Alden and Tubby Edlin and Mesdames Billie Hill and Odette Myrtle).

CRITERION — Jan 25, 1923. *Advertising April* a farce by Herbert Farjeon and Horace Horsnell (Messrs Frank Cellier and Lawrence Anderson and Mesdames Sybil Thorndike Margaret Yaid and Elizabeth Pollock). July 4. *Send for Dr O Grady* a comedy by George Birmingham (Sir Charles Hawtrej, Messrs Holman (Clark and Arthur Sinclair and Mesdames Maile O'Neill and Margaret Bannerman). BIRTH RATES AT HOME AND ABROAD

The birth rate in England and Wales for 1921 at 22 4 per 1,000 persons living was the lowest recorded (except for the war years 1915-19), since civil registration was instituted in 1837. For the decade 1841-50 the birth rate was 32 6 for that from 1871-80 it was 35 4 and for the first of this century (1901-10) it was 27 2. Had the births in 1921 been at the rate prevailing in 1871-80 they would have numbered about 1 340,000 instead of 828,814. The death rate was 12 1 per 1,000 and the excess of births over deaths or natural increase, was 390 185, or 10 3 per 1,000 of the population.

The records from the British Dominions show wide variations in birth, death and marriage rates. The highest birth rate was 30 3 in Manitoba and the lowest 20 3 in British Columbia. New Brunswick showed both the highest death rate (13 9) and the highest infant mortality rate (123 per 1,000 births). Below are the aggregate figures for the principal Dominions—

	Population	Birth Rate	Death Rate	Marriage Rate
Australia	5,455,426	24 95	9 91	17 18
Canada	6,417,000	26 03	10 06	15 08
New Zealand	1,223,901	23 34	8 73	17 38
South Africa	1,526,468	28 33	11 07	16 50

* Figures for Consumption are estimated on averages for 3 years.

In the first half of the 17th century (1633 has been cited as the best approach to a definite date) we meet with the earliest mention of the introduction of rails for the lessening of friction upon roads. Beams of wood some six or seven inches in breadth were about this time laid down to facilitate the draught of the wagons in the vicinity of some of the coal mines at New Castle, and as a matter of necessity the addition of 'sleepers' had speedily to follow. In 1738 at Whitehaven, it is stated that iron was first substituted as the material of the rails, and in 1767 it appears established that this revolution was adopted at Coalbrookdale, being followed nine years later at the Sheffield Colliery. As yet, however, only thick plates of iron were fastened to the surface of the wooden rails, and it was not till 1789 that 'edge rails' were introduced, the credit of their adoption being assigned to William Jessop, on the Loughborough and Nantpantan line. James Watt had conceived the idea of utilising steam for locomotion, and there is a record of a model locomotive having been used in Cornwall in 1784. George Stephenson, however, in the year 1825 was the first to bring the project fairly into practical shape.

The first Act obtained for the construction of a railway was that of the Surrey Iron Railway Company in 1801 for a line $2\frac{1}{2}$ miles long, from Wandsworth to Croydon. In 1804 an Act was passed for making and maintaining a railway or tramroad from the town of Swansea into the parish of Oystermouth in the county of Glamorgan, and for the hauling or drawing of wagons or other carriages passing upon the said railway or tramroad with men, horses, or otherwise.

Up to 1840 inclusive, 399 Acts authorizing the construction of 3,000 miles of line had been passed. The inevitable reaction set in, and in 1843-4 only a few small Bills were passed by the Legislature, but in the Liverpool and Manchester, the London and Birmingham, and other leading concerns were paying 10 per cent dividends, and some of the smaller lines were yielding even larger returns. Attention was naturally drawn to the remunerative character of this class of property, and the supply of railway shares became far below the demand. A flood of new projects appeared before the public, and the Legislature even labouring apparently under the general excitement, encouraged promoters by relaxing or withdrawing the general opposition which had previously been offered. In 1844, 797 miles were authorized in 1845, 883 miles, and in 1846 the prodigious total of 4,790 miles under no less than 572 Acts, obtained Parliamentary sanction. The succeeding years saw some abatement, but still there were 1,663 miles passed in 1847, and 300 in 1848. These figures illustrate the rise and fall of the great fever known as the 'railway mania.'

The Railways Regulation Act of 1840, the first of the General Acts, provided for a month's notice being given to the Board of Trade before opening for returns of traffic to be made by the companies, as also of accidents involving personal injury for Government inspection of works, for the approval of bye-laws &c. Afterwards were passed Acts for their better regulations and for the conveyance of troops, 1843, the Railways Further Regulation Act of 1844, the Railways Clauses Consolidation Act, 1845, and the Canal and Railway Carriers Act of the same session.

The Cheap Trains Act 1883 provides that fares

not exceeding the rate of one penny per mile shall be exempt from duty, but fares for return or periodical tickets shall be exempt from duty only where the ordinary fare for the single journey does not exceed that rate. Duty shall be payable at a reduced rate of 5 per cent on fares exceeding the rate of one penny, a mile between stations within one urban district. Such district shall contain not less than one hundred thousand inhabitants and must be of a continuous urban as distinguished from a rural or suburban character.

Officers or men in the military or police forces when travelling on public service, are charged three-fourths or one-half of ordinary passenger rates according to number travelling. The Act does not extend to Ireland.

Hiring of Special Trains—The charges per mile for hire of special trains are 12s. 4d. single and 20s. Return, plus the ordinary fare for each passenger according to class of vehicle hired.

The Workmen's Compensation Act 1897—This Act, which received the Royal Assent on Aug. 6, 1897, came into operation on July 1, 1898.

Government Control of Railways commenced August 4, 1914, and ceased at midnight on Monday, August 25, 1921.

THE RAILWAYS ACT 1921

The Railways Act which received the Royal Assent on Aug. 19, 1921, contains 86 clauses and is divided into six parts to which are added nine schedules. Under the Act railways in Great Britain are formed into groups. Before Jan. 1, 1923, the constituent companies in any group may submit to the Minister of Transport an agreed amalgamation scheme, and the amalgamated companies may submit agreed schemes for the absorption of the subsidiary companies in their groups. Railing agreement schemes for amalgamation and absorption are to be settled by the amalgamation tribunal set up under the Act. The date tentatively fixed for the completion of grouping is July 1, 1923. The amalgamations of constituent companies preceding the absorption of subsidiary companies. Agreed amalgamation or absorption schemes must be submitted to the stock and debenture holders concerned before being referred to the tribunal. In the event of postponement later than July 1, 1923, in the case of any group during the period of postponement the undertakings concerned may and shall if the amalgamation tribunal so direct be used, worked, managed, maintained and repaired as one joint undertaking, and the net receipts shall be distributed as agreed or as may be decided by the tribunal. This tribunal will consist of Sir Henry Ruxton Smith, G.B.E. (President), Sir William Plumer, G.B.E. and Mr. G. J. Talbot, K.C., and will be a court of record. The remuneration of the members of the tribunal and their clerks &c. must not exceed in the aggregate £35,000, and this and any other expenses have to be defrayed by the Amalgamated Companies. The decision of the Court of Appeal or of the Court of Session, on a special case stated by the amalgamation tribunal shall be final except with leave of such court. Sections 11 and 12 deal with the payment of £50,000,000 in settlement of the 'Railways Compensation Account' in two instalments of £30,000,000. Part Two deals with the protection of the public inasmuch that the railway companies may be required by the Railway and Canal Commission, on a proper complaint being

made, to afford reasonable services, facilities and conveniences. The Minister of Transport may require railway companies to conform gradually to measures of general standardisation of ways, plant and equipment and to adopt schemes for the co-operative working or common user of rolling stock, workshops, manufactories, plant and other facilities. Under Section 18 the Minister has power to confirm agreements between companies for the purchase, lease or working of railways.

Part 3, Section 20 to 26 deals with the constitution and procedure of Rates Tribunal. They establish a court of record styled the Railway Rates Tribunal, consisting of three permanent members, and the staff attached to it must not exceed 10 persons. Permanent members of the tribunal will be appointed by the Crown on the joint recommendation of the Lord Chancellor, the President of the Board of Trade, and the Minister. In November, 1922 the following appointments to Rates Tribunal were made—(the late) Sir F. Gore Browne K.C., President, succeeded by Mr W. B. Clode K.C. Mr W. A. Jepson, late assistant to General Manager of L. & N.W. Ry. as the railway representative and Mr G. C. Locket of Messrs Gardner Locket & Hinton, Ltd., London as the commercial member. The appointments are for a period of seven years, and the members will be paid whole time officers. The Minister is entitled to be heard in any proceedings before the tribunal which must make an annual report to him for laying before Parliament. With reference to charges for competitive traffic, Section 52 provides that within a prescribed time the companies shall submit schedules of rates where the distance is 30 per cent or more in excess of the shorter route, and that these schedules shall be referred to the rates tribunal which will settle the schedule of equal rates by the alternative routes. In the case of new circuitous routes (i.e. routes longer by 30 per cent. or more than the shortest route between the two places) the company must submit the route and the Minister may refer the matter to the tribunal if the difference is above 30 per cent. If it exceeds 50 per cent. the route must have the consent of the tribunal before the equal rates are applied.

The following are the four railway groups:
1 North Western, Midland and West Scottish Group, and contains the following Railways—
L & N W Furness Maryport & C
Mid Highland Cockermouth K & P
L & Y Caledonian S on A & Mid J
North Staffs G & S W Other Companies
2 North Eastern, Eastern and East Scottish Group, and contains the following railways—
N E G N G N of S
G C Hull & B Other Companies
G E N B

3 Western Group, and contains the following railways—
G W Mid & S W Jct Other Companies
Cambrian Local S Wales

4 Southern Group, and contains the following railways—
L & S W L B & C S E & C I of W

Section 54 orders that each company shall at each station keep available for public inspection a copy of the general classification of merchandise. These books are to be available during all reasonable hours without fee. Each company must also keep available for 10 years at its head office all documents specifying the rates and conditions in use on Jan. 14, 1920, and a sub-section requires the proportion of any rate appropriated to conveyance by sea to be stated. Part 4 deals with wages and conditions of service, Part 5 with Light Railways, and Part 6 includes sections dealing with facilities and the allocation of receipts of worked railways. Irish Railway Companies are required to furnish accounts and statistics as at present until other provision is made by the Council of Ireland. Otherwise this Act does not apply to them.

RAILWAYS IN 1922 *

The average rate of interest or dividend paid—
The average rate of interest or dividend paid per cent of total nominal capital was 4.07 in 1922, as compared with 3.74 in 1921, 3.73 in 1920, 3.74 in 1919 and 3.62 in 1918. The corresponding returns paid on the total issued capital were 4.74, 4.43, 4.41, 4.42 and 4.28 whilst the interest and dividends paid per cent of receipts from

Note 1.—COMPENSATION PAYABLE TO RAILWAY COMPANIES.—The sum receivable per annum by the Railway Companies as compensation during the period of Government Control is limited to the Net Receipts of the year 1913 with the addition of 4 per cent. upon Capital Expenditure brought into use since the beginning of that year.

Note 2.—AUDIT.—The figures for the year ended March 31, 1920 are subject to audit, and as regards Government Traffic the rates at which the charges are to be raised are not finally agreed.

Note 3.—No sum has been allowed for any liabilities which may attach to the Government in respect of—(a) Re-employment of stock of stores and materials (b) Abnormal wear and tear (c) Arrears of maintenance other than permanent way and rolling stock.

Note 4.—Arrears of maintenance—permanent way and rolling stock—are estimated at 1913 cost of ascertained arrears plus 75 per cent. for additional cost of labour and material. The actual cost is not yet ascertainable but payments have only been made on the basis of a 25 per cent. addition.

Note 5.—There is a debit amount of £447,600 balance of expenditure over revenue for the year ended March 31, 1920 on Pass Road Vehicles Steamboats Canals, Docks Harbours and Wharves Hotels Refreshment Rooms and Cars, etc. thus reducing the net balance to £5,742,079. The Government Guarantee is—

Standard year proportion of net Receipts	£47,440,000
Interest on capital works brought into use	1,090,600
Total Government Guarantee	£48,530,600
Less net Balance of Revenue over Expenditure	7,142,970
Net Government Liability for year ended March 31, 1920	£41,387,630

by 13 s per cent. Coaching train miles (electric traction) increased from 30,902,033 to 32,081,716.

Compared with 1921, coaching train miles per train hour increased from 13 s4 to 13 s5, and per engine-hour from 10 s2 to 10 s7, while freight train miles per train hour increased from 8 s1 to 8 s3, and per engine hour from 3 s1 to 3 s1.

The total number of ordinary passenger and workmen's tickets issued in 1922 was 1,94,686,116, as compared with 1,229,423,512 in 1921, a decrease of 3 s per cent. Receipts from ordinary and workmen's tickets fell from £73,503,127 to £70,706,930. Season ticket receipts, on the other hand, increased from £11,667,422 to £12,051,71. Parcel receipts, however, fell from £18,133,253 to £16,967,922.

The tonnage of goods and minerals conveyed in 1922 was 301,625,608, an increase of 83,744,335 tons, or 38 s4 per cent, compared with 1921. In coal, coke and patent fuel there was an increase of 71,810,455 tons, or 55 s7 per cent, in other minerals an increase of 9,617,302 tons, or 24 s6 per cent, and in general merchandise an increase of 2,316,568 tons, or 4 s8 per cent. Total

goods train receipts in 1922 were £115,563,986, against £109,551,788 in 1921.

On standard gauge railways the average haul was 52 s1 miles compared with 57 s8 in 1921, and the average receipt per ton mile was 1 s14d in 1922 compared with 1 s20d in 1921. The average wagon load increased from 5 s7 tons to 5 s2 tons, and the average train load from 121 s7 to 127 s4 tons, but the average length of haul fell from 57 s3 miles to 52 s1 miles. Reduced rates came into operation at various dates during the year and the average receipt per ton fell from 9 s2 08d to 7 s6 08d.

Total railway traffic expenditure in 1922 was £176,409,620, or 80 s4 per cent of traffic receipts. Corresponding traffic expenditure for 1921 was £125,971,352. Maintenance and renewal of way and works fell from £36,630,130 in 1921 to £28,538,124 in 1922. Maintenance and renewal of locomotives and rolling stock from £49,289,330 to £32,221,104. Locomotive running expenses from £32,652,267 to £40,064,498 and traffic expenses from £67,102,771 to £56,117,645.

CAPITAL OF NEW RAILWAY COMPANIES.

In place of the numerous separate railway companies, each with several descriptions of debentures, stock and shares the Railways Act of 1921 has welded the whole of these railway companies, with a few minor exceptions, into four companies each with its huge capital divided into but a few classes. The division of capital, with the approximate amount of each class, is given in the list below—

SOUTHERN RAILWAY		Present Price
Ordinary "A" (ranking with Defe red not exceeding 3½ per cent.)	£2,480,198	35
Ordinary "B" (participating with Defe red over 3½ per cent. on Defe red)	6,080,521	13
Preferred Ordinary (5 per cent.)	27,347,621	86
Defe red Ordinary	27,347,668	38
5 per cent Preference	39,738,402	103

RAILWAY COUNCILS

Councils set up under Clause 63 of the Railways Act, 1921 provide for the following stages —

- Local Departmental Committees (at stations and depôts). In operation April 3 1922
- Sectional Railway Councils (representing various groups of grades). In operation April 3, 1922
- Railway Council (representing all grades covered by the scheme). Partially in operation
- Central Wages Board
- National Wages Board

RAILWAY ACCIDENTS DURING 1922 NOT CAUSED BY THE RUNNING OF TRAINS OR THE MOVEMENT OF RAILWAY VEHICLES

THE RAILWAY CLEARING HOUSE.

This Institution was opened in Jan 1842, and in addition to the work of clearing through bookings of passenger and luggage traffic, is the medium through which agreements relating to rates and fares, &c., are arrived at. *Chairman*, E. R. Turton, *M.P.*, *Secretary*, F. H. Price, *C.B.E.* *Office*, Seymour Street, N.W.

IRISH RAILWAY CLEARING HOUSE

The Irish Railway Clearing House occupies much the same position to the railway system of Ireland as the (London) Clearing House does to the railways of Great Britain. It was established July 1 1848. *Chairman* Sir William J. Goulding, *Bart.* *Secretary* Peter J. Biennan, *Offices*, 5 Kildare Street, Dublin.

Indian Railways

The construction of Railways in India commenced in 1853, and the total length open at the close of the Year 1922 was 37,566 miles. They have in their service 752,752 employees of whom 6,902 are Europeans, 11,609 Anglo Indians, and 732,141 Indians. The following are the principal Officials of the Government of India Railway Department—

Government of India Railway Department
(Railway Board)

Chief Commissioner C. D. M. Hindley *M.A.*, *M.I.C.E.*

Members, Col. W. W. Waghorn, *C.B.*, *C.M.G.*, *E.A.* Bell, *C.I.E.*

Government Director, * G. Deuchars

Secretary, R. McLean, *B.Sc.*

Chief Engineer, G. Richards, *B.A.*, *F.C.I.*

India Office (Railway Department)

Whitehall, London, S.W. 1

Secretary, W. Stantiall

Government Director, G. Deuchars

Con. Engrs., Messrs. Rendel Palmer & Tritton

Total gross earnings of all the railways in India during 1921-22 were about Rs. 92.89 crores of which the Imperial Government's share was Rs. 81.87 crores, Provincial Governments Rs. 0.02 crores, District Boards Rs. 0.25 crore, Indian States Rs. 3.45 crores, and private companies Rs. 7.29 crores. Gross receipts from State owned railways were Rs. 81.69 crores and working expenses Rs. 65.67 crores, leaving net receipts of Rs. 16 crores, which represent a 75 per cent on

the total capital as compared with 4.74 per cent for 1920-21, and 6.28 per cent for 1919-20. The net receipts are however, insufficient to provide for "other liabilities" which include Rs. 19 crores for interest, Rs. 5.51 crores for annuities and sinking fund, and Rs. 1.06 crores for companies share of surplus profits and the final result is a net loss to the State of Rs. 9,27,30,501. This means that for the first time since 1900 the railways have fallen from the status of an important source of revenue to the country and have added to the Government's annual liability. As the report points out however the railways have not ceased to be a paying proposition and the poor results are not due to faults in the administration. They are suffering from a combination of unfavourable factors which have similarly affected every form of business in the world. Working expenses have risen to an unprecedented degree and the earning power of the lines has not responded because trade was almost at a standstill.

Even under these unfavourable conditions the total earnings of all lines were Rs. 92.89 crores in 1921-22 as compared with Rs. 92.98 crores in 1920-21. Passenger traffic earnings (Rs. 34,29,31,000) were less by Rs. 47,34,000 on account of the shorter distances travelled by third class passengers. In goods traffic, on the other hand, though the tonnage lifted (86,246,000) showed a decrease of over a million tons, the earnings (Rs. 49,52,30,000) went up by Rs. 1½ crores. This is explained by a fall in the quantity of commodities carried at cheap rates, principally coal, accompanied by increases in some of

* Address—India Office Whitehall S.W. 1. All others at Simla, India.

the better paying commodities. Other contributory causes were the increase of rates for coal carried for use by the public and the withdrawal of concession rates in some cases.

Working expenses in 1921-22 were 76 2s per cent of gross earnings as compared with 65 54 per cent in 1920-21 and 56 8s per cent in 1919-20. In 1913-14 the percentage was 51 79. Compared with 1919-20 there was an increase in all departments but nearly half of the total increase occurred in the locomotive department alone because of the high price of fuel. This is temporary and so are the heavier renewals of permanent way locomotives, carriages and wagons which are caused by overtaking war arrears. In all departments, however, the rise in the cost of wages constitutes the

most difficult problem which still awaits solution.

During the year under review 225 14 miles of new lines were opened for public traffic about one third of which represented mileage built by Indian States and about half by private companies. Government lines opened during the year were 25 64 miles in length and were intended chiefly for military purposes. The total railway mileage is now 37,266.

NOTE.—At the standard rate of exchange of Rs 10 to the pound sterling which has been adopted, with effect from the beginning of the official year 1920-21, in accordance with the proposals of the Currency Commission, a lakh of rupees (Rs 1 00 000) is equivalent to £10,000, and a crore of rupees (100 lakhs) to £1 000 000.

BRITISH SHIP-REPAIRING.

By JOSEPH L. CAROZZI, Editor of "Syren and Shipping"

THE consensus of opinion amongst British ship-repairers is that 1923 has been a very bad one for the industry. There was a slight indication at the beginning of the year that the conditions were improving, and a period of normal employment was anticipated. Unfortunately, however, this early promise did not fructify, and the balance-sheets of the firms engaged in the business, as well as the domestic budgets of the workers, will afford ample corroboration of the fact that 1923 has been an unsatisfactory year. The causes of this are not far to seek. Freighters have shown a declining tendency right through the year, with the result that when a shipowner had a vessel upon which repairs were necessary he often laid her up instead of putting her in the hands of the repairers, because he realised that were he to continue running her his voyage accounts would show, if not an actual loss, very little profit indeed. Thus ships, the overhaul of which would have provided many welcome jobs, were relegated to the tiers of idle ships lying up in the Fal, the Tyne, the Clyde reaches and the lesser-used docks of some of our principal ports. Another factor which told against the industry was the falling off in orders for the conversion of steamers from coal to oil-burning. During 1922 this section of the industry was kept fairly busy, but the returns for last year show that shipowners regard the economies secured by oil-burning with less enthusiasm than they did a year or two back. No doubt the explanation is that they are face to face with such stringent conditions that they do not feel inclined to indulge in any expenditure—economical though it may be—unless it is absolutely necessary to keep the ship in commission. But besides these reasons there is another and greater one which has exerted its malevolent influence upon British ship-repairing. This is the regrettable friction between employers and employed. It is peculiarly unfortunate that these labour troubles should have been so persistent during 1923, because the position on the Continent was such that the competition of foreign firms was much less in evidence than it was during the previous year. The restriction of the coal output of the Ruhr increased the price of fuel at Hamburg, Rotterdam and Antwerp very considerably, and, in addition to this, shipyard workers demanded higher wages, and thus the Continental ship-repairer, hampered as he was by unstable exchanges, found that he was not able to quote so successfully against his British competitors as during 1922. This increase in Continental prices assisted the British ship-repairer, but not to the

extent which it would have the labour conditions here been more favourable. Still, there were certainly fewer British ships sent to Continental yards for overhaul and repair during 1923 than in the previous year, while at the same time the foreign tonnage which came into the hands of British firms was, if anything, larger. There can be no question that when the shipping industry recovers from the depression under which it labours, the ship-repairing business will be found thoroughly competent to deal with any calls made upon it. The general policy which firms have adopted is that of preparing for the improved trade when it comes. In this connection, it may be noted that considerable progress has been made during the year with the big ship-repairing and overhauling establishments which are being provided by Messrs Harland and Wolff in the Port of London. The largest of these will be situated at King George V Dock. It will extend to some 1½ acres, and be equipped with the most modern types of shipyard and engineering machinery. Elsewhere on the Thames there will be subsidiary yards and shops under the same organisation, where, in particular, engineering repairs will be carried out at the shortest notice. As many of the larger boats which come up the Thames have been built by Messrs Harland and Wolff, it follows that these new works will provide facilities which will be much appreciated by the shipowners concerned. Not the least interesting feature of the equipment of these works will be a floating dock capable of taking the average size vessel which uses the London docks. During the year an agreement was come to between certain North Atlantic steamship companies as to the curtailment of services during the winter, an arrangement which enables the companies concerned to lay off for repair or overhaul any other vessels without impairing the efficiency of the service. This principle of withdrawing boats during a slack season is likely to be extensively followed, and it is calculated to have a stabilising effect upon the ship-repairing industry, as it will be known that big liners will come off for overhaul at a certain definite time. Under this arrangement the *Olympic*, *Mauretania* and *Homeric* were withdrawn from service at the close of the North Atlantic passenger season. Each of them will be reconditioned and will resume operations in the spring of this year. The *Mauretania* job will be a very interesting one, as, in addition to a general overhaul, her turbines will be re-bladed. The *Homeric*, the largest reciprocating-engined vessel in the world, will be adapted to burn oil fuel under her boilers instead of coal.

SHIPS' COMPOSITIONS AND PAINTS.

By SIR WILLIAM MAXWELL, KBE

PAIN**T** in its simplest form consists of powder colour, or pigment, mixed with a liquid vehicle which serves the double purpose of enabling the colour to be spread evenly over the surface to be painted, and then, on "drying," of binding the particles of colour together to form a durable film. The purpose of this film is either to protect the surface of the material and to enhance its appearance, or, in the case of ships to prevent the growth of weed, grass barnacles &c.

The pigments used may be metallic salts alone or in combination, or dye colours precipitated on to finely powdered earths.

The liquid vehicle may take a variety of forms, according to the purpose for which the paint is required. Of the "drying" oils, linseed oil is by far the most important, used either in the raw state or "boiled" — a process which consists of heating the oil in the presence of some "drier" such as litharge or a manganese salt. On exposure, the "drying" oil combines with the oxygen of the air, more or less rapidly, according to the proportion of chemical products added in order to assist this oxidation. Such a paint is termed an 'oil paint', to distinguish it from 'varnish paint' in which the oil vehicle is replaced by a combination of gums or resinous materials alone, or with the addition of oil and thinned out with a suitable solvent. After application the solvent evaporates leaving a resinous film which may or may not continue to harden still further by the process of oxidation, according to the type of paint.

Paint may be applied merely as a protective coating to protect the surface (wood, iron, steel, stone, cement or whatever it may be) against the destructive action of the atmosphere, water, acids, or acid and other chemical fumes, or even as a proofing material against the penetration of such materials as petroleum motor spirit, &c. Each of these cases is a study in itself, and in few other industries has chemistry played so important a part in solving the problems presented. Not only the vehicle used, but also the pigment adopted, has to be studied with a view to producing a chemically stable film that will adhere to the particular surface in question, and last for as long a period as possible as a protection against the action to which the surface will be exposed.

These problems are rendered still more complicated when it is required to produce a paint fulfilling such difficult conditions and at the same time having to be of a particular colour. An otherwise perfect composition may be rendered worthless by the introduction of certain colours which set up chemical action on other ingredients of the paint. Even in the case of ordinary oil or coloured enamel paints, the chemistry of the pigments is of primary importance, as unskilled mixing of certain colours together may produce chemical reactions which, although not immediately evident, may, in a short time, cause the disintegration of the paint film.

Another important point in the case of iron structures subjected to the varying temperature of the air, and the consequent expansion and contraction of the iron, is the necessity of producing a paint film which, after the initial drying, will remain elastic. The Chemical Laboratory has done much to produce such a

paint, both by the selection of first class materials after careful chemical analyses and the judicious blending of oils and pigments, as well as by the exclusion of all resinous materials or chemical products likely to produce cracking of the paint film.

One of the most astounding and certainly, both from a chemical and economical point of view, most interesting developments of scientific paint making during the last fifty years has been the production of special compositions for protecting the bottoms of ships. To trace the history of these paints step by step is beyond the scope of these notes, but, briefly, it was the advent of iron ships that brought with it the problems of corrosion and fouling—that is, the marine growth which attaches itself to objects immersed for any length of time in the sea.

Copper sheathing, formerly applied to wooden vessels, in order to prevent the growth of weeds and barnacles as well as the ravages of the boring worm, could not be applied to iron vessels, owing to the galvanic or electrolytic action set up between two such metals as iron and copper when immersed in a salt solution. A protective layer of wood was tried before covering the bottom with copper sheets but this soon became impregnated with sea water, and the corrosive action continued as before. Experiments were then made to produce anti fouling paints. By a continual process of trial and elimination of various antiseptic and toxic compounds, coupled with close study of the complex chemical reactions, it has been possible to produce a composition applied just like an ordinary paint, which is acted upon by the sea water in such a way as to cause a gradual emanation of a poisonous compound, thus killing in the germ stage all that varied animal and vegetable marine life which would otherwise adhere to and develop on the ship's bottom.

Such a paint, however, is itself very corrosive if allowed to be directly in contact with the iron or steel plates. This defect has been overcome by further study of the chemical reactions produced, and for some time it has been the general practice to apply a first coating of a special anti-corrosive paint to insulate from the ship's bottom the last or anti fouling coating.

The economical importance of a reliable anti fouling paint can readily be appreciated when it is considered that on an unprotected ship there may accumulate, in a comparatively short time, tons of barnacles and weed, thereby reducing the speed of the vessel by several knots. In the case of warships the importance of speed is obvious, but in the case of merchant vessels the fact is sometimes overlooked that if the ship's bottom is allowed to become foul through the use of an ineffective anti fouling paint, a day or two's delay may result in even a short voyage, with consequent high fuel consumption and extra wages, to say nothing of valuable time lost to the owners of the vessel, such monetary losses being out of all proportion to the cost of a reliable composition.

Britishers have long realised the importance of protecting and maintaining property in general, on land or afloat, and perhaps that, coupled with the results of highly organised chemical research, is why British paints enjoy a reputation unequalled by any other in the world.

LIFE RAFTS AND BUOYANT APPARATUS FOR OCEAN-GOING CRAFT.

By ERNEST W BLOCKSIDGE, M I N A , Author of "Ships' Boats"

"SAFETY of Life at Sea is a subject of the greatest importance to the travelling public. It is one which demands the close attention of the naval architect, shipbuilder and shipowner

The difficulties confronting the ship's officers, when it becomes necessary to abandon a large passenger vessel at sea after casualty, and transfer 4,000 people from her decks in 68 lifeboats safely to the water, cannot be fully realised by the "man in the street". It is the constant desire of the responsible Government authority and the shipowner to reduce the perils to which passengers and crews would be exposed under such circumstances, consequently, the rules for controlling the equipment of vessels with suitable life saving appliances are periodically revised

In the year 1894 the Board of Trade was empowered to appoint a Committee of fifteen gentlemen representative of all the shipping interests, for the purpose of advising the Board on the preparation of rules for life saving appliances. This elected body is known as the Merchant Shipping Advisory Committee

The attention of the whole civilised world was focussed on the inquiry into the circumstances attending the remarkable and regrettable disaster to the *Titanic* which occurred in mid Atlantic just before midnight on the 14th April, 1912, when 60 per cent of the persons on board were drowned

Immediate steps were taken by the Board of Trade, through their Advisory Committee to formulate new regulations for the purpose of avoiding in the future a repetition of the conditions which attended this disaster and their recommendations were published in July 1912

The principal requirement of the Rules for Life Saving Appliances, issued in 1913 and 1914 as a result of the Advisory Committee's suggestions, was that lifeboats should be carried on all foreign going passenger vessels in sufficient number to accommodate all persons on board, and it is around this enactment there has been much discussion since the introduction of the Rules.

Experience during the early stages of the submarine war on merchant vessels prompted the Board of Trade to issue a circular to ship owners urging the necessity of carrying light rafts or buoyant apparatus on all vessels, in addition to the statutory equipment of lifeboats. This type of life saving equipment was the means of saving a large number of lives, and in certain instances when time did not permit of the lifeboats being lowered, rafts were the only available means for saving life

It has been fully realised by the Merchant Shipping Advisory Committee that the experience gained under the working of the Rules for Life Saving Appliances makes it very doubtful whether modern legislation has been as effectual as was anticipated when the Rules were issued in 1914. The Committee, therefore, have again given careful consideration to the whole subject and have formulated recommendations for adoption by the Board of Trade

It is now considered that rafts of sufficient strength to be thrown from a vessel's deck, and strong enough to carry persons out of the water rather than support them in the water, could not, in the opinion of the Committee, be handled without mechanical appliances

The apparatus recommended by the Committee is, therefore that which can be easily handled and thrown overboard if necessary, sufficient buoyancy being provided to enable a weight of 32 lbs to be supported in the water for each person the apparatus is certified to carry

Time is the factor which controls the situation when a disaster occurs at sea. The quality of handiness is therefore, of great importance in the design of a light raft

The practical advantages of the light form of life rafts are —

- (1) They can be easily stowed for immediate use when the limit of time is not sufficient to enable all the boats under davits being launched overboard, and
- (2) If a vessel takes a heavy list after casualty, the light rafts can be used from either side

All foreign going passenger vessels will, in the near future, carry light rafts in addition to the accommodation provided in lifeboats. The space occupied by one stack of light rafts (16 in number), stowed in double tier, would measure overall 8 ft. 5½ in by 6 ft. 8 in and 5 ft. 4½ in. in height, and give support to 320 persons in the water. Four stacks of life rafts would, therefore, be sufficient for an Atlantic passenger vessel carrying over 4,000 persons, to comply with the Committee's requirement that life-rafts should be supplied in numbers equal to 25 per cent of the number of persons on board

Certain classes of home trade vessels carry more passengers in relation to their length than the foreign going vessel, owing to their limited voyages. Being within easy reach of harbour and assistance from other vessels, they are, therefore, permitted to carry, in addition to a scheduled number of lifeboats, a percentage of approved buoyant apparatus in the form of light rafts, buoyant deck seats or other approved design

Before lifeboats or buoyant apparatus can be accepted as a part of the statutory equipment of a passenger vessel, they are subjected to severe tests, and constructed under the supervision of Board of Trade surveyors to an approved specification

The light rafts carried on foreign-going passenger vessels are suitably equipped with paddles, boathook, painter, self lighting lights and signal flares. Rafts supporting less than 25 persons are not required to be fitted with paddles, boathooks and flares

The light life raft or buoyant apparatus has now become an important part of the life-saving equipment on board passenger vessels, and if simplicity and efficiency are rigidly maintained in other details of equipment, loss of life at sea will be reduced to a minimum

PERRY & CHAMBERS'

PATENT

DOUBLE & SINGLE BUOYANT DECK SEATS & LIGHT RAFTS

The above illustrates 16 Light Rafts each certified for 20 persons stacked in 2 tiers of 8, only occupying a deck area of 8 ft 5½ ins × 6 ft 3 ins, the total height being 5 ft 4½ ins. The lightest and handiest Light Raft on the market.

THE IRON AND STEEL WIRE INDUSTRY.

By H D LLOYD, Assoc M Inst C.E.

THE Trade Statistics for the past twelve months ended June 30, 1923, show that, in spite of continued depression in general trade, and of numerous difficulties in foreign trade arising from depreciated Exchanges, the British Iron and Steel Wire Manufacturers have succeeded in securing an increased share of the world's business.

The figures of British Exports, given in detail below, show a gratifying increase in British Trade, particularly in the Exports of Wire Cables and Rope, Wire Netting and general Wire business.

In the Home Trade production has also been well maintained, in spite of severe competition, both amongst the Home Trade Manufacturers themselves and from imported goods.

The total output of the Trade for the current year will, so far as it is possible to make an estimate at the present time,

be equal to, if not in excess of, the total output for 1918, in other words, the trade has regained a position in regard to quantity of output at least equal to that which it held before the War. How this position has been secured may be a matter of individual opinion, but there is no real doubt but that the chief factor in establishing the position of the Wire Trade has been the willingness of Manufacturers generally to incur heavy losses in their efforts to bring down prices to a competitive world level. Every effort in this direction has been successful in securing more business for the British Wire Industry, with a corresponding reduction in the cost of overhead charges per unit of output, and, whilst the policy referred to is a drastic remedy to pursue, it has at least resulted in such a measure of business that the trade can now be carried on, if not with profit, at any rate without serious loss.

LEAD.

THE manufacture of lead is amongst the oldest of British industries, and within recent years it has developed into one of considerable magnitude and importance

Among the chief uses to which lead is put is its conversion into white lead (hydrated carbonate), which, when ground with oil, forms a pigment of great value in itself, and is the most reliable base for practically all paints

It is also largely used in glazing pottery and porcelain

The method of manufacture chiefly adopted in this country is the old stack process, which, though slow, produces white lead of great covering capacity, density and durability

Red Lead (sesquioxide) is manufactured on a large scale, and after mixing with oil, forms the most valuable pigment for protecting steel and ironwork, it is also an important ingredient in optical and other glasses, and during the war was in great demand for the electrical storage batteries used in submarines, &c

Litharge (monoxide), an equally important oxide of lead, is largely used in the rubber, varnish and accumulator industries

Metallic lead is in universal use in civilized countries in the form of sheet lead for roofing, &c, and pipes for water and gas, and owing to its great acid resisting power, pure lead is extensively utilized in plant for the manufacture of sulphuric acid and other chemical products

For chemical purposes the presence of slight impurities is sufficient to seriously

reduce the life of the sheets and pipe, and ingenious methods have recently been introduced for freeing the lead from all traces of impurities

Alloyed with tin, lead forms solder, and lead alloyed with antimony is used for shrapnel bullets, type metal, &c

Lead also is largely used for covering electric cables

In Nature, lead occurs chiefly as a sulphide ore, which, after being mined and dressed, is calcined for the removal of the sulphur, and the roasted ore is smelted—usually in water-jacketed blast furnaces—to the metallic state

The metallic lead thus obtained frequently contains silver of considerable value and appreciable quantities of gold and other metals

Before such lead can be manufactured, the silver and gold must be extracted and the other impurities removed

Impurities such as copper, antimony, and arsenic are eliminated by lixiviation and calcination, and the precious metals are usually recovered by stirring zinc into the molten lead, zinc, being lighter than lead and having a greater affinity for gold and silver than lead possesses, on cooling carries the precious metals to the surface, so that they can be removed by skimming

Lead ore is mined to a small extent in the North of England, Derbyshire, and Wales, but the chief lead-producing countries at the present time are America, Australia, Spain and Burma

The world's production of lead exceeds a million tons per annum.

and

ROPEMAKING.

THE industry of ropemaking is one of remotest antiquity. The earliest materials were probably the fibres of plants and grasses the inner bark of trees the hairs of animals and their hides cut into thongs and twisted together. By the old Egyptians as their inscriptions show, flax and the fibres of the date tree besides raw hides, were utilised. Herodotus records that in constructing the bridge of boats by means of which the army of Xerxes crossed the Hellespont the Persians made cables of flax and papyrus of 28 inches circumference. The natives of Peru used fibres of the magney, from which they twisted cables strong enough to support their primitive suspension bridges. For thousands of years ships have been rigged with rope. As long ago as 1250 B.C. the hulls of Egyptian vessels were often strengthened by girdles of them, and heavy rope cables were a part of the equipment of the Athenian navy. In first class ships of to-day the running rigging is made of hemp rope the standing rigging shrouds stays and back stays being of wire rope.

Up to about 1800 the spinning of yarns stranding and laying of ropes had been carried on by hand but the general adoption of steam as a motive power which revolutionised the industries of the world had a direct effect on rope manufacture. Steam engines were installed and power driven machinery was laid down. The equipment of a modern rope works is costly and elaborate and the business being a highly specialised one, necessitates the employment of skilled labour on a large scale. It is of some interest to note that the first machines for twisting handspun yarn into strands were made in England and a few of them being sent to the United States the new method was at once adopted there.

Prior to the outbreak of war in the Crimea, manufacturers had been dependent on a hempen fibre imported exclusively from Russia, from which were made the tarred 4-inch mooring-cables of our old wooden first-raters. A part of the mooring hawser of the *Royal George* sunk at Spithead in 1787 is still in existence and although it had been immersed for half a century its fibre is almost as fresh as when new. When hostilities cut off Russia as a source of supply and British ropemakers had to look elsewhere they found a superior substitute in Manila hemp—*musa textilis*. This plant is indigenous in the Philippine Islands and all attempts to extend its geographical range have failed. To-day the resources of the Philippines are supplemented by importations of other vegetable fibres from, principally Russia, India, Italy, New Zealand, East and South Africa, China, Mexico, the United States and South America. On the differences and variations of properties and qualities of these materials depend the heaviness and other characteristics of the products made from them. On account of its strength, flexibility and durability, Manila hemp holds first place. It is the principal raw material from which the wants of the Royal Navy and Merchant Marine are supplied, ropes and hawsers made from it being capable of bearing a maximum strain. Its origin is the leaf stalks of a non-edible plantain which is cut down close to the root, its leaves being cut off just below their expansion, after which the fibrous coats are stripped split into 3-inch widths and scraped. The preparation of the hemp for shipment is a slow process, two men manipulating about 25 lbs a day. It takes more than 3,000 plantains

to produce one ton of hemp. Sisal hemp, from Mexico and East Africa, though not so strong as Manila, is in considerable use especially for ropes of small size. New Zealand hemp is obtained from the leaves of a species of lily the yield being 12 to 15 per cent. of clean fibre, against 3 to 5 per cent. of the sisal hemp plant. Another vegetable fibre largely used is coir from the inside of the husk of the cocoanut. This fibre is very short but owing to a natural twist in the yarn it makes excellent ropes possessing extraordinary elasticity and having the additional advantage of being relatively very light. A coir rope or hawser will stretch 40 or 50 per cent., and thus is especially adapted for mooring purposes where there is a heavy range of sea, or where a ship has to lie off the shore while loading or discharging. The elasticity of the coir hawser also recommends it for "springs" in towing cables ensuring the ease of any sudden strain on the steel wire ropes which are now widely used for towing of big vessels. It is further much in favour of a coir rope that sea water improves it. A coir towline 90 fathoms long and 18½ inches round would weigh a little more than 31 cwt. An equivalent tarred hemp rope would have a circumference of 11¾ inches while white Manila doing the same work would need to have only 10 inches. A coir cable of quite exceptional size—47 inches in circumference and containing 3,780 yarns—was used in connection with the launch of the historic *Cent Eastern*.

In some cases ropemakers include in their activities the making of binder twine, trawl twine, patent log lines, sash lines, packing cord, parcel twine, etc. Binder twine is in demand by farmers, and is largely in use in connection with harvesting operations. considerable quantities of it go overseas to the Colonies and foreign countries. One factory with an average annual output of 4,000 tons of a favourite brand of this article last year exported 1,500 tons of it to the Canadian market alone. Trawl or fishing twine is made by special plant from the finest qualities of Manila hemp and knitted by hand into hammocks for our fleets of steam trawlers. These nets are made in sections which have to be joined together and tarred and mounted with the necessary ropes before they are ready for service.

A few words may appropriately be said of Irish activities in the industry under review for to the qualities of Irish made cordage (which is the general term applied to all varieties irrespective of size) the trade owes much of the popularity of its products all over the world. Rope manufacture is not by any means a new industry in North Ireland the first ropewalk having been started in Belfast as long ago as 1768. To-day the town is the chief seat of the manufacture, to it belonging the distinction of possessing the largest and most completely and comprehensively equipped ropeworks in any part of the earth, producing an output of cordage of different sorts of about 18,000 tons per year. The development of the industry in Belfast has synchronised with the extension of shipbuilding in that port. It has become one of the most important industries in the whole province and there are prospects of its even greater growth.

To realise how useful a part the cordage manufacturer plays in the world it is only necessary to reflect for a moment on what a ropeless and stringless civilisation would be like.

The making of metallic wire ropes is a separate industry. The first British patent for manufacturing these—of iron or steel wire—was taken out in 1840 but at the beginning of the 19th century iron wire ropes were used in the construction of a suspension bridge at Geneva. For centuries before this the art appears to have been a lost one but that it was known by the ancients is proved by the fact that an excellent specimen of brass wire rope made by the Ninivites some 800 years B.C., and found at Pompeii, is exhibited at the Naples museum.

BRITISH GRANITE QUARRIES.

By H. J. GRACE.

GRANITE primarily consists of quartz and orthoclase, biotite, muscovite, hornblende, augite and is holocrystalline. Other minerals entering into its composition are plagioclase feldspar, oxides of iron, apatite, zircon, garnet, epidote, cordierite, sphene, topaz and tinestone. Calcite, limonite, kaolin and chlorite being among the resultant products of decomposition. Commercially, the term "granites" covers products that evade the strictly correct geological definition such as syenites, diorites, granophyres, gabbros, greenstones, and in some cases grits.

Aberdeen quarries yield a true and distinctive granite. Peterhead, Kemnay, Dalbeattie, Cree town and Ross of Mull being other deservedly renowned centres of the industry.

In England, Leicestershire, Cornwall, Cumberland and Westmorland are rich in areas of supply. Warwickshire also possesses local sources. Wales has large areas extensively worked in Carnarvonshire. Ireland has a considerable supply in several districts, notably in Newry. The Channel Islands produce a large quantity of material and the Isle of Man has an extensive area, but difficulties of transport hinder the development of the Manx industry.

The first step in the opening of any quarry is the removal of the top soil, or overburden, after which lifts or levels are excavated of varying depths. The accumulation of spring and surface water during the operation of sinking, and afterwards, necessitates almost continuous pumping where the quarries are worked in excavations or pits. The granite having been bored, the faces are divided into motions, averaging usually about 10 yards in width up to about 20 yards with a set of men to each motion. Preparatory to blasting holes are drilled into the rock by hand or by means of steam drilling machines, the customary depth being from 10 to 12 feet, the deepest about 20 feet, with a top diameter of $3\frac{1}{2}$ to 4 inches. As a rule two to four charges are necessary, the first being so regulated as to be only sufficiently powerful to spring the rocks—that is, to loosen and open out their joints—the final stronger charge completing the work. Stones that remain unworkably large after the explosion are separately bored, charged with blasting powder, and reduced in size. Blocks intended for sundry specific purposes are roughly dressed below, prior to their removal to the surface for monumental, building, kerb or sett-making purposes and for the crushing or breaking mills. The carriage of the deposits to these mills is facilitated by tram lines and effected by horse and mechanical power. In some instances the most up-to-date quarries have successfully adopted for this haulage an aerial power worked cableway of extraordinarily ingenious design, the system being suggestively

known as the Blondin. Steel skips carried along this cableway have each a loading capacity of 50 cwt. and upwards. With clock-like regularity these receptacles are lowered empty, hauled up full, run swiftly overhead to the crushers, into the hoppers of which their contents are deposited, and then return to their starting place, to be again lowered and refilled. In the crushing mills the stones pass through breakers into rollers falling into elevators and then into screens, which sort out the different sizes, rejections, or tailings, being recrushed.

In the dressing of stones for setts, kerbs, etc., the first or preparatory stage is carried out on the floor of the quarry, where the blockmakers shape them into the rough form in which they reach the settmakers and kerbdressers above. These settmakers exercise a wonderfully accurate judgment in deciding at sight how each block will shape best and with least waste under their hands. Into this judged shape it is wrought by heavy hammers, lighter ones being substituted for the finishing touches. For kerbmaking much larger blocks are used, the dressers wielding a variety of tools. For certain purposes, such as "Durax" setts, a stone splitting machine of Danish invention, in the working of which a movement of the foot controls the action of steam hammers, has proved serviceable. The bursting of big stones of a size otherwise unwieldy has also to be accomplished by hand. An expert, with a sharp heavy hammer, nicks the line of fracture in about the centre, then draws the great block by striking it smartly at one end. After a varying number of blows it severs at the line made by nicking. Stones still larger are divided by what is known as the plug and feather process, the largest of all are drilled and blasted when the former process would be ineffectual. A trade is carried on in block or unbroken granite for breaking by hand on roads and in workhouses.

The latest available returns are those for 1922, in which year the production of igneous rocks in England was 2,999,485 tons. Scotland 1,761,007; Wales 1,118,255; Isle of Man 49,127, total, 5,927,864 tons against 5,740,014 in 1921. Feldspar, felsite and felstone (55,605 tons) are excluded, 1921 figures for these being 39,244 tons. Total production of limestone in Great Britain, excluding calc spar (6,453 tons), was 9,418,678 tons against 7,335,882 in 1921, including calc spar 1,798 tons. Foregoing figures apply to all workings except those of under 20 feet in depth. Irish returns, which in 1921 were 277,868 tons igneous rocks and 95,246 limestone, are not included.

The official returns for 1922 accounted for 2,235 tons of manufactured and 47 tons of rough granite exported, and 84,435 tons of manufactured and 449,267 tons of rough imported.

WOOLLEN INDUSTRIES.

THE processes of spinning and weaving wool were introduced into the British Isles by the Romans and native woollens early established a Continental reputation which endured through the Middle Ages, becoming at length only less highly esteemed than those of Spain, the home of the famous merino sheep, developed from the strain originally brought into the Peninsula by the Moors. Owing much from time to time to the knowledge and skill of Flemish refugees the trade became the most important staple industry of England and the source of its prosperity. Tradition has it that the woolsack of the Lord Chancellor was first installed as a symbol of wool's vital value as a national asset. Edward III—who did much to encourage the industry, including weavers, dyers, and fullers to settle in England from Flanders—was among the monarchs who mistakenly forbade the exportation of wool in any form. In practice the policy of non-exportation injured where it was intended to benefit. Production greatly exceeded home consumption, prices of the raw material fell, smuggling was systematised, and the business thrown generally out of gear. Abrogated the law forbidding exportation was enacted in 1660, and not finally repealed until 1825.

At times strange devices were resorted to with the object of increasing and enforcing the use of woollen manufactures. In the reign of Charles II, for instance, it was decreed that all corpses should be buried in woollen shrouds—a law nominally operative for 120 years. Development of technical skill, particularly during the reign of Edward III and again of James I, synchronised with a movement to increase the range and bulk of home manufactures and limit exportation to woven cloth. At one period the right of sending woollen cloth abroad was granted to the City of London as an exclusive privilege.

The Colonial developments of the seventeenth, eighteenth and nineteenth centuries, with the invention of the spinning frame and power loom, supplied an impetus that carried the trade far and quickly ahead. No branch of British commerce has more closely "followed the flag of Empire. Colonial expansion, broadly speaking, has had the two-fold effect of widening the areas of supply of the raw material and multiplying our markets for the manufactured article.

A hundred years ago the value of the woollen yarns and piece goods distributed from the manufacturing centres of Great Britain and Ireland was about £17,000,000, as against an average of about £25,000,000 of later years.

The chief overseas sources of supply of raw wool are Australia, New Zealand, South America, South Africa, and India. China, Persia, Russia, Turkey, Egypt, North Africa, Spain, Portugal and other countries also figuring on the list, even Iceland contributing a quota. The supplies from the East are considerable.

The importation into Australasia of Lincoln, Leicester and Shropshire sheep for interbreeding with the merino fine wool sheep on which the Australian exporters were before solely dependent has resulted to advantage in the production of a variety known as Colonial crossbreed wool. To naturalised English stock too, the Argentine owes a long wool variety resembling the English long wool.

The principal home produced varieties are classified as lustre, demi lustre, and short, the races of sheep associated with each class each thriving in its own tract and each preserving its racial characteristics, improvements long standardised having been effected by scientific crossing. Scottish long rough wool is in demand for carpet making. Welsh wool, which in washing shrinks practically to its limit of shrinkage, is in favour for flannels.

Woollen textiles are divided into three general classes of fabric, in the manufacture of which three principles are operative—the woollen, worsted and "stuffs"—and to a great extent these principles are localized in practice. At one time the famous products of the West of England and parts of Scotland were almost wholly those of the first named principle, the output to-day being much more varied. While re-manufactured materials, cotton "sweepings" and "fud" and "flocks"—the wastes in the manufacture of woollens and worsteds—are used in the making of the cheap cloths of Batley, Dewsbury and the Yeadon districts in Yorkshire, nothing but the genuine material at its best enters into the composition of the best cloths of the "West Country" and certain defined Scottish areas. Leeds and its districts adhere in the main to the woollen principle, Huddersfield to the worsted, and Bradford to the stuffs. But both Bradford and Leeds make worsted fabrics in large quantities, and Huddersfield working in part on the woollen principle turns out cloths with both woollen and worsted properties. The woollen differs from the worsted principle in the construction of the yarn (thread) or the arrangement of the fibres of which the threads are composed. In the "stuffs" trade cotton warps are the rule, though warps of worsted wool, silk and linen are also in use, the wefts being usually of Botany (the original Australian variety) and English wool, mohair and silk.

During the end of the sixteenth century Irish woollen imports into England were prohibited, and, referring to this prohibition, Lecky describes native Irish wool (in his *History of Ireland in the Eighteenth Century*) as "supremely good." It is to be hoped that under the auspices of the Irish Government steps will be taken for improving the sheep of the country. At present the wools used by the Irish mills are principally Shropshires, Leicesters, Crossbreds, Blackfaced Mountain, and their products from these of Saxony worsted suitings and serges have a deservedly high reputation, while their chevots and costume cloths are in great favour in Great Britain, France and other European countries. The United States of America have also been large buyers, but it is feared that the new American tariff will continue to be prohibitive for all except perhaps the highest grades of Botany goods. Irish woollens have a closer general affinity with those of Scotland than those of England. The abundant supply of water power available in the country is in its favour, and important developments of the Irish woollen trade are anticipated.

British woollen industries remained the capital source of national wealth until the development of the cotton trade towards the close of the eighteenth century.

VELVET AND CORDUROY INDUSTRY.

OF all the many subdivisions of the Lancashire cotton industry that concerned with the production of velvets and corduroys, summed up formerly under the heading of fustians, may claim to be amongst the oldest. Velvet—one of the most ancient fabrics in history—was produced by the Chinese, probably from cotton, long before the Christian Era.

With other textile arts, this made its way slowly across the continent of Asia more civilised in those remote times than now, and in the clash of East and West during the spacious times of the great Crusades these arts touched the undeveloped western world.

Persia, in her great days, took her share in velvet development, and the influence of Persian design on figured and woven velvet is traceable.

The trading activities of the Venetian Republic linked up Persia and the Levant with the counties beyond the Pillars of Hercules, but the space of this article does not permit of more than a brief mention of the movement of the textile arts through Genoa, France, Flanders and the Spanish Netherlands to Lancashire and Manchester.

Fustian, probably of Egyptian derivation, is the parent of modern cotton velvet, and in mediæval England was the wear of the serving man, whilst people of quality wore velvet. Originally made from the coarse wool of the country, combined with linen warps from Ireland, it was by the 17th century being manufactured from cotton, then newly imported from the Levant, and it is chronicled that Manchester had a considerable export of these goods to the Continent and America. From this parent fabric were velvet and corduroy evolved. Fustian however, remains the family name covering all classes of cotton pile fabrics: velveteens, cords, moleskins, beaver-teens, imperials, diagonals, &c.

Many highly specialised processes are necessary to convert the raw material into the beautiful finished article as seen in an outdoor costume or evening gown in Regent Street or the Champs Elysées.

The grey material is woven in Oldham, Preston, Bolton and East Lancashire and then centralised in Manchester, where the merchant arranges the various processes contributing to the successful production of the finished velvet or corduroy. To make velvet successfully, nothing but the best material must be used—fine Egyptian yarn for strength in the warp and for the soft silky American suitably spun to give the velvety touch. So far velvet as it comes from the loom, is hardly distinguishable from plain cotton cloth. The next stage and of one of the most important, consists in forming the pile.

After preparatory stiffening and liming, this operation, calling for much manual dexterity, consists in opening up the fine longitudinal tunnels, or "rares," into which the cloth is woven by means of a fine steel knife, sheathed in a long, finely pointed guide, which opens up the rare, enabling the sharp edge of the knife to sever the top of the tunnel, leaving the walls, as

it were, of tufts of pile standing. These tufts form the velvet.

Indifferent weaving, or poor material in the shape of low grade cotton, would result in imperfections which would deflect the knife and damage would result.

The problem of cutting velvet pile by machinery was unsuccessfully attacked by many inventors in the last century, but in recent times one or two effective cutting machines have been introduced, and whilst the bulk of the work is still done by hand, a well designed machine has a great future before it. Cords have long been cut by machinery of an entirely different design.

The pile is next prepared by brushing, dressing and singeing to give it a smooth, even surface, preparatory to bleaching and dyeing. The Fast Dye is now a necessary accompaniment of good quality velvet and after dyeing, a beautiful finish is applied to the fabric, giving it a high degree of lustre and richness.

Much is being done to develop the "Fast to Light" dye in velvet fabrics and for house decoration this process is invaluable.

Beautiful styles are produced in figured, printed, striped and brocaded velvets, as also in acid printing and with shot effects.

Velvet supplies such diverse uses as ribbons, trimmings, elegant footwear, juvenile clothing.

Corduroy may be briefly described as velvet made with coarser, cheaper yarns, in stripes or ribs of almost infinite variety—from the very fine thickset to the wide cable cord. A well proved article of great utility it gives endless wear and satisfaction to its world wide users, including the agriculturist, the navy, the iron worker, the constructional gangs of North America, the South African farmer, the Australian stockman, and other workers. During the war the British and Allied War Departments discovered that corduroy was a material unequalled for hard wear in the labour battalions.

For juvenile clothing velvet and corduroy give unequalled results, and in the home furniture manufacturers and upholsterers have wide scope for the fast dyed velvet and corduroy in house adornment.

Some approach to stabilisation of the deplorable exchanges would permit of the re-opening of many outlets which velvets and corduroys found in the settled times before the Great War.

Meanwhile competition in the restricted markets tends to lower the quality of the article by the employment of unsuitable material and inferior dyes, and the necessity of keeping up the standard of quality for which Manchester was famous cannot be too strongly stressed. The buyer can make himself secure on these points by insisting on purchasing and employing one of the well known branded qualities on the market.

At the forthcoming British Empire Exhibition at Wembley overseas buyers and others will have an opportunity of inspecting velvet fabrics, comprehensively displayed, and of seeing for themselves what is being done in this ancient industry.

SHIRT AND COLLAR MAKING.

THE comfort of a well made well fitting shirt is best appreciated by those whose misfortune it has ever been to wear an ill made, ill fitting one. To ensure the former characteristics, there are still fastidious men who get measured for their shirts as they get measured for their coats, but to do so is quite unnecessary, for first class factory shirts, made to standard sizes, are as comfortable as any which are made to measure. In their manufacture in all reputable establishments the same meticulous care is taken at every stage irrespective of the nature or quality of the material employed be it cotton, linen, flannel, silk, imitation silk or mercerised cotton 'zephyr', or a combination of cotton and wool.

The first step is to mark out on the material the different parts of the shape of the intended garment in all its dimensions. Exactly to the lines delineated the shape is cut by electric cutters, guided by skilled hands. The making is technically the process of joining the pieces together, for the smooth seams two needle sewing machines being employed. Trimmings are added in the form of neck and wrist bands, and in the case of dress shirts the fronts, and for the formation of buttonholes at one complete operation another machine of great ingenuity is used. Before being sent to the laundry every shirt is critically examined by specialists any flaw detected, however slight, entailing its rejection. It is the duty of the examiners to see to it not only that each garment is perfectly made but that it is in conformity with the prevalent taste in the particular part of the world which is to be its ultimate destination, for 'tastes vary even in the matter of shirts. By residents in some regions an ampler or other different cut of the lower part is preferred than is in favour with men in another region.

In the laundry where the processes of washing, drying, starching, and ironing are conducted, a scrupulous re-examination takes place subject to which the articles are ready for dispatch to the warehouse.

Similar methods and principles apply to the manufacture of pyjamas which have to a considerable extent supplanted the older-fashioned night shirt.

The making of a collar involves many more processes than, from the smallness of its size, might be supposed, the higher priced varieties going through as many as twenty-eight different operations. Every 'single collar is in four parts (two outside and two interlinings) most 'double ones in seven parts and each part is separately dealt with. The least expensive collar is that of cotton, the most expensive that of linen. In between comes the collar made of cotton with a linen facing.

The design having been pencilled on the cloth according to an iron or zinc model (iron for the shapes most frequently used, as being less liable to wear and deviation) the cutting out is accomplished in either of two ways—by hand or by machinery. Cutting by hand is a work of highly trained skill and much delicacy and dexterity. Cutting by machinery is done by means of rapidly revolving power band knives making hundreds

of revolutions per minute. The material on which they operate is folded into certain lengths, these lengths being piled one above another, and from each fold a large number of parts are cut to pattern. Great skill is also required by the operators of the hand knives, and much art and care have to be exercised to avoid waste as the loss of a few inches on each cutting would result in a considerable loss.

The shapes and styles of collars are many double and single. Of the former, the top is either three fold or four fold according to the requirements of the particular customer for whom they are being made, and the band is four fold. These folds are assembled and prepared for the stitcher by heated irons, the edges being turned over by means of shapes or dies so that an absolutely correct shape is formed according to the required design.

In the meantime one of the plys that form the band has been sent to the stamper to have the name, shape, size and depth put on in special ink, and after this the folds are run together and turned. Top and band being now ready for the machinist they are deftly and quickly stitched together by neat rows of thread by machines capable of 3 000 stitches per minute. Button holing follows a machine capable of 1 600 operations a minute cutting the hole, seaming it and clipping off the end of the thread, simultaneously and almost instantaneously. Similarly treated is the single collar of which—in one variety—the crucial point is the 'wings. Great pains are taken that there should be no variation in the 'roundness of the round' and the 'squareness of the square, for both wings must be uniform, and the least deviation would mar the effect.

The last stage is reached in the laundry which the stainless and smoothened goods leave with a pure white finish. Before the final processes in this department every collar has had to pass through a minute inspection in the examining room.

Shirt making and collar making are allied industries. In them, as in so many other industries, the leading position of Great Britain is demonstrated by the fact that the reputation of British shirts and British collars is literally world wide. The export trade in them extends to every part of the earth. The name of a British firm of good standing on either article is a guarantee not only that it is the product of the most modern scientific mechanism and consummate human skill but that it has been made in the purest hygienic conditions—conditions that safeguard the health of the workers and protect their work from all danger of contamination.

Enlogiums of a like sort apply to another industry which is sometimes carried on in the same factory—that of tie making. Of every shape and pattern and of divers materials, British ties are worn in many countries besides the land of their origin. Every mechanical device that can assist or improve the work of trained hands is available, and on the artistic side experts in form and colour bring to bear the benefit of their judgment and experience.

SEEDS INDUSTRY.

THE culture of seeds is an industry of both vital national concern and of individual interest. In one ramification or another it is a factor in the life of each and the lives of all. On an adequate and well-conditioned supply of agricultural and vegetable seeds depends the adequate and healthy supply of essential foods, thanks alone to the availability of flower seeds any man, however poor, can grow his own little Eden, by grass seeds bare wastes are transformed into green pastures rich with sustenance, lawns that delight the eye are created and maintained, spaces are carpeted that serve the ends of pleasant recreation and beneficial exercise. Royal appreciation of the importance of the subject under brief review has been twice signified in our time, the visit of their Majesties King George and Queen Mary to the Royal Seed Establishment at Reading in 1918 having been preceded by a visit there of his august father when Prince of Wales, the public interest these visits aroused reflecting the interest in seed culture of all classes of the community.

For long the commerce in seeds lacked system and organisation, and many abuses flourished. Adulteration was the rule. Mechanical means were in use for killing the vitality of cheap seeds without affecting their appearance, guarantees being offered by the owners of the mechanisms that not a single seed subjected to the process could by subsequent germination betray the fraud in which it was to be an item. These killed cheap seeds were mixed and sold with dear seeds of a different species but of similar form and colour. For instance, killed rape at threepence a pound was mixed with cabbage, broccoli and other round seeds worth many shillings a pound. In the early years of last century the scandal of this and other malpractices became so great that an agitation was set afoot which resulted in a commission of inquiry, and ultimately to the passing of the Seeds Adulteration Act.

If genius be an infinite capacity for taking pains seed culturers on a commercial scale are a race of geniuses, for in almost every detail of their work at its every stage meticulous care must be exercised, in conjunction with exhaustive knowledge and experienced judgment, which without pains taking would be wasted. They have to deal with numerous species and innumerable varieties of each. To illustrate the multiplicity of varieties in floriculture alone, of asters there are more than two hundred, of stocks almost as many, and of sweet peas at least one hundred and seventy, other species being equally diversified. This prodigality of variation is by no means confined to flower species. The ordinary person knows of only

one sort of blackberry—some few years ago four hundred new varieties were discovered in China. It is noteworthy that the tendency of varieties to revert to their original type, which all breeders of live-stock have observed, is equally persistent in the vegetable kingdom. The fertile seed of a variety germinates to species, but not with any degree of certainty to its own variety of that species. The peculiarities of varieties are perpetuated by other means.

In such qualities and characteristics as the longevity of their vitality, the duration of the period of germination, and their hardihood (there are some not injuriously affected by either boiling or freezing) the seeds of different species are in extreme contrast, but the conditions required for germination are in principle the same—exposure to moisture and a certain quantity of heat, communication with the atmosphere being also necessary for the maintenance of a healthy state. A seed, when fully ripe, contains a larger proportion of carbon than any other living part, and so long as it is thus charged with carbon it cannot grow. The only means of ridding itself of this element, essential to its preservation but an impediment to its development, is in the conversion of the carbon into carbonic acid, for which a supply of oxygen is necessary. This it procures from the water absorbed in germination, fixing hydrogen, the other element of water, in its tissue. With the carbonic acid thus formed it parts by means of its respiratory organs, until the proportion of fixed carbon is lowered to the amount suited to its growth.

The typical Seed Establishment of to-day is a colony of experts. Growing on their own lands for the sake and purpose of seed harvesting, the cultivators are sponsors for their produce when it passes into the hands of growers for other purposes. Farm seeds, grass seeds, garden and kitchen garden seeds must all be tested, the unfit and the unlikely be eliminated, means must be taken to preserve pedigree stocks from extinction or decadence. All this entails scientific, costly and elaborate equipments in some departments and an unerring discrimination and ceaseless watchfulness in all.

Since the reform and consolidation of the seed industry more than a hundred years ago, its history has been one of continuous extension and development. It has been, and is, importantly influential in advancing British interests at home and overseas, its export returns running into big figures, even in this age of big figures. British-grown seeds are in preferential demand all over the world. A feature of the trade is that the smallest customer may buy direct from the largest producers.

THE PIANO AND GRAMOPHONE INDUSTRY.

WHILST the following notes relate more especially to the piano and its up-to-date prototype, the player piano, they are also applicable to the gramophone which, not wholly without justification so far as the better types are concerned, has acquired the status of a musical instrument, and cannot be separated from any review of the musical instrument industry.

The past three years have probably been the most difficult period which the British musical instrument trade has ever been called upon to face, and records at least the failure of one eminent house.

That this depression has been less due to conditions peculiar to the trade than to those which equally affected other British industries is the only satisfactory feature to record. Summarised, these conditions have been—

(1) Limitation of home demand as a result of excessive taxation

(2) Heavy decreases in values of stock

(3) Inability, mainly due to exchange disparities, to trade in the foreign markets

(4) German competition

The latter is placed last because, whilst the threat of German competition bulks largely in the popular eye, it has yet to be demonstrated that, save in the cheapest grade of goods, the German makers can redress the disadvantages of the present tariff and at the same time give a greater value than the British maker. For them to do so will become increasingly difficult as the value of their currency tends to rise.

Labour conditions have become more satisfactory, the Trade Unions concerned wisely acquiescing in the reduction of a wage which was severely hampering the trade. Due to this and other reasons,

prices fell considerably during 1923, and to day may be regarded as having become stabilized, an important consideration for the purchaser.

During the past year a most important development has occurred in connection with the player piano. Emanating from America, but delayed in this country by the war, the reproducing piano has practically superseded the earlier and more mechanical type of instrument, whilst offering the same facilities for playing by hand and by music-roll as the player piano. This instrument also exactly reproduces the characteristic playing of the most eminent pianists. Its powers were strikingly evinced at a concert held at Queen's Hall, where a reproducing model of the "Pianola" Piano, accompanied by the Queen's Hall Orchestra, under the direction of Sir Henry J. Wood, played Harold Bauer's interpretation of Saint Saens' Piano-forte Concerto in G minor, and subsequently accompanied Miss Carrie Tubb in several vocal numbers and William Murdoch in a piano-forte duet. It seems likely that in course of time this instrument is destined to replace both the piano and player piano.

The gramophone has benefited by the great amount of research work devoted to sound reproduction in recent years, and whilst its evolution may not yet be so complete as that of the piano, an extraordinary degree of excellence has been reached in the best makes. A new competitor to the gramophone recently arose in the form of wireless receiving sets, but, except in early days of the "boom," no appreciable diminution in the sale of gramophones and records was felt. Several manufacturers of musical instruments have embarked in this new business, but it cannot be said that the wireless industry has yet justified the predictions of its supporters.

Paderewski says:

"I welcome the opportunity to advise the general adoption of the instrument known as the 'Duo-Art,' and when he entrusts his whole reputation to this instrument by recording exclusively for it, you must realise that the "Duo-Art" stands in a class distinct from any other piano-playing instrument

Ignace Paderewski

The "Duo-Art"

REPRODUCING PIANO

reproduces the actual playing of
the great pianists.

Suppose you owned a piano on which Paderewski had played the great masterpieces of music—compositions of Liszt, Chopin, Beethoven and the other immortal composers. And suppose that in your own home, whenever you desired, this miraculous instrument would repeat these performances as the master himself played them

This is precisely what the "Duo Art Piano" does. It reproduces the playing of Paderewski—and not Paderewski alone, but all the other great pianists—and does it with absolute fidelity. Every element of tone, technique and expression is preserved, giving you a perfect reproduction of the artist's original performance.

The "Duo-Art" Piano is also a "Pianola," and as such it endows you with the ability to play yourself and express your own ideas of interpretation.

And, finally, it is a piano for ordinary hand-playing. There are three different pianos made as "Duo-Arts"—the Steinway, Weber and Steck. Each of these is the leading instrument in its class.

Aeolian Hall, New Bond Street, W. 1.

THE BISCUIT INDUSTRY.

"BISCUIT" being, lexicographically, dough twice baked, the making of biscuits is—in the indicated sense—probably older than civilisation, but as applied to the modern commodity with which we feed our selves and the world, the word itself is by way of being a misnomer, for only one of the articles very numerous varieties—the rusk—goes a second time into the oven. The cracknel, however, is twice "cooked," being boiled before it is baked, and the cracknel is the oldest biscuit known by a distinctive name. It is mentioned in 1 Kings, xiv 3 "and take with thee ten loaves and cracknels." Biscuits have always been made, but it was only their comparatively recent manufacture by machinery that elevated biscuit making to the status of a great industry. It is an industry in which British supremacy is undisputed and indisputable. We make far more, and incomparably better, than any other country. The British biscuit is ubiquitous. A curious instance of its "peaceful" penetration into the least likely regions was mentioned by the commander of the British troops who entered Lhasa in 1904. In this sealed city of Tibet (in which, it is said, only one white man had ever been before) he was offered a biscuit made in Reading—where is situated the first built and largest biscuit factory in the world. This ancient English town having been selected as its location partly because of its nearness to the finest and most suitable wheat growing areas.

The magnitude of the modern British Industry of biscuit manufacture represents, as already implied, an instance of rapid development, for its beginning synchronised with the cheapening in price and increase in quantity of flour and sugar that resulted from legislative action and other causes not longer ago than some eighty years. The invention and adoption of scientific mechanism being coincident. The primitive methods this mechanism superseded would generations ago have proved hopelessly inadequate and to reflect on what a comparatively biscuitless England would now mean to us is to realise that of a truth the pioneer of the new system did "the State some service" to draw imaginary lines from the site of the works he established to the overseas sources from which they are to-day supplied with rice, mace, currants, sultanas and other fruits, almonds, nuts, spices, gingers—not to enumerate other ingredients of utility and luxury which enter into the composition of some of the products of any typical biscuit factory to-day, the making of cakes usually being combined with the making of biscuits—is to realise that the trade has played an important part in the promotion and consolidation of British commercial interests in our colonies and protectorates and in every civilised country, while at home it has permanently and expansively enlarged the market for British flour, British dairy produce and British eggs, increasing in addition the demand for timber and metal for the construction of packing-cases and tins, and of other goods for divers purposes.

Detailed statistical particulars would be bewildering rather than enlightening where so many items are involved, but the following facts will be sufficiently suggestive. The returns of the Great Western, London and South Western,

and South Eastern Railways show that the output of biscuits and cakes from one factory alone, and the delivery of materials for their manufacture, require annually more than 62,000 railway trucks.

In the beginning the export trade in biscuits owed much to the great Crystal Palace Exhibition of 1851, which was a means of spreading the knowledge of the proved superiority of the British comestible. Similar results followed other International Exhibitions—notably the Great Paris Exhibition of 1878.

To witness the process of manufacture in an English factory of the first class is to discern why the British biscuit has won the reputation it can never lose while those processes are conducted as they always have been and are to-day. In themselves, accomplished by the operation of the most ingenious machinery, supplemented by the labour of thousands of skilled hands, they are simple, but at every stage of each the most meticulous care is exercised, the most elaborate pains are taken to ensure that each finished article is individually flawless and faultless. The absence of any adulterant is not enough—every ingredient separately examined, scrupulously tested, must be not only good but the best, not only pure but the purest, and free from acquired as well as native defect. As illustrative of the precautions taken, two examples will serve. The scrutiny of currants is so close that each currant out of millions of currants comes under it, and the methods by which they are cleansed and freed from even the tiniest of stalks, and the smallest specks of dirt and dust, occupy 36 hours. Each egg out of millions of eggs is twice tested—first by electric light, unbroken, and then after it is broken. In composition, taste, size, shape and price the differences are many and great, but in the preparation of all descriptions, and in every department, the same rigidity of principle is strictly observed.

This high standard was originally set by the first firm to transform biscuit making from a casual occupation into an organised manufacturing enterprise of national and international service and importance. Consistently adhered to, it has become the accepted standard, and helped to put a reality of meaning into the familiar phrase "British and best."

It remains to refer to the dietetic value of the biscuit, which is greatly enhanced by the variety of its classifications. It is at once a food and a delicacy, a meal and a tit-bit, and in at least one form has medicinal virtues. It satisfies the hunger of the robust and tempts the appetite of the sick and convalescent. From the commissariat of no expedition is it ever omitted—it has helped to sustain life in Arctic cold and Tropics heat. During the Great War vast quantities were especially made for our soldiers on all the fronts and our sailors on all the seas. It is nourishment in the handiest and most portable of forms, and differs from many concentrated foods in that each one of its constituents has a dietetic value of its own, besides the value of them all in combination.

Although the ship or cabin biscuit is no longer the necessity that it used to be, no vessel ever sets sail biscuitless. It is a truism that trade follows the flag—the British biscuit goes with it.

BY APPOINTMENT

IN the science of economy there is an axiom that the best is the cheapest.

¶ Huntley & Palmers biscuits cost you no more than inferior kinds, yet their superiority is beyond all question

¶ They are manufactured of only the purest materials, under conditions of most exceptional cleanliness, in buildings which are models of sanitation

¶ By these methods, practised consistently for over ninety years, Huntley & Palmers have won their great reputation

¶ The millions who, in every quarter of the world, daily enjoy Huntley & Palmers biscuits need fear no modification of their quality

¶ Those who have yet to try them may do so with confidence

Huntley & Palmers Ltd.

London

THE BRITISH PENCIL INDUSTRY.

By G. H. MEADMORE

THE manufacture of lead pencils in similar form to the familiar article of to-day dates from a period immediately following the discovery of the once famous Borrowdale mine situated a few miles from Keswick, in Cumberland in the year 1564. At a much earlier period metallic lead was used for marking on parchment paper or other material and it is doubtless owing to the earlier use of this substance that the erroneous term "black lead" has been applied to plumbago or graphite.

The history of the lead pencil for nearly three centuries is closely associated with the fortunes of this mine and it is probable that in no other part of the world has similar graphite been found equal to that found there. Analyses however which have been taken of the Borrowdale graphite show that it was not of exceptional purity but it was the physical condition in which it occurred that gave it its value for pencils. The product was in such great demand and was so closely maintained as a monopoly that in pursuance of an Act of Parliament the mouth of the mine was guarded by an armed force and to maintain the monopoly and conserve the supply the mine was only worked during six weeks in each year. To prevent pilfering the mine was closed by flooding. The graphite was sold by public auction in London, and for many years the Cumberland mines were probably the only source of supply for pencil making. The graphite was used in its natural state being cut or sawn into rectangular sticks and enclosed in their wooden casing. This method was not economic and towards the close of the 18th century when the deposits began to show signs of exhaustion and also during the early part of the 19th century efforts were made to discover a means by which the waste which had accumulated in the factories and the residue from the mine could be utilised. Pulverisation with the addition of a binding medium such as glue, isinglass or gum, was tried but without marked success, and was eventually abandoned in favour of the process originated by Conté a French chemist in 1796. By this process finely-ground graphite is mixed with clay formed into strips, and baked. This invention marks the most important step in the manufacture of the modern pencil and is the process now in universal use.

Graphite of which there are two distinct types, viz., foliate or crystalline and compact or amorphous, has since been found in many parts of the world, but that mostly used by the pencil manufacturer comes from Mexico. Foliate graphite is difficult to grind to the required fineness and is less brilliant in colour than the amorphous, which on the other hand can be ground to a gritless fineness, and is of a nature which combines readily with other materials.

The manufacture of modern pencils requires great technical knowledge combined with practical experience and involves a large number of operations. The graphite, which has already been prepared at the mines, is mixed with clay in a dry state, then moistened and milled to the requisite fineness. Filter presses free the "batch" from an excess of moisture, and it then passes through a series of compressors from the last of which it is extruded through a hole or holes slightly larger than the actual thickness required, to allow for shrinkage, and the "strip" is thus formed. At this stage it

is in plastic form. It is laid out in trays in lengths of about 22 ins., and after drying is ready for baking. The degrees of hardness are primarily obtained by varying the proportions of clay and graphite.

Nearly all high grade pencils are made of cedar wood which owing to its softness, straight grain, and freedom from knots make it peculiarly adapted for this purpose. The red cedar, or pencil cedar belongs to the juniper family being the *Juniperus virginiana* which is found at its best in the south eastern States of the U.S.A. The wood is usually imported in the form of "slats," i.e., strips about 7½ ins. long 3-16ths in. thick and from 2 ply to 6 ply in width, 6 ply being the width of 6 pencils. The slats are grooved coated with glue and the lead strips inserted. Two slats one of which contains the slats are glued together and the blocks thus formed are fed into the shaping machine. This machine cuts a series of semi circular grooves on each side of the blocks, converting them into shaped pencils. The pencils have then to be sand papered, coloured and polished, the ends cleaned and finally stamped and bronzed.

The raw materials employed in the manufacture of coloured pencils are clay wax, and a colouring agent, but the clay is of a softer nature than that used for black pencils. Bohemian clay having this requisite property has in the past been greatly favoured for this purpose, but clay eminently suitable for the purpose exists however in the United Kingdom and British aniline dye suitable for the production of copying ink pencils is now obtainable. As a result of careful research work the technical difficulties in regard to the manufacture of coloured strip have been surmounted, and to-day British copying ink and coloured pencils of high grade including dermatograph pencils for surgical purposes, and pencils for marking on china and glass, are being produced.

The Pencil and Colour Industries are closely allied the pencil manufacturer being dependent on the dye manufacturer for colours often specially produced, and it is this connection which largely contributed towards the pencil industry being so successful in Germany. British manufacturers were obviously well equipped in other respects, and a comparison between British and Continental productions a few years ago would have shown that where any difference existed in favour of foreign productions it was primarily the finish due to colour.

As is well known, one of the greatest industrial developments in the United Kingdom in recent years has taken place in the dye industry, one of the results of which is that United Kingdom pencil manufacturers are no longer dependent on foreign dyes, and the handicaps under which they formerly contended no longer exist.

The industry has rapidly developed and has become of considerable importance in the United Kingdom. The great increase in production has been made possible by the installation of additional machinery of the most modern type, but whilst many processes lend themselves to mechanical production, and whilst from the nature of the commodity the wide use of machinery is imperative, it must not be overlooked that the art of pencil making is one of the old crafts, which has been handed down from father to son for generations.

In spite of the perfection of modern mechanical means of production, craftsmanship is the important factor in the production of the finest qualities and it is owing to the craft of the workers engaged in the industry that to-day British pencils stand supreme.

THE CHEMICAL HAND FIRE EXTINGUISHER.

As far back as it has been possible to trace, the possession of fire and the art of making it have belonged to the vast majority of mankind. Its utility has been appreciated and extended all through the ages until it has become an indispensable part of existence. Its danger when uncontrolled was recognised in very early days and organised efforts made to combat the evil. Trained men with more or less efficient means of throwing water or other liquids to a distance were fully organised in Roman and pre Roman times. These organised fire-extinguishing bands have developed into our modern Fire Brigades with their magnificent equipment. The need of such organised efforts has been illustrated again and again by conflagrations which have caused widespread disaster. In the classics we have the burning of Troy and Carthage, and the famous satisfaction of the Emperor Nero's madness in the destruction of Rome. Later, we read of great fires in London in the eleventh and thirteenth centuries, and the Great Fire of 1666. In 1812 Moscow was burned, the loss amounting to £80,000,000. In 1871 the Communist outrages caused losses to the extent of £82,000,000, in the same year the loss through the Chicago fire amounted to £39,000,000, and some thirty years later this town lost 600 lives in a fire at the Iroquois Theatre. The year following, Baltimore and Toronto suffered terrible losses through fire. These are a few of the startling catastrophes which shock humanity. If the daily loss of life and property resulting from fire could be presented in total figures for one year it is highly probable the shock would be equally great. At a recent conference of the Professional Fire Brigades Association a Chief Officer remarked that it was not generally recognised to how great a total the fire losses in Great Britain amounted. During the year 1921 the financial forfeit was about £10,000,000 and an insurance did not cover it. He emphasised the fact of the national importance of efficiency in connection with fire fighting and preventive devices, and that such efficiency demanded that a fire should be put out not washed out, and that the least possible amount of water damage should be incurred. He further stated that the country could not afford the huge losses at present sustained.

Although a fire affects a certain number of individuals directly, it is bound to affect a very large number indirectly in numerous ways which are apparent when a little thought is given to the subject. Outbreaks of fire cannot be absolutely prevented, although every possible care may be taken. The causes are too numerous and often beyond human control. Therefore the only remedy is to fight the fire in the earliest possible stages by means which will over come it with the minimum amount of water damage. To this end the Chemical Hand Fire Extinguisher has been brought into existence. The majority of these are based on the principle of the formation of gas as the result of the combination of chemicals, i.e., the production of CO_2 as the result of a mixture of acid and alkali, thus propelling the jet of chemical a serviceable distance, and at the same time, as water is capable of absorbing large quantities of Carbonic Acid Gas, it is carried in the water

to the seat of the fire, and the evaporation of the water liberates the gas. This gas is the enemy of all kinds of combustion, and therefore forms the main factor in the extinguishment of the fire. This principle has been presented in various forms by firms who have realised the possibilities of sales. The foregoing remarks prove the necessity of Fire Protection, but frequently it is not recognised until too late,—insurance is applied for and paid according to policy, reorganisation is started, premises rebuilt and customers re-canvassed—the latter may or may not return to the victim of the fire. Insurance should in no circumstances be depreciated, but it forms very inadequate compensation for the immense amount of worry, loss of trade and loss of treasures incurred, apart from the fact that life may be endangered. When considering a matter with so grave issues at stake, it is essential that the precautions adopted should be adequate to meet requirements in all respects. One of the most vital points to be considered is whether the appliance installed will be found to be effective and in order years hence, as of course it may be many years before the appliance be used. A machine which has deteriorated, or in which the mechanism refuses to act, is worse than useless, as valuable time is wasted in trying to use it. It is also essential that the appliance can be set in action instantly, without the reading of lengthy instructions thus avoiding loss of time and enabling the uninitiated to set the appliance in action. Its weight and construction should enable it to be used by one man alone, and where necessary a size within the capabilities of a woman or even child should be installed. It is a great advantage if the appliance can be used with one hand alone, and of course this cannot be done when a hose is attached to the appliance. A conical appliance, provided the exit is at the apex and the handle is correctly placed, can with the greatest ease be directed where required. A brief examination would satisfy one regarding some of the above necessary qualifications, and a test fire would show whether or not the extinguisher could put out a fire, but this would be no guarantee that the extinguisher would be equally efficient years hence and in the hands of an inexperienced person. The only guarantee which can be accepted with absolute confidence is the actual use of the fire extinguisher after it has been hanging up filled for years and then used by one without instruction. Any firm which makes a claim that its appliance will not deteriorate should be able to produce such evidence from their customers.

As fires give no warning, and have been known to occur on the same premises within a few hours interval, a system of fire protection which is always ready is essential. Therefore it follows that a fire extinguisher must be capable of being easily and quickly refilled, and spare refills should always be at hand. In selecting an appliance it is advisable to give preference to the one that carries with it a continuous system, under the terms of which refills are supplied free after each actual outbreak of fire, appliances are periodically inspected and advice given by experts when desired, provided the above-mentioned qualifications are also included.

FIRES GIVE NO WARNING!

SURGICAL INSTRUMENTS AND APPLIANCES.

NO science and no art has made more marked progress in modern times than the science and art of surgery. This improvement has synchronised with the striking improvement in the instruments and appliances on which, generally speaking, the success of all serious surgical operations is to a large degree dependent. While it is true that the perfection of the implement he wields will not make good a lack of skill on the part of the operator, it is equally true that a faulty instrument may stultify the ability of the most skilful. The work of the maker of surgical instruments and appliances plays a part of vital importance in the work of those who use them, and in their manufacture a knowledge is necessary of the exact purposes they are designed to serve. In number they have greatly increased—for instance, in dentistry all teeth were formerly extracted with one and the same forceps, now a different one is made and in use for different teeth. Operations that were never attempted before have necessitated the making of new instruments, or new forms of old ones.

Surgery having become a science before medicine proper was anything better or more than a superstition, the industry of the manufacture of its necessary tools is one of the most ancient in the history of civilisation. In the oldest Egyptian temples and the oldest of Egyptian obelisks proofs have been found that implements were made for incisions, scarifications and other surgical purposes most likely including amputations, long anterior to the date of the Ebers papyrus—3500 B.C. Lancets, tweezers, uterine specula, catheters, iron rods for cautery, and means for the removal of some forms of cataract, all dating back to the earliest Egyptian times, are to be inspected in a number of museums in various countries. By practitioners in ancient India who probably derived their surgical knowledge from the Greeks, no fewer than 127 instruments, chiefly for cutting and cauterizing, are known to have been used. In Greece surgery had reached a high stage of development before Hippocrates placed medicine on a more rational foundation than it had occupied before his time—in fact, certain modern appliances, such as splints and scientific bandages, appear to have been originally of Hippocrates' invention. The Romans and other ancients adopted all known surgical means and aids. Rome's conquering armies were accompanied by practitioners well equipped with them.

Excavated at Pompeii, there are preserved in Naples about 300 implements of about 60 different kinds—hollow probes (straight, curved and hooked), needles, specula, vaginae, catheters, pincers, cauteries, bistouries, lancets, scissors, etc. Mostly these are made of bronze, but many of the cutting ones are of iron.

The most important characteristic of the appliances and instruments of the surgeon of to-day, from the operating table—itsself a wonder of constructional ingenuity—to dressings and

sponges, is that everything is either aseptic or antiseptic—a fact for which the gratitude of humanity is due to Lord Lister (born 1827)—the pioneer in the only surgical advance worth much notice since the time of Ambroise Pare (1510-1590). Lister's first employment of carbolic paste as a dressing has been followed by the use of sponges as well as outside dressings of sundry preparations of absorbent wool (wool which having been freed from grease, readily absorbs moisture). Nothing merely ornamental or in the way of embellishment is now allowed on any implements, which must all lend themselves to rapid and thorough cleansing.

The discovery of radium, the recognition of the bacteriological properties of the electric light, and the therapeutic use of the forces of electricity have led to the manufacture of various ingenious mechanical appliances. Among these may be mentioned the cystoscope, a long narrow tube, shaped and curved somewhat on the lines of a catheter. At one end are a minute glow lamp and reflector and a small window, its other end is fitted with a lens and connected by a switch with a main current. Other instances are the Filsen lamp and the galvanic cautery—a series of minute points of platinum, with a suitable trigger.

Besides the multitude of instruments and appliances by which operations are effected there are those designed to relieve and cure without the risks and pains of the operation they may make unnecessary. Such dangers and sufferings, in cases of any importance, there must always be. Both are matters of degree but both are inevitable. As regards the latter, there is mental distress in anticipation that no anæsthetic can deaden, and some physical pain subsequently. Then, again, there are appliances for use in cases the nature of which puts an operation out of consideration—such for instance, as those of many cases of hernia, or rupture, for which a truss is worn.

It is a noticeable and, in view of the very large number of men, women and children who, from various causes, are afflicted with hernia, a noteworthy feature of the truss that the ordinary instrument remains to-day in principle and very much in make what it was hundreds and perhaps thousands of years ago—which by no means indicates the impossibility of improvement. As a matter of fact, of quite recent years an article to supersede the old form has been manufactured for which radical and very distinct advantages are claimed.

That the superiority of British-made surgical, medical, dental and veterinary instruments and appliances is appreciated abroad is proved by the existence of an export trade with the Continent and countries far more distant. The latest available returns show that instruments during 1921 were exported to the value of £160,181, and appliances, including trusses and artificial limbs but excluding artificial eyes, to the value of £180,719. These figures are considerably below those for the previous year.

291,000 MEN WOMEN & CHILDREN

OF 12 different nationalities
living in all parts of the world-
testify to the efficiency of
Brooks Rupture Appliance

Every Brooks Appliance is made up specially for the person who is to wear it—it is sent on trial so that you can test it in your own home or at your work. If you do not like the Appliance, you send it back to us and we refund your money.

The Brooks Rupture Appliance does not chafe or hurt, and it cannot be thrown out of position once it is adjusted. There is no metal to touch the flesh. It is comfortable to wear and cannot be detected through the lightest clothing. You can try this Appliance in your own home free by writing to us or to the Agency nearest you, for particulars of our free trial offer.

LETTERPRESS PRINTING.

By J. R. RIDDELL, Principal, London School of Printing.

LETTERPRESS printing the Craft which turned the darkness of the Middle Ages into light and secured the intellectual achievements of the past, and also furnished a sure guarantee of the future is the art of obtaining impressions from relief surfaces such as type and engraved blocks.

It is claimed that the earliest attempts at printing were made in China before the Christian era. It is known that printing from engraved blocks and movable characters was practised in the Celestial Kingdom in the eleventh century when a smith named Pi Shing made movable types, but the large number of characters in the Chinese alphabet made the invention practically useless. Books printed from blocks were published in China and Korea as early as 922; these are said to be still in existence. In the British Museum there is a copy of a Chinese Encyclopedia printed from movable types in the year 1837.

There is no actual certainty of the date of the invention of printing from movable types but it is assumed it took place about 1440. Certain Letters of Indulgence are the first known documents to have been printed by this method. These were issued from a press at Mainz and bear the date 1454.

The first book printed in English was *The Recuyell of the Histories of Troye* partly printed at Bruges about 1477 by William Caxton the first English printer who set up his Press at Westminster in 1476.

The art of producing metal types is a very exacting one calling for great accuracy and skill not only in the designing of the letters and cutting of the punches but also in the casting of the individual letters. The unit of type measurement is the *point* which is equal to $\frac{1}{24}$ of a pica em, or the sixth of an inch. The height of type is 9.18 in. or approximately the diameter of a shilling. Founts of type which are of varying weights and sizes are supplied to the printer in recognised proportions of characters, i.e. signs and spaces and are based on the number of A's in the fount.

In the actual production of letterpress printing there are two main operations the setting up of the type by the compositor and the printing of the type on the sheet of paper by the pressman or machine manager.

COMPOSING

In hand composition the compositor stands in front of a frame on which is placed a tray called a *case*. This is divided into a number of compartments or boxes of varying sizes each of which contains either a number of one particular letter of the alphabet or punctuation marks signs figures spaces &c. These letters are picked up from the case by the compositor with the thumb and forefinger of the right hand and placed in a metal tool called a *composing stick* held in the left hand and from which the letters in the form of lines are taken and placed upon a long shallow tray with flanges called a *galley*. The spaces shaped like type but somewhat shorter are placed between words. The lines of movable type are ultimately made up into pages of a book of a particular size and placed inside a steel frame called a *chase* and the type locked up—the made portable by means of a system of wedges making the form of type suitable for setting from a machine.

Between the setting up of type and the actual printing there are several important operations to be performed such as reading—a most responsible task—the reader's position usually being held by a man of wide learning and practical experience. There are also the making and re-*lining* of the readers and authors' corrections, and finally the arranging or *imposing* of the pages in such a way that when the sheet is printed on both sides and folded the pages will fall in proper sequence and with correct margins.

After the number of copies required have been printed the type is distributed—i.e. each letter or space is put back into its respective box by the compositor so that the type may be used over again. In this work great care has to be exercised to prevent the letters getting into the wrong boxes or as the printer would say *losing* the case.

We live in a mechanical age and mechanical science has made great advances in connection with Printing during the past 50 years. In setting up solid matter such as newspapers and books composing machines are used to a large extent. Of these there are various styles which can be divided into two classes, those which cast a solid line of type called a *slug* and those which produce as in hand composition a line made up of separate letters.

The compositor on the composing machine is called an *operator*. He manipulates a keyboard similar in

appearance to that of a typewriter the keys of which when depressed set certain mechanism into operation, ultimately producing lines of type spaced and ready for printing either in solid lines as with the *Lino*type or in *ter*type or in single letters as produced by the *Monotype*.

MACHINE PRINTING

When the forms of type and illustrations have been sent to press a large amount of work and skill is demanded of the pressman or machine manager before the results are obtained which enable even a novice to recognise that the book or the piece of printed matter he is handling is an example of good craftsmanship. There is an indefinable charm about a well-printed page. Hours, and sometimes days of what is called *making ready* may be spent on the machine to produce an even clear solid and sharp impression from the forms. Particularly is this the case when printing illustrations. The printer has to adjust the weight of pressure to suit the different tones in the plate so that the tone values of the original design will be retained throughout the printing of a large edition. This is done by cutting out on sheets of paper the parts which print too heavily and patching up those which require to print solidly by the use of papers of varying thicknesses and pasting them together forming what is called an *overlay*. This is fixed on the platen or cylinder of the machine in such a way that it corresponds exactly with the forms and the impression is made. This work requires a high order of intelligence and skill and much experience.

When the make ready is completed the machine is set to suit the job. Ink suitable for the work is placed in an adjustable trough called a *duct*, which is regulated by means of screws so that an even and sufficient supply of ink is automatically maintained and carried to the forme by means of a system of rollers throughout the run of the job which may last for a day or even for weeks. On an average something like 9,000 sheets of a school book will be printed in a day but during the printing great care has to be exercised and a sharp look-out kept for letters breaking off or for something (such as a space between words which should not print) working up and spoiling the appearance of the work.

There are many kinds of printing machines too numerous to mention, varying from those which give a flat impression such as the hand press and platen machines to the large cylinders and rotaries which produce books and daily newspapers. The various styles of machines are capable of printing anything from a few hundred up to about 500,000 copies per hour.

BLOCK MAKING

A reference as to how illustrations are obtained may not be considered out of place in this tabloid article. The artist's drawing, photograph or design is photographed by a particular process (sometimes through a screen representing a number of minute dots which can be seen if a print from a half-tone block is closely examined). The process negative is then photographically printed on to a sensitised piece of metal which when developed is subjected to the action of certain acids which etch or eat away the metal not protected by the photographic image. After varying degrees of etching the image is left standing in relief providing a surface from which the letterpress printer can print. These relief blocks when mounted on wood to bring them to type height are placed in a forme and printed at the same time as type.

Blocks for printing in colours are made very much in the same way but instead of employing one negative there are three each representative of one of the fundamental colours—scientifically designed and from these negatives blocks are made. Each block is printed in a different one of the three primary colours—yellow red and blue—and when the colours are printed on top of each other a reproduction of the colour tones approximating those in the original painting is obtained.

Printing is acknowledged to be one of the most important of our national industries. It is estimated that some 8,000 firms in the United Kingdom have invested over £30,000,000 in the business which gives employment to some 300,000 workers. Further it is the art which has educated the world and as a career for young men it provides considerable scope in its future development. There are great opportunities for men of education coupled with technical knowledge to become leaders who will influence the public to a fuller realisation of the commercial value of good printing, whether it be for newspapers, books or the larger and probably most important section—commercial job printing.

PAPER TRADE INDUSTRY.

By H P STEVENS, M.A., FIC

RAW MATERIALS.—The raw materials used in the British Isles for the manufacture of paper consist of (1) vegetable fibres derived chiefly from wood esparto, rags and straw recently even sawdust has been utilised, (2) soda lime and bleach ing powder for the purification of the fibres (3) resin, glue gelatine and starch for sizing and giving a finish to the paper (4) loading materials such as china clay chalk gypsum, etc. to cheapen and render the paper opaque (5) colours such as ultramarine, coal tar dyes the former being used chiefly to counteract the natural yellow tinge in the manufacture of white papers and (6) waste papers. The manufacture of paper also requires coal for steam raising and a very ample supply of good water

Rags which once supplied the bulk of the paper-makers raw material are now used for high grade papers only, and Great Britain is dependent on its Colonies and on foreign countries for the supply of the great bulk of vegetable fibres. Of these wood pulp is the most important. In normal times this comprises four fifths of the amount of our imports of fibrous materials

Wood pulp is of two varieties—mechanical wood pulp and 'chemical' wood pulp. The former predominates and consists of wood grown to pulp in a stream of water the latter consists of wood disintegrated by chemical processes and fetches two or three times as much as the mechanical pulp. The wood used is mostly coniferous (spruce fir) and therefore derived from countries with temperate or cold climates Norway and Sweden supplied the bulk of our requirements. Wet mechanical pulp comes mostly from Norway—although Canada now runs the latter close-bleached chemical pulp mostly from Norway and unbleached from Sweden. There are ample reserves of wood in Canada and Newfoundland to supply all British requirements

Esparto is imported in the raw state and converted into pulp in English mills. It is mostly derived from Algeria, the remainder from Spain and parts of the North Coast of Africa. Imports have shown a considerable increase but even at the end of 1922 had not regained pre-war figures.

Rags are largely imported. The present figures show a decrease in value as with other raw materials

The following figures give the imports of fibrous raw materials for the three years 1920 1921 and 1922

Description	1920 Tons.	1921 Tons.
Mechanical Wood Pulp	588 989	572 051
Chemical Wood Pulp	155 220	218 777
Esparto	162 839	73 434
Rags	12 406	9 149
Other Materials	6 682	1 466
Totals	1,275,802	874 797

IMPORTS AND EXPORTS OF PAPER.—For our purpose the term 'paper' must be held to include not only printing writing and wrapping papers but also paste board, cardboard mill board, straw boards and many specialities

As regards imports Norway and Sweden supply us with the greater part of the cheaper kinds such as news and wrapping papers while Germany's exports of paper to this country such as packings wrappings tissues and coated for 1922 are double those for 1921, and the value over 50 per cent. more

During 1922 both imports and exports show large increases in quantity. During 1921 the reverse is the case

Figures for 1923 are not yet available

The following figures give the quantity and value of

the British imports of paper and boards during the last three years—

		IMPORTS			
		1920	1921	1922	1923
Tons.	Tons.	Tons.	£	£	£
647 363	339 128	553 584	30 522,181	11 601 308	12 374 275

Two thirds of these quantities and one third of these values are accounted for by straw boards manufactured in countries where straw is plentiful. The feature of the 1922 imports is the recovery in quantities to the 1920 figure although the value is little altered. Great Britain is estimated to produce about 11 per cent of the world's output of paper and Canada 3 per cent. The United States is by far the largest producer. The British exports of paper for the last three years are given in the following table—

		EXPORTS			
		1920	1921	1922	1923
Tons.	Tons.	Tons.	£	£	£
117 622	73 249	122,751	12 817 869	7 706 444	6 737 289

MANUFACTURE OF PAPER IN THE BRITISH ISLES.—There are 231 paper and cardboard mills in England, sixty-one in Scotland and seven in Ireland. Wood pulp is only manufactured at two mills. There are thirty seven paper mills in Canada and a large number of wood pulp mills. Some Canadian mills combine the manufacture of both wood pulp and paper. In Newfoundland there are two large establishments one producing wood pulp and paper and the other wood pulp only. There are seven paper mills in Australia, three in New Zealand and eight in India. Official statistics of the paper output in Great Britain and Ireland were furnished in 1907 for the Census of Production—

Paper—	United Kingdom Quantity Tons	Value £
Paper for Writing and Drawing and for Envelopes	124 250	3 085 000
Paper for Printing and for Posters, etc	438,050	5 590 000
Packing and Wrapping Paper: Biscuits etc	181 860	1 943 000

ALFRED HOLT & CO.,

INDIA BUILDINGS, WATER STREET, LIVERPOOL

In the early part of the 18th century numerous inventors propounded schemes for applying steam power to vessels to be run upon rivers and canals. A chronological list from 1707 to 1858 is given below

For the establishment of lines from 1861 to 1888 and for further information see WHITAKER'S ALMANACK, 1913 edition, including the Evolution of the Steamship in the North Atlantic

In 1824 ocean trade was then carried on with sailing ships, mostly under 500 tons each and all the steamboats in the United Kingdom only numbered 109

As the size of steamships increased the heavy cost of construction necessitated the establishment of Corporations with great strength of capital which control the principal ocean routes (see page 961)

In 1814 the steamboats of all kinds registered in the United Kingdom amounted to less than 1,000 tons, increased to nearly 8,000 tons by 1860. There were 766 British steamers afloat in 1838 in all just short of 150,000 tons. The invaluable Register Book which is published by the Committee of Lloyd's Register of British and Foreign Shipping shows that on June 30, 1903 the steamship empire builders of Great Britain owned 10,164 vessels, at 695,074 gross tons, exclusive of 971 ships (363,038 tons) belonging to the dwindling disciples of time honoured canvas. The total for the world was—Steam, 6,335,373 tons and sail 2,830,865 tons

Owing to recent inventions passengers enjoy greater immunity from accidents the majority of passenger steamers being now fitted with installation of wireless telegraphy and with submarine signalling apparatus

FIRST STEAMBOAT'S PIONEER SAILINGS AND EARLIEST LINES

1707 Denis Papin experimented on River Fulda with paddle wheel steamboat

1736 Jonathan Hulls patented designs similar to modern paddle boat

1769 James Watt invented a double acting side lever engine

1783 Marquess of Jouffly made experiments in France

1785 James Ramsey, in America propelled a boat with steam through a stern pipe

1785 Robert Fitch in America propelled a boat with canoe paddles fixed to a moving beam

1787 Robert Miller, of Edinburgh, tried primitive manual machines

1788 Miller, with Synington produced a double hull stern wheel steamboat

1803 Charlotte Dundas, the first practical steam tugboat, designed by Synington

1804 Phoenix, screw boat designed by Stephens in New York, first steamer to make a sea voyage

1807 Clermont first passenger steamer continuously employed built by Fulton in U.S.A.

1812 Comet first passenger steamer continuously employed in Europe, built by Miller in Scotland

1818 Rob Roy, first sea trading steamer in the world built at Glasgow

1819 Savannah, first auxiliary steamer paddle wheels, to cross the Atlantic, built in New York.

1821 Aaron Manby first steamer (English canal boat) built of iron

1823 City of Dublin Steam Packet Co was established

1824 General Steam Navigation Co was established at London

1824 George Thompson & Co (Aberdeen Line) were established

1825 Enterprise made the first steam passage to India

1825 William Foxwell, pioneer steamer of the P & O S.N. Co

1830. I. & J. Harrison (Harrison Line) were established at Liverpool

1832 Elmhurst, iron steamer, took a private exploring party up the Niger

1834 Lloyd's Register for British and Foreign Shipping established

1835 F. Green & Co established at London

1836 Austrian Lloyd Steam Navigation Co. established at Trieste

1837 Francis B. Ogden first successful screw tugboat fitted with Ericsson's propeller

1838 Archimedes made the Dover Calais passage under two hours fitted with Smith's propeller

1838 R. F. Stockton, built for a tugboat fitted with Ericsson's propeller sailed to America

first iron vessel to cross the Atlantic first screw steamer used in America

1839 Thames, pioneer steamer of the Royal Mail Steam Packet Co

1839 George Smith & Sons (City Line) were established at Glasgow

1840 Britannia, pioneer steamer of the Cunard Line

1840 Chile pioneer steamer of the Pacific Steam Navigation Co

1845 Great Britain first iron screw steamer precursor of modern Atlantic steamer

1845 Thos. Wilson Sons & Co Ltd (Wilson Line) established at Hull

1847 Pacific Mail Steamship Co established in America

1849 Houlder Brothers & Co established at London

1850 Bullard, King & Co (Natal Line) established at London

1850 Messageries Maritimes de France established

1850 Inman (now American) Line established at Liverpool

1851 Teber, first steamer of the Bibby Line established 1851 at Liverpool

1852 Forerunner, pioneer steamer of the African Steamship Co

1853 Union Steamship Co was established (now Union Castle Line)

1853 Borussia, first steamer of the Hamburg American Packet Co established 1847

1854 Canadian, first steamer of the Allan Line, established 1850

1854 Donaldson Bros established at Glasgow

1854 British India Steam Navigation Co was established

1855 Tempest, first steamer Anchor Line

1857 Waldeman first steamer of J. T. Kennie, Son & Co (Aberdeen Line)

1858 Bremen, first Atlantic steamer of the Norddeutscher Lloyd, established 1856

1858 Great Eastern launched into the Thames, Jan. 31, commenced, May 1, 1854.

1858 British and African Steam Navigation Co., Ltd., established at Liverpool

The LATEST EDITIONS of Charts, Plans, and Sailing Directions published by the Hydrographic Dept of the Admiralty can be had from

J. D. POTTER, Admiralty Agent for Charts and Publisher of Nautical Books, **145, Minories, London, E. 1**

Official Catalogue of Admiralty Charts, Plans, and Sailing Directions, a vol of 830 pp, with 45 Index Charts (gratis).

On the Correction and Use of Charts, Light Lists, and Sailing Directions, a vol of 40 pp, royal 8vo bound red cloth (gratis)

You'll find it in "Whitaker."

Every "well found" Passenger Ship carries a Library.

It is a commonplace to say that no reference library is complete without "Whitaker." One can go much further and remark that a great many people find the Almanack a reference library in itself. There is nothing to equal it, either in conception or in the completeness and care with which it is put together and kept up-to-date — *The Times*

"Whitaker" is a Library in itself.

PUBLIC SCHOOLS' SCHOLARSHIPS.

KING'S SCHOOL, CANTERBURY.

Scholarships are offered for competition twice annually, in June and November. A King's Scholarship is tenable with an Entrance Scholarship, so that a boy may at entrance win scholarships to the value of £55 15s a year for five years. Full information from HEADMASTER, KING'S SCHOOL, CANTERBURY.

DOVER COLLEGE.

Three Entrance Scholarships for Boarders are awarded in July, value £40, £30, and £20, one of each. The Common Entrance Examination is used as a Preliminary Test and selected Candidates are asked to do higher papers. The examination can be taken at the Preparatory School.

EXETER SCHOOL, EXETER.

Entrance Scholarship Examination July 3rd and 4th, 1924. Four Scholarships, £40-10, may be offered, and one Honour Scholarship of £40 for the Sons of Officers who have fallen in the War. University Endowment, £200 a year. Apply to THE HEADMASTER, EXETER SCHOOL, EXETER.

SEDBERGH SCHOOL.

Entrance Scholarship Examination in May or June in London, after preliminary test at Preparatory Schools. Ten Scholarships (£100 to £40) are offered. House Exhibitions may be awarded to deserving candidates. Apply to the BURSAR, SEDBERGH SCHOOL, YORKS.

UPPINGHAM.

An Examination will be held in May or June, 1924, for about Eight Open Scholarships, varying from £85 to £30 per annum. Allowance is made for age, but a candidate must be under 14 on May 1st, 1924. Apply to THE BURSAR, OLD SCHOOL HOUSE, UPPINGHAM.

KING'S COLLEGE SCHOOL, WIMBLEDON COMMON, S.W.

An examination is held each Summer Term. Candidates for Senior Scholarships must be under 16, and for Junior Scholarships under 14, on May 1st. The value of the Scholarships depends upon the Standard attained, but never exceeds the amount of Tuition Fees (£39 per annum). See "Public Schools' Year Book."

EDUCATION.**MESSRS. GABBITAS, THRING & CO.,**
36, Sackville Street, Piccadilly, W., Tel 4826
Regent

have a department specially organised for advising Parents and Guardians as to the best Educational Establishments for Boys and Girls in the United Kingdom or on the Continent. The Firm have had experience as Educational Agents for fifty years, and during their long career have been instrumental in sending Masters and Tutors to the leading Schools and Tutors' Establishments, and are in the closest touch with all educational matters. They can give, FREE OF CHARGE, to the Parent or Guardian information and advice as to—

SCHOOLS FOR BOYS OR GIRLS TUTOR'S**ESTABLISHMENTS EDUCATIONAL HOMES****DOMESTIC ECONOMY, AGRICULTURAL AND****SECRETARIAL COLLEGES**

**EITHER AT HOME
OR
ABROAD**

To enable the Firm to advise efficiently it is necessary that full particulars should be given, especially as to the age of the Pupil, previous education, and present standard of attainments, special subjects of study, locality, whether a large or small establishment is preferred, and the fees it is intended to pay.

The Firm also can assist in procuring the services of Private Tutors and Governesses, Resident, Travelling, Non Resident or Visiting, of whom they always have a large number on their List.

Transfers of and Partnerships in Boys' and Girls' Schools are also negotiated. Masters, Tutors, and Governesses seeking Posts can have a Prospectus on application, free of charge.

ST. LEONARDS-ON-SEA.**SCHOOL FOR DEVELOPMENT OF BACKWARD, NERVOUS,
AND EXCEPTIONAL PUPILS**

WHO CANNOT BE TAUGHT WITH ADVANTAGE IN ORDINARY BOARDING SCHOOLS

Expert health and educational treatment. Temperamental difficulties studied, remedial exercises, &c. There is a kindergarten department. Particulars from—

BATH.

The Medical Officer of Health writes — "Bath City and County Borough Health resort, Somerset Pop 68,662. Only Hot Springs in British Isles. Most perfectly equipped modern bathing establishments in Europe. Extensive Roman remains. Subsoils, freestones, clay, sand and gravel. Elevation, 60 to 750 feet. Climate where sheltered similar to southern marine climates where exposed, good range of temperature and bracing winds. Sunshine (1922)—2,405 hours. Water supply, pure and abundant springs. Bath stands alone in Great Britain as a City of considerable size, and much reputation, the beginnings of which have been determined by the existence of Thermal Springs. Traditions assert that the first discovery of the Spring and acquaintance with their healing virtues were made in primitive times before the advent of the Romans — Vide *Climate and Baths of Great Britain and Ireland* [See p. 100* for HOLIDAY GUIDE]

BOYS.

* Founded 1844.

FOLKESTONE.

The Medical Officer of Health writes — "Aspect, S & S E. The town is one of the best-planned seaside resorts. The comparatively very healthy and dry climate is due to the porous nature of the geological formation and, in addition, the facilities for drainage make mists, damp and fogs almost unknown. The sanitation of the town is carefully guarded, and precautions taken from time to time to maintain its efficiency for an educational centre it is particularly adapted. A fashionable holiday resort, residential town, and cross Channel packet station close to Shorncliffe camp one and a half hours from London modern Folkestone stands on a lofty cliff on the Kentish coast facing the Straits of Dover. Sunshine (1922), 1,754 hours.

BOYS AND GIRLS

ELLALAND.

HOME SCHOOL FOR CHILDREN

Principal - Miss EDITH AUKLAND

Premises situated on Cliff, in own grounds, with beautiful surroundings.

Both Boys and Girls received. The children lead a happy, regular and, as far as possible, outdoor life.

Training throughout on Froebelian principles, Health and Happiness chief consideration.

Entire charge taken of children from India and Colonies, the general climate being especially suitable.

Physical Exercises, Games, and Daily Walks.

Fees — From 50 guineas per annum.

MALVERN

(Worcester) The Medical Officer of Health writes — "Malvern is picturesquely situated on the eastern and western slopes of the range of Malvern Hills with extensive and magnificent views on both sides. The hills, which rise to an altitude of 1400 feet are easily accessible for delicate persons either on foot or by carriage. The climate has a most beneficial effect on invalids. The houses are so placed as to receive more than the ordinary amount of sunshine. Weekly children especially those suffering from tubercular glands or continually recurring catarrhs, in nearly all cases do remarkably well here. The rainfall is low, and the soil dries with remarkable rapidity. The water supply is plentiful and of great purity and the sanitary state of the district generally of a high standard. The average annual death rate is 10.5 per 1,000 of the population. Outbreaks of infectious diseases are few and quickly suppressed as the Urban Council are provided with every means for promptly dealing with any case that may arise." Pop 17,869. [See p. 1020 for Holiday Guide]

"WESTGATE-ON-SEA."

A small town of modern foundation situated $1\frac{1}{2}$ miles from and to the west of Margate, originally intended, and hitherto exclusively developed, as a seaside resort for the upper classes desirous of obtaining all the climatic advantages for which Margate is noted. The sea walls form two promenades over a mile long, steps giving access to the beach (sandy). There are gardens with walks at different elevations giving protection from winds. Marine drive for two miles along the top of the cliff. Safe bathing. Modern drainage, excellent water supply.

Pop. 3,538

See p. 1028 for HOLIDAY GUIDE.

C B Pop 39,183 50 miles from London L M & S Railway A noted educational centre on the banks of the Great Ouse, with charming riverside promenade Golf Links (18 holes) (See p 982 for SCHOOLS)

THE PRINCIPAL HOUSE AGENTS FOR BEDFORD AND COUNTY W and H PEACOCK, 84, High St, Bedford (Telephone, No 115) The Bedford Illustrated Property Register contains Map, school fees 50 views and photos of houses Post free Weekly Sales Auction Rooms, Lime St. Auction Mart, Horse Lane

BEXHILL,

SUSSEX M.B. Pop. 20,263. Southern Railway 7½ miles from London, 4 miles from Hastings, 1½ miles from Eastbourne. Aspect—South. Climate—Dry, invigorating. Water Supply—Constant. Soil—Sandy. A modern select seaside resort, with good educational facilities. a Golf Links Public Park, 22½ acres. Excursions—Battle Abbey, 8 miles, Pevensey Castle, 7 miles. Hurstmonceux Castle, 20 miles.

The rapid growth of Bexhill is to be attributed to its bracing air and sunny climate and it has been found that the air possesses recuperative and stimulating qualities in a remarkable degree. It is one of the sunniest spots on the South Coast. fogs are practically unknown, while the soil is for the most part sandy, and dries quickly after rain. The excellent quality of the water is attributed to the Ashdown Green sands beneath the subsoil of the district.

DARTMOOR,

DEVON An extensive upland tract from Brixton to Okehampton, 22 miles long, 20 miles broad. Area—about 140,000 acres. Okehampton, Moretonhampstead, Tavistock, and Ivybridge indicate the four corners, and the G W Rly runs up to Princetown. Two bridges, 2½ miles from Princetown is a good spot to begin or end a tramp on the moor. The higher portions of Dartmoor are bleak, wild, and rugged, huge masses of granite culminating in fantastic peaks called tors, from 1,000 to 2,000 feet high. Hay Tor is one of the principal. Amongst the numerous places of interest are—Cranmere Pool, the source of the river Tavy; Dart Law, and Teign Widdicombe, with its perpendicular church and famous fair. Fingle Bridge, one of the most beautiful spots. Postbridge with its original Clapper Bridge. There are numerous British antiquities on Dartmoor consisting of menhirs, or long stones, circles and clain (or stone slab) bridges.

MALVERN,

WORCESTERSHIRE U D C 129 miles from London
 Pop 17,809 Means of Access—G W Railway and L M & S
 Railway Location—On the slopes of the Malvern Hills,
 8 miles from Worcester Elevation—300 to 900 feet above sea level Climate—Dry and bracing.
 Water Supply—Pure, constant Drainage—Modern Soil—Gravel Season—Summer and winter
 Sunshine (1922), 1,571 hours Annual Fixtures—Shakespeare week in May, Croquet and Lawn Tennis
 tournaments in May and June Malvern is an inland watering place, important educational
 centre, and a pretty residential town, consisting mostly of villas standing in own grounds. The
 highest point of the Malvern Hills is the Worcestershire Beacon, 1,400 feet high, from the summit
 of which is obtained one of the most extensive panoramic views in Great Britain, embracing the
 Severn and Wye Valleys, the Cotswold Mendip and Welsh hills, and in the plain below can be
 seen Droitwich, Worcester, Evesham, Cheltenham, Gloucester and the Bristol Channel

At Malvern a hermitage was endowed by Edward the Confessor After the Conquest it
 was changed into a Benedictine Priory Of the buildings, which date from 1083, there still
 remain the Abbey Gate and the Norman and Perpendicular church A Benedictine Priory was
 established at Little Malvern in 1172, of which the tower and chancel of the old priory church are
 preserved

WORTHING,

SUSSEX M B Pop. 35,224. Southern Railway 6½ miles from London. Aspect—South. Climate—Dry, mild, equable. Sunshine (1922)—1,781 ½ hours. Water Supply—Constant. Soil—Loam and marl. Beach—Safe level sands with plenty of shingle. A select seaside resort, residential town and winter haven for invalids, protected from the north by the South Downs, which rise in breezy uplands some little distance inland, its great charm being that it has developed into a modern seaside town without losing much of its rural aspect much foliage and sylvan surroundings. Homefield Park 16 acres (cricket tennis bowls). Steyne Gardens, 3 acres (promenade concerts). Broadwater Green Victoria Recreation Ground. Golf links (two 18-hole courses). Hunting, boating, fishing. Places of Interest—Arundel (10 m.), Bramber Castle (9 m.), Goring Woods (3 m.), Broadwater (1 m.), 13th Century Church, Chantebury (7 m.) (800 ft.), Cissbury, and other remains of Roman encampments.

Worthing is noted for the equability of its climate which is largely due to its geographical situation. The proximity of the sea and the shelter afforded by the South Downs combine to modify the climate and avoid extremes. The absence of hills enables convalescents to take exercise without exertion, and so derive the greatest benefit from the high percentage of ozone in the air and the large amount of sunshine.

EXPRESS SERVICE (PULLMAN CARS) to LONDON, 76 minutes.

£53,000,000
£7,800,000

The A M P Society's premium rates are lower than the average, it distributes its whole divisible surplus annually among its policy holders, it values its liabilities on the most stringent basis and it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience Those who desire to obtain their life assurance cover at the lowest net cost, with perfect security, are invited to investigate these claims

EVERY YEAR A BONUS YEAR.

DOUBLE YOUR INCOME

ELIMINATE RISK

Every person whose income is derived from investments knows how harassing is the anxiety entailed by the constant rise and fall in their value

You can get a guaranteed income for life if you purchase a Canada Life Annuity. It is humanly speaking equivalent in safety to a Government pension. It cannot shrink. What you contract to get is paid you punctually. And you get a much larger income

FOR INSTANCE

A man of 62 who takes out a Canada Life Annuity for £1,000 gets a yearly income of £106 3s 2d. A woman of 64 gets a yearly income of £100 18s 0d. for the same investment

OVER 10% PER ANNUM.

Other ages pro rata, on equally generous terms. You can invest any amount from £1.00. The Assets of the Canada Life Company are £18,000,000 and are under direct Government supervision. Write at once for full particulars to the Canada Life—the oldest Colonial Life Assurance Company and the office that gives the best value for Annuities.

Write to night (stating age) to Annuity Department,

CANADA LIFE ASSURANCE CO.

FIRE BONUS POLICIES

Many thousands of pounds have been returned to Insured by way of Bonus since 1908
The "General" is the only Office transacting business under such a large and extensive
Fire Insurance Bonus Scheme.

Bonus Policies are issued for all Insurances on Dwelling Houses and Non hazardous
Properties and also all Household Insurances on Furniture &c

The Scheme is particularly attractive to those who have paid Fire Premiums year after year
without having made a claim, and who naturally look for some reduction by way of Bonus

THE LATEST IMPROVEMENTS IN LIFE ASSURANCE

- 1 **AUTOMATIC REPLACEMENT** of the ASSURANCE when it matures without further payment of premium or Medical Examination Thus when a Policyholder receives, say, £1000 cash after 25 years, the assurance is replaced by another £1000 without further charge Thus securing £2000 in all
- 2 **GUARANTEED ADDITIONS** of £2 10 0 per cent per annum if death occurs within the 25 years
- 3 **Guaranteed Surrender Values** ranging from 75% to 120% of the tabular premiums, excluding the first year's Large Loan Values

Policies are issued for larger or smaller amounts and for other terms of years

APPLICATIONS FOR AGENCIES INVITED

WHY BE CONTENT WITH 5%?

You can get a Guaranteed 7%, 10%, 15%, or even 20%, according to Age.

WHY deprive yourself one day longer than necessary of comforts which this larger income will provide for you? Why run the risk of a further depletion of your Capital and a further loss of Income? Why not make your Income *surer* as well as larger, and thereby enjoy contentment of mind with its beneficial effect on your health?

Do what many others are to day doing—sell your stocks and shares and buy a "Sun Life of Canada" Annuity with the proceeds. A retired professional man has just doubled his income by making this safe exchange. This "*two years Income in one*" will be paid to him every year as long as he lives. It will never fail. No more worry, no more wondering how to make ends meet. Life is now a different thing for him.

Think what it would mean to you—a far *larger* Income, an absolutely *safe* Income, an *unalterable* Income for Life, Guaranteed by a Company with over £40,000,000 assets under very strict Government supervision.

Write for full details of our Annuities, so that we can show you how much better you can employ your capital, what a much larger income you can enjoy, and how much safer it will be. *Better terms are granted in cases of impaired health*, and there are many kinds of annuities, including a *guaranteed return of Purchase Price*. Please give exact date of birth and amount of capital at your disposal.

FOR YOUNGER MEN AND WOMEN

£250 a year for life, commencing, say, at age of 60

A deferred annuity, purchased by easy yearly instalments, and to commence when the annuitant wishes to retire—say at 60 or earlier—solves the problem of providing for old age. Meanwhile it protects the family, for £3000, £2000, or whatever amount is agreed upon will be paid to them should the Policy holder not live to qualify for the annuity. This is a wonderfully advantageous Plan—the biggest step you can take towards financial independence. Thrift without sacrifice! Let us explain it more fully to you. Write, giving exact age and amount you can save yearly, to J F Junkin (Manager), Sun life of Canada, 20 Canada House, Norfolk Street, London, W C 2.

The Society exists for the purpose of supplying the means of Grace to our fellow countrymen abroad, especially in those pioneer parts of the Empire where they are in danger of drifting into irreligion for lack of the Gospel.

Many Colonial Dioceses receive aid from the Society including those in Western Canada, Australasia, British East Africa, and India. Many Colonial Bishops are applying for far more aid than the Society's Funds can meet.

306 Clergy and Lay Evangelists have been sent out.

Assistance is also given to ministrations among British Artisans Sailors, and others in Continental Cities, and Services (self supporting) are organised for visitors at health resorts.

Treasurer	-	-	-	R L BARTLEY, Esq CBE
General Secretary	-	-	-	HFRBERT LANKESTER, Esq, M D

In 1922 in C.M.S. Missions there were 47,204 baptisms of which 27,356 were adult

In the C.M.S. fields of service, viz Africa India, China Japan Persia and Palestine the very success of the work is often a menace For instance at Owerri and Okigwe (in Nigeria) 18 years ago there were no Christians, to day there are 21,000 adherents, with 14 African Christian workers

In a certain district in North India 41 years ago there were only two Christians since then 3,289 persons have been baptized, and there are now 44 congregations in that district with four churches The 14 village schools are self supporting, and there are 60 children in the two homes for the untainted children of lepers

From China come reports of growing congregations, of increased numbers of children in the schools, of Chinese Christians themselves taking a fuller part in the work of preaching the Gospel—and yet, the budding plans for a new girls college in South China must be cut down by one third owing to lack of funds What is to happen to the girls of the waiting list?

During the past year 329,423 scholars attended the 5,076 C.M.S. institutions, colleges and schools and the mission hospitals received 49,166 in patients, and 791,644 visits from out patients

THE C.M.S. HAS A RESPONSIBILITY TOWARDS THOSE WHO HAVE BEEN BROUGHT INTO TOUCH WITH CHRIST THROUGH THESE AGENCIES THE C.M.S. CLAIMS THE HELP OF THE CHURCH TO DISCHARGE THIS RESPONSIBILITY

THE DOGS' HOME

OR TEMPORARY HOME FOR
LOST AND STARVING DOGS

(An Institution for the Protection of Dogs & Cats)

4, BATTERSEA PARK ROAD, S W 8

and HACKBRIDGE, SURREY

(For Boarder and Quarantine Dogs Only)

Patron

His Most Gracious Majesty the King

President

His Grace the Duke of LORLAND, K.G.

OBJECTS

1. To provide food and shelter for the lost, deserted, and starving dogs of London and the immediate neighbourhood
2. To restore lost dogs to their rightful owners
3. When good dogs are unclaimed, to find suitable homes for them at nominal charges
4. To destroy, by a merciful and painless method, all valueless and diseased dogs

Out-Patients (Dogs and Cats only), at Battersea, Thursdays, 3.0 p.m.

Since the Foundation of the Home in 1860, over 1,330,000 dogs have received food and shelter

Dogs and Cats can be received as Boarders at Hackbridge, and Dogs for Quarantine under the Importation of Dogs Order, 1914

Contributions will be thankfully received by

G. GUY S. ROWLEY, Secretary (150)

THE CANCER HOSPITAL—FREE

(FOUNDED 1851 INCORPORATED UNDER ROYAL CHARTER)

FULHAM ROAD, LONDON, S.W. 3.

The only Special Hospital in London for the treatment of Cancer, Tumours, and Allied Diseases.

A special refuge for poor persons afflicted with this fearful disease, who are admitted free without letters of recommendation

A number of beds are provided for the use of Patients who may remain for Life

THE GORDON BOYS' HOME

(THE NATIONAL MEMORIAL TO GENERAL GORDON)

Patron—THE KING

Vice Patrons—H.M. THE QUEEN and H.M. QUEEN ALEXANDRA

THE HOME IS SITUATED AT WEST END WORKING NEAR BROOKWOOD

The Home is constructed to accommodate 250 Boys chosen from the homeless and destitute between the ages of about 14 and 18 and give them a training up to the age of 17 or thereafter which will fit them for civil life in this country or its Colonies and for service in the Army Navy or Mercantile Marine.

CONDITIONS OF ADMISSION—1 The age for admission is from about 14 to 18 years. 2 A boy must in the opinion of the Committee be really necessitous. 3 He must be free from such physical or mental infirmity as would disqualify him for service in the Army or Navy or for civil employment in the Colonies or elsewhere which would require active bodily exertion. 4 Boys of known bad character are ineligible.

Free admission is given to such number of boys as above as can be provided for out of the general income of the Home. A guaranteed payment of £15 annually during his stay at the Home will give a right of nomination for a lad fulfilling the conditions of admission. Subscriptions and Donations are urgently needed in order that the above number of boys may be maintained.

Subscriptions are received by THE WESTMINSTER BANK LIMITED 1 St James's Square S.W. by the Treasurer General the Right Hon. Sir DUNCAN PRICHARD C.B. Mailbrough House S.W. and by the Commandant at the Home from whom any further information can be obtained. For financial reasons the London Office has been abolished.

COMMANDANT—MAJOR SIR T. S. LANLEY BART

GENERAL LYING-IN HOSPITAL,

York Road, Lambeth, S.E. 1.

ESTABLISHED 1765

Patrons—H.M. THE QUEEN and H.M. QUEEN ALEXANDRA

This Hospital is situated in one of the poorest parts of London, in the district South of the Thames, with a population of nearly two millions.

Married women in indigent circumstances, especially the wives of Soldiers and Sailors, and certain single women (with their first child, after investigation by the Committee), are admitted to the Hospital from all parts of the kingdom but mainly from the immediate neighbourhood, from which, owing to its poverty, little pecuniary help is obtainable.

Subscriptions and Donations thankfully received by the Treasurer or Miss ROSE F. WHITE the Secretary at the Hospital [146]

THE HOSPITAL FOR DISEASES OF THE SKIN,

Telephone Hop 1021

70-71 BLACKFRIARS ROAD, S E

ESTABLISHED 1841

Patrons—HER MOST GRACIOUS MAJESTY QUEEN ALEXANDRA
Treasurer—THE Rt Hon THE LORD MORRIS P C K C M C

This Hospital is the oldest in London specially devoted to the study and treatment of diseases of the skin. It is thoroughly equipped with the most modern therapeutic appliances.

Unfortunately, the present position of the finances of the Hospital will not permit the re-opening of the In Patient Department, which was closed owing to lack of funds. Donations and more Annual Subscriptions are urgently desired.

The practice of the Hospital is open to all qualified medical practitioners and senior students. Since the foundation of the Hospital in 1841 over 545,000 patients have been treated.

Patients are required to contribute towards the funds of the Hospital according to their means and should attend daily at 1.30 p.m., or on Fridays at 6 p.m.

FREDRICK HAYTER *Secretary*

[152]

LONDON CITY MISSION

Instituted 1835.

240 Agents Employed.

The Society exists for the social and spiritual uplift of the millions of London chiefly the poor and the citizen classes. Besides preaching the Gospel from house to house and in Hospitals and Poor Law Institutions, the Missionaries visit the great centres of industry—Government works, docks and wharves, rail and goods yards, public offices, and wherever the masses foregather either for business or pleasure—teaching the principles of righteousness and truth and urging their application to daily life and conduct.

£1,200 required week by week for the maintenance of the Society's daily operations among the poor and working classes of the Capital. Your help will be gratefully received.

Suppose for a moment

that a little child of your acquaintance was suddenly orphaned, with no legacy but friendlessness, destitution and distress

Would you, could you, turn away from that orphaned child with cold indifference, willing to let it drift no one knows whither? No, of course, not! Such callousness is unthinkable

We, who have cared for orphans for nearly 166 years, know many such children and they are waiting for admission into our school at Haverstock Hill, where 7,000 orphans have been maintained and educated since the year 1758

The particulars of some of the cases are very, very pathetic indeed, and in every case there is this deep abiding pathos—each child is fatherless! The whole future of these little ones is at stake. We dare not take the responsibility of ignoring the appeal of their great and urgent need. We want to act in the place of parents who are dead, and to do that we have to appeal for your help. Will you give it?

SOCIETY FOR THE ASSISTANCE OF LADIES IN REDUCED CIRCUMSTANCES

Under Royal Patronage.

We have the poor always with us. By the poor I do not mean the indigent poor but those who would work if they could. There are many such who have fallen on evil times, and there are also the aged and feeble who need our loving sympathy, and who perchance need the tender help and comfort of those stronger than themselves.

Unless I can raise £4,000 quickly, not only must I refuse all help to "outsiders" but I must, alas, cease to help those who have been on our books for years.

Many Charities are suffering and I feel powerless, but I remember that man's extremity is God's opportunity. He is in Heaven, so all must be right with those who trust in Him. Let us therefore go forward in His strength. He will melt the stony hearts and open the closed purses, and all will yet be well once more.

Hon. Sec.: EDITH SMALLWOOD, Lancaster House, Malvern.

A safeguard to the house and its contents.

'ALL-IN' POLICY

*For HOUSEHOLDERS.
For HOUSEOWNERS*

Practically every important risk to the contents of the home is covered by the Household's "All In" Policy for a single annual premium of 5/- per £100 (Minimum Premium 7/6). The Houseowner's "All In" Policy covers the building for 1/6 per £100 per annum.

The "All In" Policies issued only by the British Dominions are recognised as affording the most comprehensive cover yet devised. Prospectuses sent on request to —

"ALL-IN" DEPARTMENT, 41, THREADNEEDLE ST, LONDON, E.C. 2

The married man's best policy **"ALL-IN" LIFE POLICY**

*For
Retirement
Dependants
Children
Education
Etc*

A policy that has the fourfold distinction of providing —

- (1) The cost of a good education for your children
- (2) An income for yourself on retirement
- (3) Remission of premiums during your total disablement or illness
- (4) Provision for your family in the event of your early death

In addition to all these benefits substantial rebate is allowed by the Income Tax Authorities in respect of the yearly payments

Every married man concerned with the welfare and financial security of himself and his family, should send for prospectus of the "All In" Life Policy which gives particulars of the attractive premium rates. Life Dept., 41, Threadneedle St., London E.C. 2.
